CHAPTER 1

INTRODUCTION

This book is the fifth in a series of studies regarding the genealogical history of the text of the Greek New Testament. Volume 1 provided the genealogical history of the Greek text of the Gospel of Matthew; this volume does the same for the Acts of the Apostles. The first volume provides an introduction to textual criticism, a review of the various textual critical theories and methodologies, a description of a genealogical theory of textual criticism along with its methodology. Readers not familiar with that volume should read at least the first four chapters of that study before going further, because this work presumes the reader has that informed background. What follows is a brief summary of those chapters.

Textual Criticism

Textual criticism is the branch of literary science which studies surviving copies of ancient literature¹ with the intent of determining the original form of a literary composition.² The problem is that surviving copies of a composition differ because of scribal errors accumulated during the copying history of the composition. At certain places in the text of a composition, existing copies may differ, one having this reading, another having that reading, and yet another having the reading originally written by the author. Such places are called places of variation, and such differing readings are called textual variants. Every place of variation has at least two textual variants.

Because every manuscript is a copy of some earlier copy (exemplar), intuitively one imagines the history of the manuscripts of a composition to be like a family tree. So initially textual scholars of classical literature took this approach with some measure of success. However, when it came to the text of the Greek New Testament, scholars despaired and regarded the genealogical approach as much too complex because of the large number of manuscripts and large number of variants. So, various theories and methodologies were developed to work with the variants at each

¹ Literature composed before the invention of printing, copies of which exist only in handwritten documents. A handwritten copy is referred to as a manuscript.

² The original text of a composition, that is, the actual words written by the hand of its author, is referred to as its autographic text.

place of variation to decide which reading is more likely original. But with the development of high-speed computers, the complex data processing is no longer a problem; all that is needed is a viable genealogical theory together with its associated programable methodology. That's where this project came on the scene.

The present genealogical theory is based on several known facts about the relationship of manuscripts and variant readings. (1) It is a fact that the variants in a manuscript consist of all the uncorrected scribal errors of its ancestral exemplars; this collection of variants may be regarded as the genealogical history of the manuscript, and may be likened to its DNA code. In addition, the variants introduced by the parent exemplar of a manuscript may be regarded as its sibling gene. So, every manuscript has its own DNA and sibling gene, and these data are recoverable from the manuscript database. (2) Sibling manuscripts may be identified by mutual sibling genes, or by greatest quantitative affinity,³ or by both. (3) Sibling manuscripts are daughters of the same parent exemplar the readings of which may be recovered from the consensus of its daughters' readings, except where no consensus exists. Sibling daughter manuscripts inherit all the readings of their parent exemplar except where their own scribes initiate a new one. In case of ambiguity (where no consensus exists), one variant will have been inherited and the other will have been newly initiated. Inherited variants have history and may be identified by the principle of delayed ambiguity,⁴ whereas newly initiated variants have no history and fail the test of delayed ambiguity. (4) A reconstructed exemplar may stand in place of all its descendants in the database, and function as their representative in that stage of reconstructing the genealogical history. (5) Iteration of the above steps will converge genealogical stemma into a single exemplar representing the autographic text. The actual methodology as described in the first volume is more complex than the above, but the above is sufficient to describe the basic principles.

The Problem of Mixture

Mixture occurred when a scribe copied from more than one exemplar. Critics of the genealogical method assert that mixture creates an irresolvable complication. But, as it turned out, as far as the reconstructing procedure is concerned, a reading copied from a secondary exemplar is

³ Quantitative affinity is a measure of how similar two manuscripts are to one another.

⁴ The principle of delayed ambiguity says that the inherited variant will be a reading of the grandfather exemplar when it develops.

no different than a variant newly initiated by the scribe either by mistake or intent. Both are uninherited from the primary exemplar; the only difference is that a newly initiated variant has no history, whereas a variant borrowed by mixture has a history, but a history outside the genealogical descent of the primary exemplar. So, mixture is not a problem for the reconstruction methodology described above. The sources of mixture in genealogical history may be of interest in some cases. A separate algorithm of the software finds the most likely source of every variant introduced by mixture rather than by scribal error or intent.

The Database Used

The database used in this project is derived from an expansion of the Nestle-Aland 27th edition of the *Greek New Testament*⁵ hereafter referred to as NA-27. The variations of the text are listed at the bottom of each page, providing the verse number where the variation occurs, the associated symbol indicating the kind of variation, the alternate readings that occur there, and a list of witnesses⁶ that contain the given alternate reading. The list of witnesses is provided in compressed form in order to avoid as much repetition as possible. This compressed form is useful for conserving paper and ink, and is relatively easy for scholars to follow. But the computer software must have every item of data explicitly recorded, that is, there must be a record of every witness to the text under study, and a record of which variant reading each witness has at every place of variation. This necessity requires the NA-27 database to be unpacked and expanded. Until recently the NA-27 database existed only in printed form, and expanding the data into the form needed by the genealogical software was a complex and time-consuming task.⁷ However, the database is now available in digital electronic form in the *Stuttgart Electronic Study Bible*.⁸ That form of the database is capable of being expanded and unpacked electronically.

The expanded database consists of two separate files, one containing a list of every witness together with its name, date, language, and content. The second file is a list of every place of variation in the NA-27 database, the chapter and verse number where the variation occurs, the

⁵ *Novum Testamentum Graece* (Stuttgart: Deutsche Bibelgesellschaft, 1997).

⁶ The witnesses consist of individual manuscripts, translations, and patristic quotations.

⁷ All my prior research with the genealogical software was done with data manually extracted from the already expanded database in the United Bible Society's *Greek New Testament*.

⁸ Christof Hardmeier, Eep Talstra, and Bertram Salzmann, *The Stuttgart Electronic Study Bible* (Stuttgart, Germany: The German Bible Society, 2004); used with permission.

Greek text of each variant at that place of variation, along with a list of witnesses containing the given variant.

The present program, called Lachmann-10 herein, is written in the Turbo Pascal 7.0 programming language intended for IBM compatible machines with extended memory. The size of the problems it can handle is flexible and is limited only by the amount of RAM available and the speed of the machine [up to a maximum of 2,000 variation units and 2,000 manuscripts]. Large problems require a reasonable amount of time to converge on a solution. The next chapter describes the genealogical history of the extant witnesses to the Greek text of the Acts of the Apostles.

CHAPTER 2

WITNESSES TO THE TEXT OF ACTS

The witnesses¹ to the text of the Acts of the Apostles used in this study are those derived from the electronic form of the textual apparatus of the NA-27 edition of the Greek New Testament as contained in the *Stuttgart Electronic Study Bible*² as edited and modified for the purposes of this project. They consist of 175 existing witness³ of various types:

(1) Papyrus manuscripts	16
(2) Uncial manuscripts	42
(3) Minuscule manuscripts	51
(4) Lectionary manuscripts	0
(6) Latin Versions	20
(7) Egyptian Versions	7
(8) Syriac Versions	2
(14) Greek Church Fathers	26
(15) Latin Church Fathers	11
(16) Printed Editions	8 ⁴

The witnesses to the text of an ancient document must have several characteristics before a reasonably reliable reconstruction of its genealogical history can be made. Among these are (1) number of witnesses, (2) date, (3) completeness, (4) limited variableness, (5) commonness of text, and (6) genealogical affinity. These characteristics of the available witnesses to the text of Acts are discussed below and are shown to be suitable for a reasonable reconstruction of its textual history.

¹ I use the term witness because the reconstruction of genealogical history derives evidence not only from extant manuscripts but also from ancient translations and quotations from church fathers. In addition, a few printed editions are involved although not for reconstruction purposes.

² Christof Hardmeier, Eep Talstra, and Bertram Salzmann, *The Stuttgart Electronic Study Bible* (Stuttgart, Germany: The German Bible Society, 2004).

³ Appendix A lists all the extant witnesses by name, date, language, content, number of readings, and percentage of completeness.

⁴ Four editions of the Latin Vulgate: vg^{cl}, vg^s, vgst, and vg^{ww}; Scrivener's TR; Hodges-Farstad HF; Robinson-Pierpont's RP; and NA27. These do not contribute to reconstructing the stemma.

Number of Witnesses

Contrary to the number of available witnesses to the texts of ancient classical literature, there are approximately 2,328 existing Greek manuscripts of the Gospels, including about 178 fragments.⁵ This does not include the witnesses of the ancient translations and church fathers. This study makes use of the 218 witnesses to the Acts of the Apostles recorded in the NA-27 apparatus which includes all the ancient papyri witnesses and most of the existing manuscripts dating before the ninth century and a good sample of those from later times. This number includes the consensus witness of the many manuscripts of the text used in the Greek speaking Byzantine churches together with a number of manuscripts related to the Byzantine text. Also, it contains the consensus witness of the many manuscripts of the Latin Vulgate and the individual witness of four different printed editions of the Vulgate. The various Old Latin translations also are represented by a consensus of a number of manuscripts of each of these individual translations. Consequently, the consensus witnesses bring many additional manuscripts indirectly into the reconstruction process. There is good reason to believe that there are sufficient witnesses to the text of the Acts of the Apostles to reconstruct its genealogical history.

Date

While it is possible to reconstruct the genealogical history of a text without the benefit of dates, dates are very helpful for accurately locating scribal activity in real history. The dates of the witnesses to Acts range from the second to the twenty-first centuries.⁶ Table 2.1 and its associated graph display the reasonably good distribution of the witnesses by date.

Completeness

Many of the witnesses are fragmentary, not all their text having survived the passage of time. Only 71 of the 218 witnesses have 96-100% of their text complete, and only 80 have a text 80% or more complete; thus, completeness is significant for this study. Table 2.2 and its associated graph display the distribution of completeness for the witnesses used in this study. Completeness is important for the reconstruction of the textual history, because the computer depends on minimal

⁵ Aland and Aland, p. 83.

⁶ The witnesses in the 19th to the 21st centuries are printed editions that do not contribute to the reconstruction of the genealogical history.

difference between witnesses to determine quantitative affinity. Consequently, the computer reconstructed the genealogical history on the basis of witnesses having at least 80% of their text complete; the more fragmentary witnesses are added to the genealogical tree where they best fit after the tree is constructed. The fragmentary witnesses are still important and should not be excluded from the study because they contribute to establishing fixed dates in the textual history.

Table 2.1:
Distribution of Extant
Witnesses by Century:

76-80	4
81-85	9
86-90	0
91-95	7
96-100	64

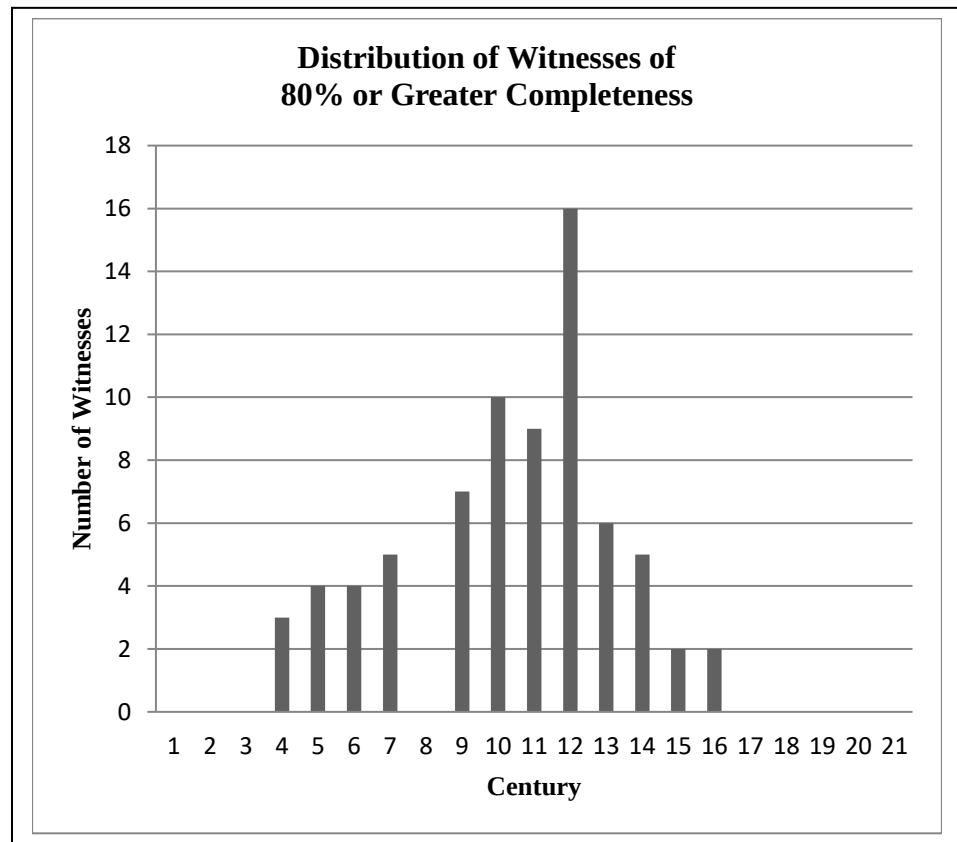

Because many of the witnesses are fragmentary, it is of interest to know the distribution of those witnesses having 80% or greater completeness. They are the ones that contribute to the reconstruction of the genealogical history. Table 2.3 and its associated graph display the distribution of these witnesses. It is evident that numerous contributing witnesses are from as early as the third century, so a reasonably good reconstruction can be expected.

Limited Diversity

The more diverse the text the more difficult the reconstruction of its textual history is. In the overall picture, all witnesses to Acts agree in over 90% of the text. The places of variation and the number of variants at those sites provide the data for reconstruction. However, even so, the number of places of variation and the number of variants constitute a limit to what can be reconstructed because of the magnitude and complexity of the problem. But modern technology has expanded that limit to where reconstruction is now possible for texts the size and diversity of Acts.

Table 2.3

19	0

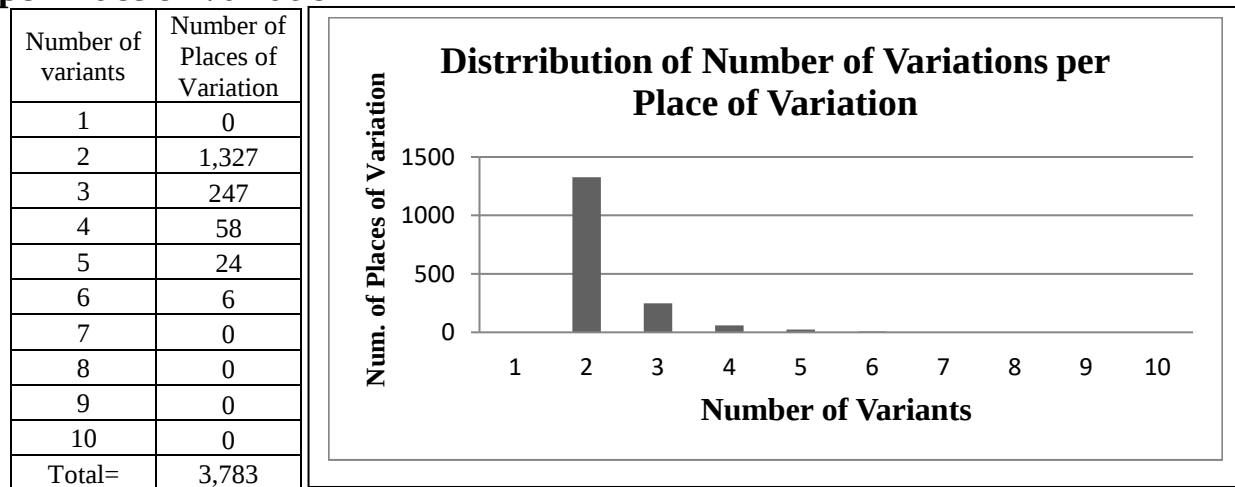

However, a few a few maverick witnesses occur whose diversity obscures their genealogical affinity. These witnesses skew the reconstruction of the stemma and for this reason are excluded from the process, but added to the completed stemma where they best fit. For Acts they are E08*, E08^c, 044*, 04^c, it-gig*, and it-gig^c. The NA-27 apparatus records 1,662 places of variation⁷ for the Acts of the Apostles with a total of 3,783 variant readings distributed among them.⁸ This averaged out to 2.28 variants per place of variation. In earlier decades, this amount of information would have been impossible to manually process, but not so today; my desktop computer

⁷ Of course, there are more places of variation than this, but the editors of the NA-27 text have weeded out those that are insignificant for reconstruction and meaning.

⁸ Appendix B provides a map showing where the places of variation occur in the text by chapter and verse.

provides complete solutions to problems this size in just a matter of minutes. Table 2.4 and its associated graph display the distribution of the number of variations per place of variation. For example, 1,327 places of variation have only two variations whereas only six place of variation has six variations.

Table 2.4
Distribution of Number of Variations
per Place of Variation

Commonness of Text

Commonness is a measure of the percentage of text two witnesses have in common. When two witnesses both have complete texts, that is, they are not fragmentary, having readings at every place of variation, they have 100% commonness, regardless of the agreement or disagreement of their readings. Fragmentary witnesses, however, are less than complete and may actually have no commonness of text. For example, witness A may be 40% complete, lacking the text for the last 60% of the places of variation, and witness B may be 40% complete, lacking the text for the first 60% of the places of variation; as a result, the two witnesses have no commonness of text. The greater the commonness of text two witnesses have the greater potential they have for genealogical affinity. Table 2.6 and its associated graph display the distribution of commonness each witness shares with every other witness for the Acts of the Apostles.

The NA-27 apparatus records seven different types of variations to the text. Table 2.5 displays the distribution of these types of variation for the Acts of the Apostles. While the type of

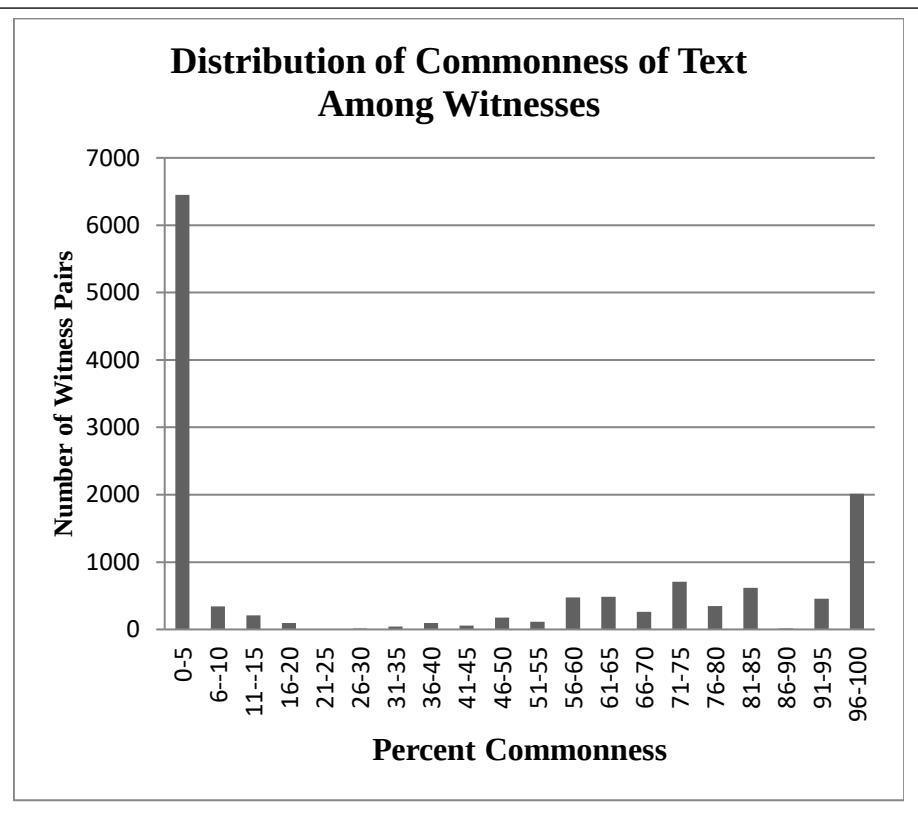

variation has no significance for the reconstruction process, the information is provided for those who are interested.

Quantitative Affinity

Quantitative affinity⁹ is a measure of how strongly two witnesses are genealogically related. Witnesses are genealogically related when they have many of the same readings at their shared places of variation. Quantitative affinity is determined by the number of places of variation where the witnesses have the same reading divided by the number of places of variation the witnesses have in common. For example, if witness A and witness B have 1,000 places of variation in common, and in 952 places they have the same reading, the quantitative affinity of A to B is $952 \div 1,000 = 0.952$ or 95.2%. Table 2.7 and its associated graph display the distribution of quantitative affinity among all the pairs of witnesses for the Acts of the Apostles. It is evident that many of the extant witnesses to Acts have relatively strong quantitative affinity with one another. These data are skewed because of the many fragmentary witnesses. A better picture of the significant affinity is that which is among witnesses having 80% content or greater. These witnesses are the ones used to reconstruct the genealogical history. Table 2.8 and its associated graph display the distribution of quantitative affinity among witnesses having 80% content or greater. This suggests that reconstruction of the genealogical history is reasonably feasible.

Genealogical Affinity

Genealogical affinity among witnesses occurs when they share a common sibling gene. The sibling gene of a witness consists of the variants initiated in its parent exemplar. This information is derived from the database as the variants two witnesses share that occur a minimum number of times in the database.

Conclusion

There are sufficient witnesses to the text of the Acts of the Apostles with dates distributed over the historical period of interest, being sufficiently complete, having relatively limited diversity, and having ample mutual commonness and strong genealogical affinity. There is good reason to expect that the genealogical history derived from these witnesses will be a good approximation of the actual textual history of the book.

⁹ Quantitative affinity is supplemented by the sibling gene to affirm sibling relationship.

CHAPTER 3

GENEALOGICAL HISTORY OF THE MANUSCRIPTS OF ACTS

This chapter presents the genealogical history of the manuscripts¹ of the Greek text of the Acts of the Apostles as reconstructed by computer program Lachmann-10.² Beginning with a data base of 172 existing witnesses, 1,662 places of variation, and 3,783 variants, the program reconstructed 32 intermediate exemplars, arranging them in the genealogical stemma (tree diagram) presented in its full form in Appendix C, but in a condensed form in Figure 3.1.³ This condensed form portrays the genealogical interrelationship of all the reconstructed exemplars of the text of Acts in which the exemplars are shown with only one principal extant witness. The rectangular boxes contain the information for the exemplars created by the software and the boxes with rounded corners contain the information for the extant witnesses. Witnesses in the same box are siblings. Figure 3.2 displays a second tree diagram including most of the terminal witnesses. All the technical data and diagrams contained in this chapter were derived from the monitor screen of Lachmann-10 or the report it created.

The head exemplars of the three main branches of the stemma are exemplars Ex-198#, Ex-201#, and Ex-203#; the texts of these exemplars are the ancient recensions from which the three unique text traditions developed. These branches are quite independent of one another, having mutual affinities ranging from 80% to 88%.⁴ But they have affinities with the autograph ranging from 84% to 96%. In addition, the sibling gene of each uniquely distinguishes them from one another.

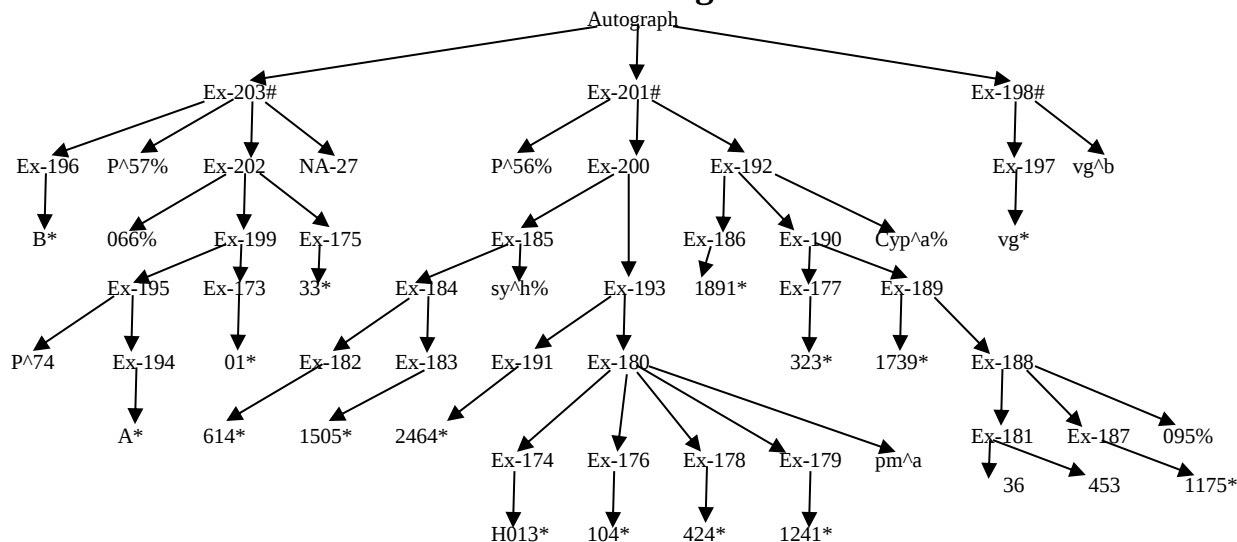

¹ The term *manuscript* is used here in its inclusive sense of manuscripts, translations, church fathers, and reconstructed exemplars—the sense I usually assign to the term *witness*.

² The total computing time was one minute and forty-three seconds including the time required for the software to assemble and format all the information contained in the tables, diagrams, and appendices of this book.

³ The full diagram, displayed in Appendix C, requires six pages. The condensed form deletes all the terminal branches (extant witnesses) except one at each exemplar—the most interesting one. Likewise, it omits exemplars that only account for same-generation mixture (those with a \$ sign attached to their name).

⁴ Ex-198# to Ex-201# (0.82); Ex-198# to Ex-203# (0.88); Ex-201# to Ex-203# (0.80).

Condensed Tree Diagram of Acts

Readings of the Autographic Text

The theory expressed in the first volume of this series⁵ indicates that the readings of the autographic text should be determined on the basis of the “consensus among ancient independent witnesses.” The solution for Acts ended up with three independent recensions which were candidates for being witnesses to the text of the autograph. The guideline given in the theory recommended selecting the three most ancient recensions for use in determining the consensus; for Acts they are: Ex-198#, Ex-201#, and Ex-203#. The text of the autograph is presented in Appendix D.

⁵ Chapter Two of *The Genealogical History of the Greek Text of the Gospel of Matthew*.

The Antiochan Recension

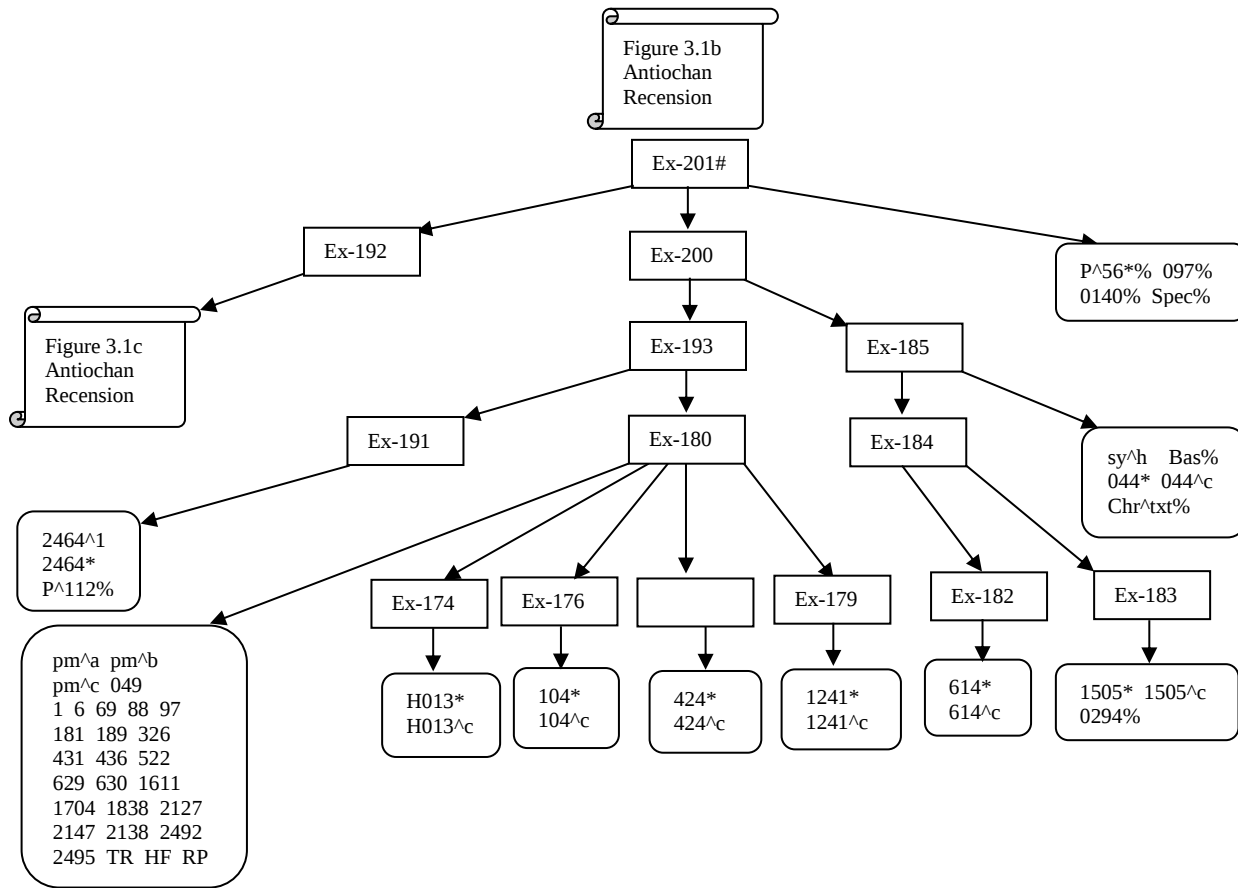

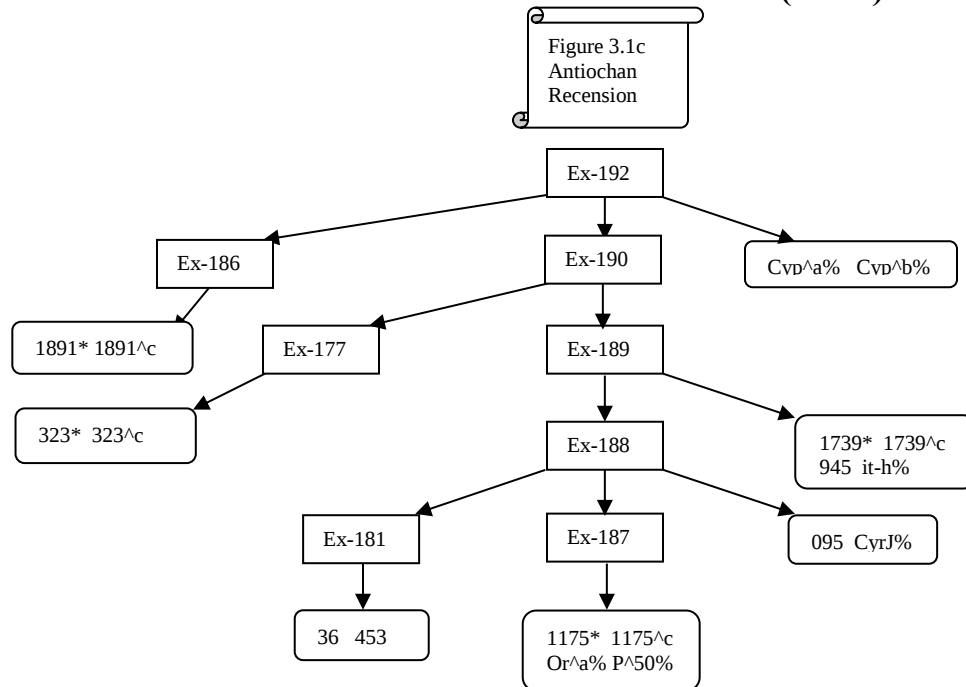

Figure 3.2c
The Antiochan Recension (con't)

The Western Text Tradition

Figure 3.3 displays the first generation with the expansion of the branch of the Western recension Ex-198#. Witnesses in boxes with square corners are reconstructed exemplars; those in boxes with rounded corners are terminal branches—that is, they contain extant witnesses. The expansions of the two other recensions (Exemplars Ex-201# and Ex-203#) are displayed in Figures 3.4 and 3.5 respectively.

The format of the information on each line is as follows: (1) the name of the witness; (2) the genealogical affinity of the witness with its primary parent exemplar, enclosed in square brackets []; (3) generation from the autograph, enclosed in angular brackets <>; (4) date, enclosed in curly brackets {}; (5) the number of variants the witness differs from its primary parent, enclosed in solidus //; (6) The number of variants in the sibling gene; and (7) the number of parents the witness has.

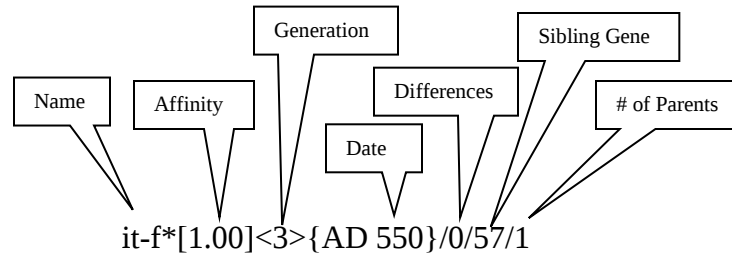

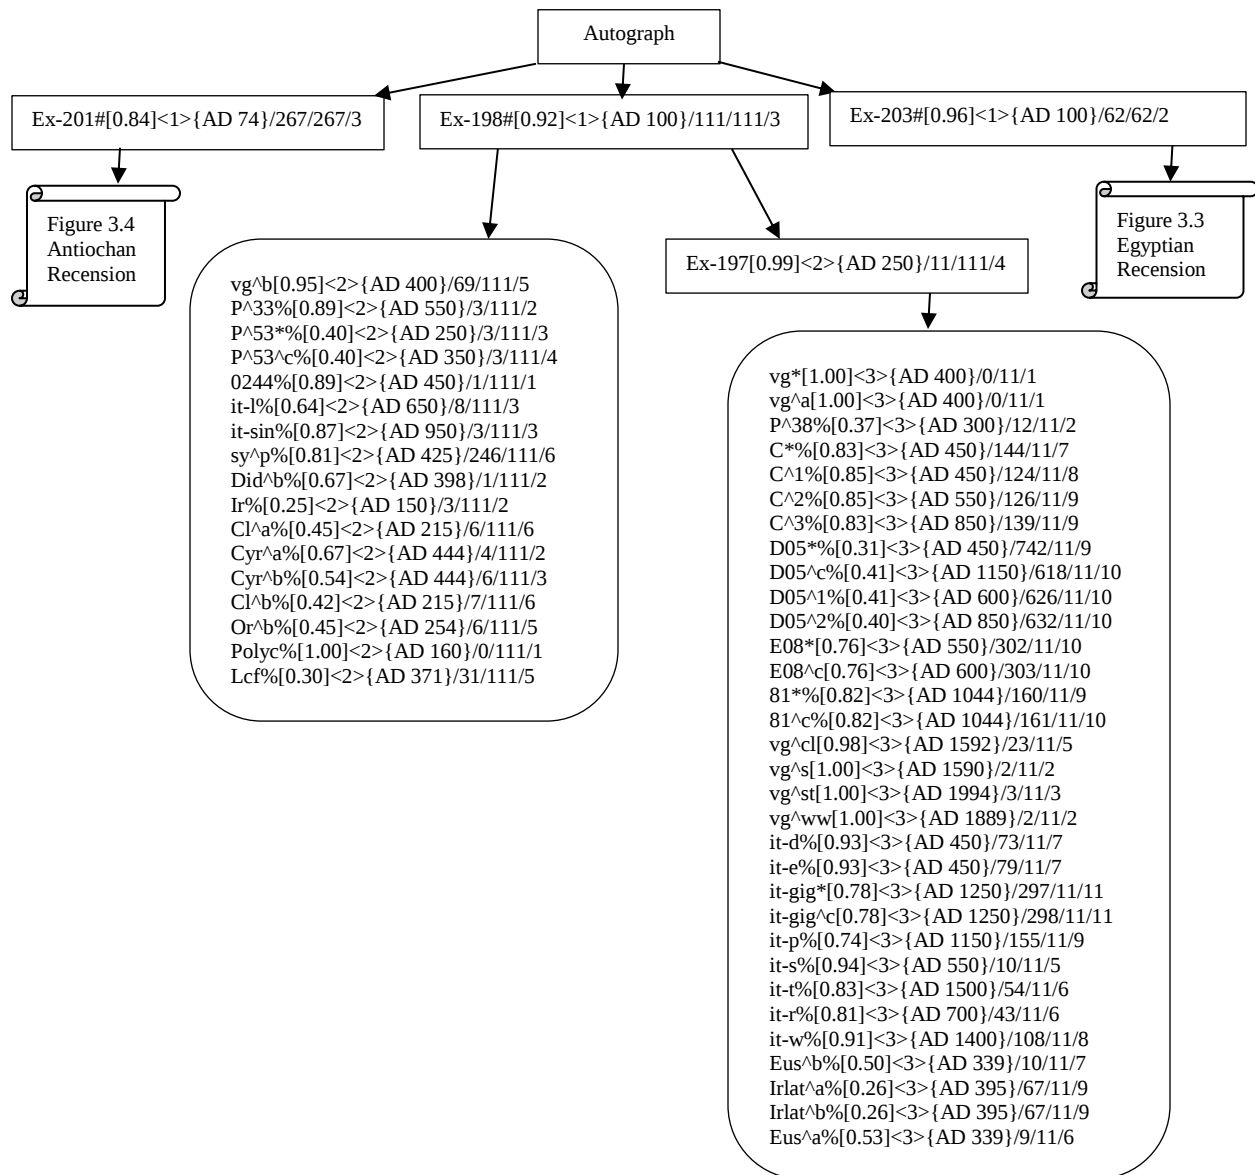

Figure 3.3
Expanded First Generation
With the Western Text Tradition

The Western text tradition is supported by nearly all of the Old Latin translations, by some papyri, by some uncials, and by some Latin church fathers. Exemplar Ex-198# was an early second-century recension (c. AD 100); it was the ancestral text from which some of the Old Latin translations were derived. I refer to this branch as the Western text tradition. It has a depth of only three generations, although it has extant witnesses as recent as AD 1500 (it-t%). This recension has an affinity with the autograph of 92%, differing from the autograph by 111 variants, and having 3 parents.⁶ It has 111 variants in its sibling gene, most of which are persistent throughout the witnesses in the branch. Although lacking 80% completeness, a number the Old Latin translations are in this branch along with a number of Latin church fathers. Its date is based on that of Irenaeus (Ir% c. AD 150), although its affinity with its parent exemplar Ex-198# is only 25%; an alternate date would be c. AD 165, based on Clementine (Cl% c. AD 215).

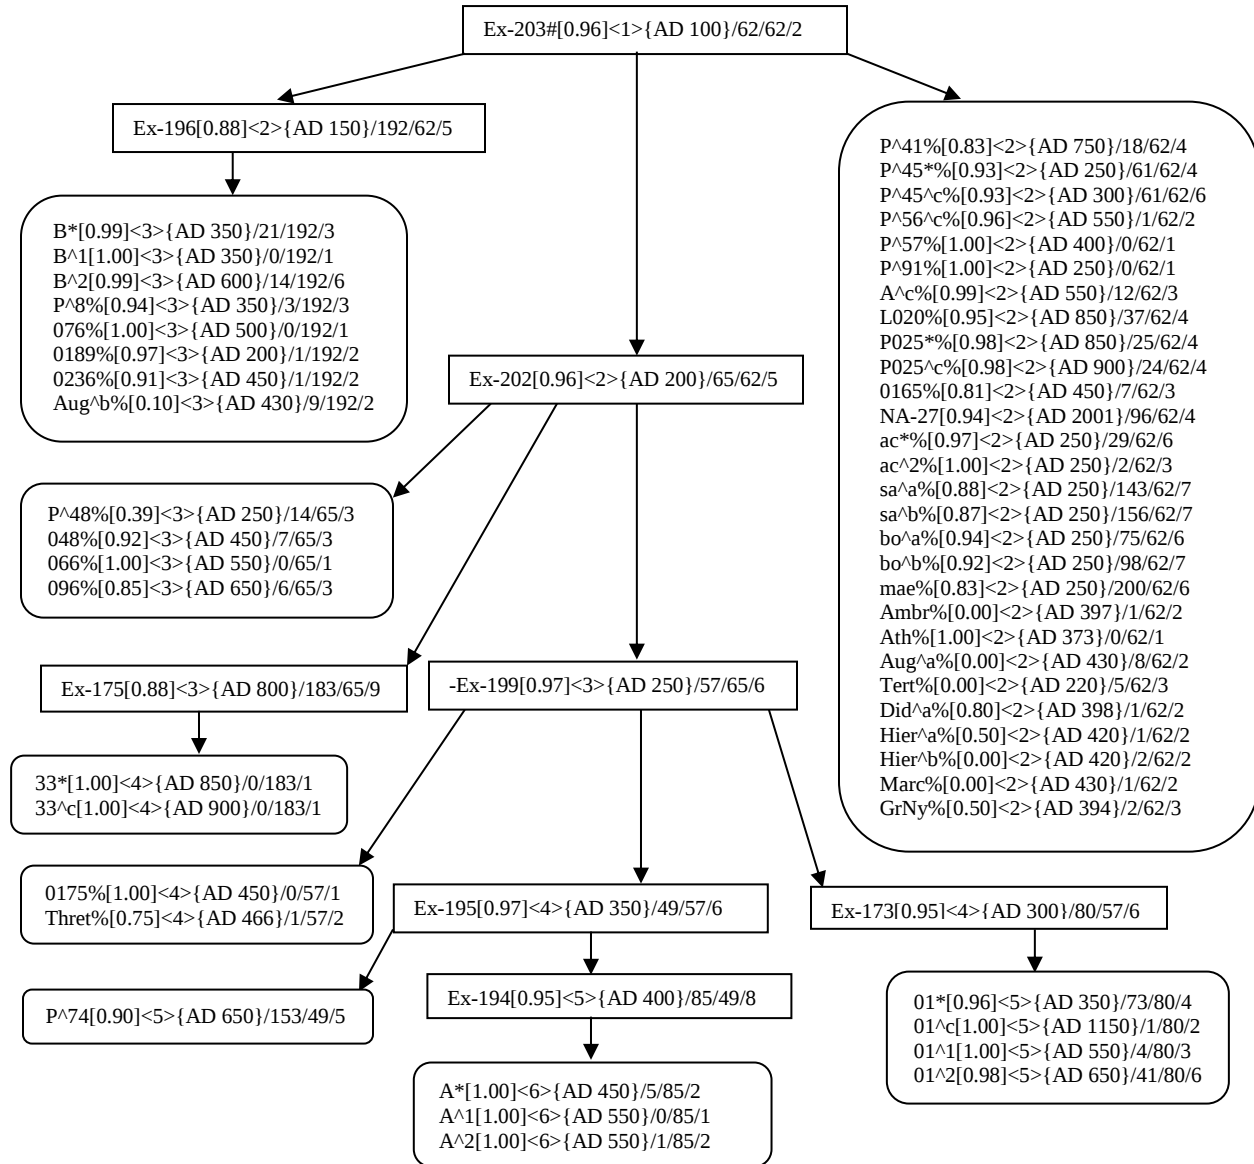

The Egyptian Text Tradition

Figure 3.4 displays the branch of the Egyptian text tradition. Exemplar Ex-203# was an early second-century recension (c. AD 100); it was the ancestral text from which the Egyptian witnesses were derived. It has an affinity with the autograph of 96%, differing from the autograph by 62 variants, and having 2 parents. It has 62 variants in its sibling gene, most of which are persistent throughout the witnesses in the branch. I refer to this branch as the Egyptian text tradition. It is the exemplar for the Akhmimic, Boharic, and Sahidic versions, and a number of uncial fragments. It is the exemplar from which papyri fragments P⁴¹%, P⁴⁵%, P⁵⁷%, P⁵⁷%, P⁹¹%, the NA-27 text and others were most likely derived. It has two second-generation recensions: Ex-196 (c. AD 150) and Ex-202 (c. AD 200). The branch has a depth of six generations and witnesses as recent as c. AD 1150 (01[^]c). Its date is established by third-generation fragment MS 0189% (c. AD 200).

Second-generation exemplar Ex-196 (c. AD 150) is the source of Codex Vaticanus (B*) and its correctors, together with fragments P⁸%, 076%, 0189%, and 0236%. Second-generation exemplar Ex-202 (c. AD 200) is the source for fragments P⁴⁸%, 048%, 066%, and 096%; it is also the source for third-generation exemplars Ex-175 and Ex-199.

⁶ Besides the autograph, the parents in this case and that of the other independent recensions are only secondary sources of same-generation mixture from virtual exemplars dating between the autograph and that of assumed first-generation.

Figure 3.4
The Egyptian Text Tradition

Third-generation exemplar Ex-175 (c. AD 800) is the most likely source of MS 33* and its corrector. Third-generation exemplar Ex-199 (c. AD 250) is the most likely source of MS 175% and church father Theodoret of Cyrillus (c. AD 466) as well as fourth-generation exemplars Ex-195 and Ex-173.

Fourth-generation exemplar Ex-195 (c. 350) is the most likely source P⁷⁴, and is the source of fifth-generation exemplar Ex-194. Fourth-generation exemplar Ex-173 (c. AD 300) is the source of codex Sinaiticus (01*) and its correctors. Fifth-generation exemplar Ex-194 (c. AD 400) is the source of MS A* and its correctors.

The Antiochan Text Tradition

Figure 3.5 displays the branch of the Antiochan text tradition. Exemplar Ex-201# was a first century recension (c. AD 74); it was the ancestral recension from which Antiochan witnesses were derived, including the subsequent Byzantine recensions; it has an affinity with the autograph of 84%, differing from the autograph by 267 variants, and having 3 parents. It has 267 variants in its sibling gene, most of which are persistent throughout the witnesses in the branch. I refer to this branch as the Antiochan text tradition because the Syriac translation sy^h is found in one of its early branches. It has seven generations and is supported by the most recent witnesses as well as by numerous early witnesses; its date is based on that of seventh-generation church father Origen (Or^a AD 254). Exemplar Ex-201# is the most likely source of fragments P⁵⁶%, MSS 097% and 0140%, as well as church father Spexulum (Spec%); it is the source of second generation exemplars Ex-192 and Ex-200.

Second-generation exemplar Ex-200 (c. AD 279) is the source of third-generation exemplars Ex-185 and Ex-193.

Third-generation exemplar Ex-193 (c. AD 350) is the text from which fourth-generation exemplars Ex-180 and Ex-191 were derived. It is the text from which the Byzantine text tradition was derived.

Fourth-generation exemplar Ex-191 (c. AD 400) is the text from which MS 2464* and its corrector were derived; it is the most likely source of P¹¹²%. Fourth-generation exemplar Ex-180 (c. 750) is the source of a large number of Byzantine witnesses, including TR, HF, and RP. It also is the source of four fifth-generation exemplars Ex-174, Ex-176, Ex-178, and Ex-179.

Fifth-generation Exemplar Ex-174 is the source of MS H013 and its corrector. Exemplar Ex-176 is the source of MS 104* and its corrector. Exemplar Ex-178 is the source of MS 424* and its corrector. And exemplar Ex-179 is the source of MS 1241* and its corrector.

Figure 3.5
The Antiochan Text Tradition

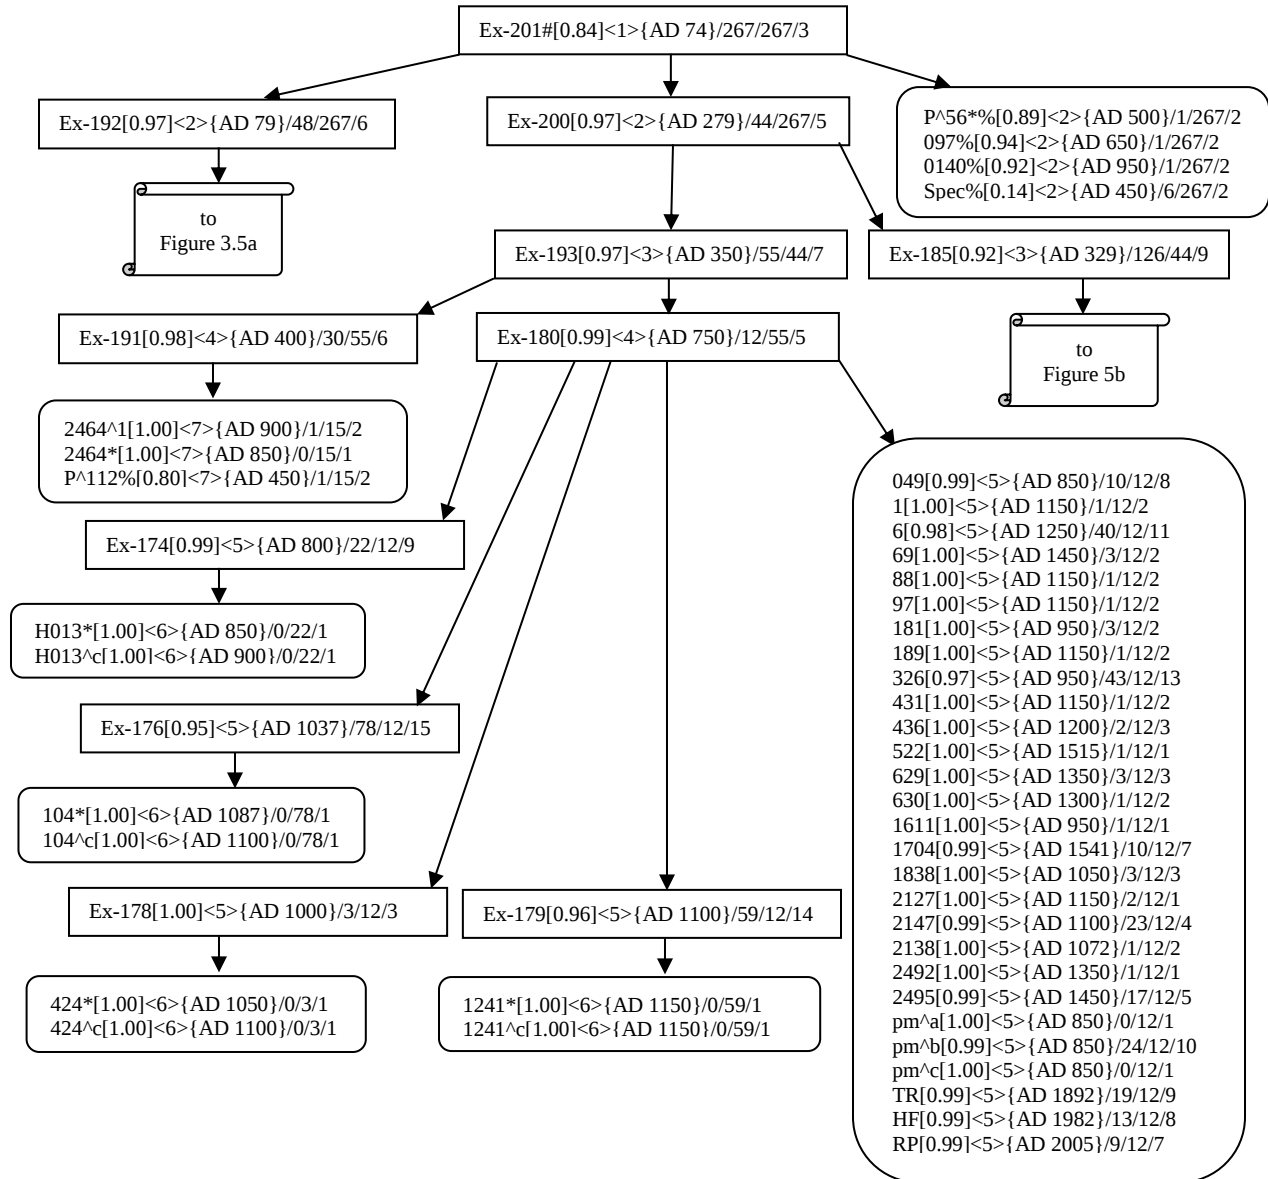

Figure 3.5a
The Antiochan Text Tradition (cont.)

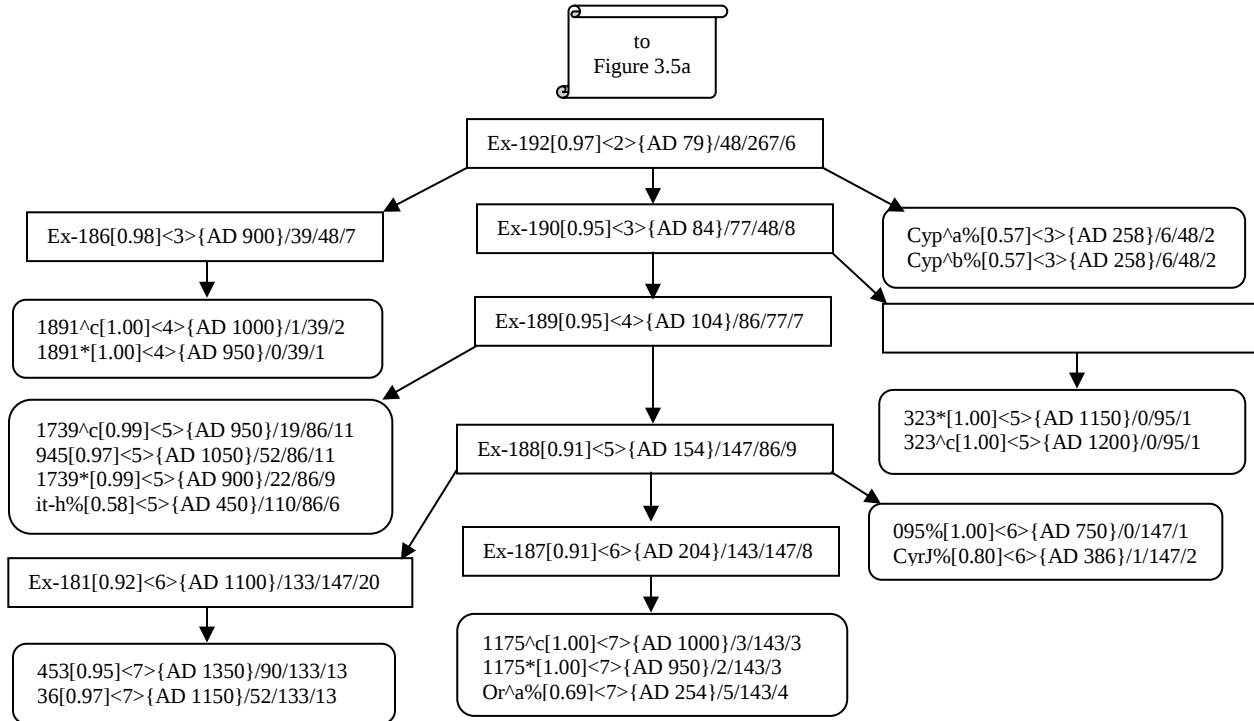

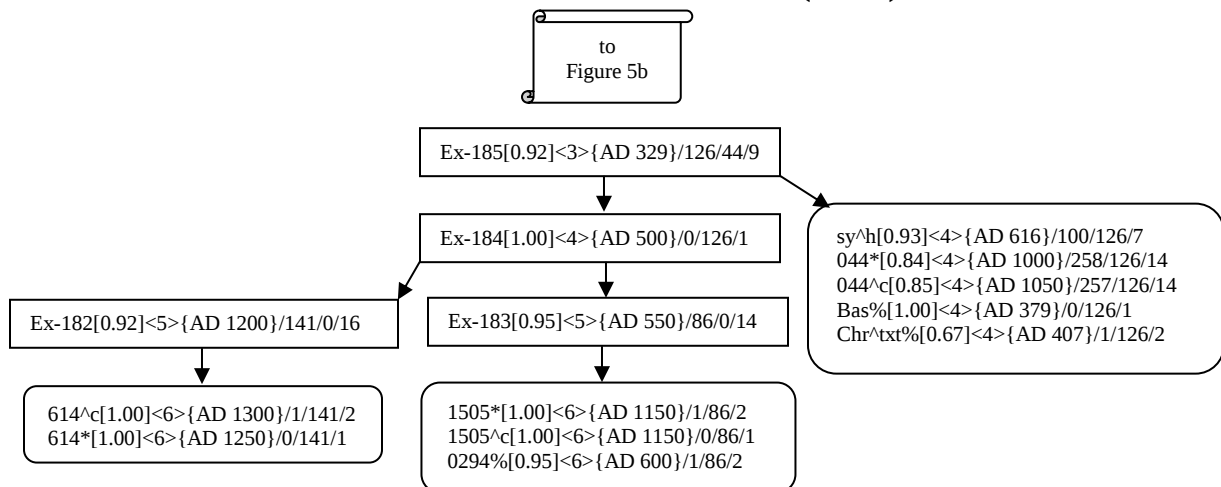

Figure 3.5b
The Antiochan Text Tradition (cont.)

Second-generation exemplar Ex-192 (c. AD 79, see Figure 3.5a) is the most likely source of church father Cyprian (Cyp), and is the source of third-generation exemplars Ex-186 and Ex-190. Third-generation exemplar Ex-186 is the source of MS 1891* and its corrector. Third-generation exemplar Ex-190 is the source of fourth-generation exemplars Ex-177 and Ex-189.

Fourth-generation exemplar Ex-177 is the source of MS 323* and its corrector. Fourth-generation exemplar Ex-189 is the source of MSS 1739*, its corrector, and 945; it is the most likely source of Old Latin it-h%; also, it is the source of fifth-generation exemplar Ex-188.

Fifth-generation exemplar Ex-188 is the most likely source of MS 095% and church father Cyril of Jerusalem (CyrJ), and is the source of two sixth-generation exemplars Ex-181 and Ex-187. Sixth-generation exemplar Ex-181 is the source of MSS 36 and 453. Exemplar Ex-187 is the source of MS 1175 and its corrector; also it is the most likely source of church father Origen (Or^a).

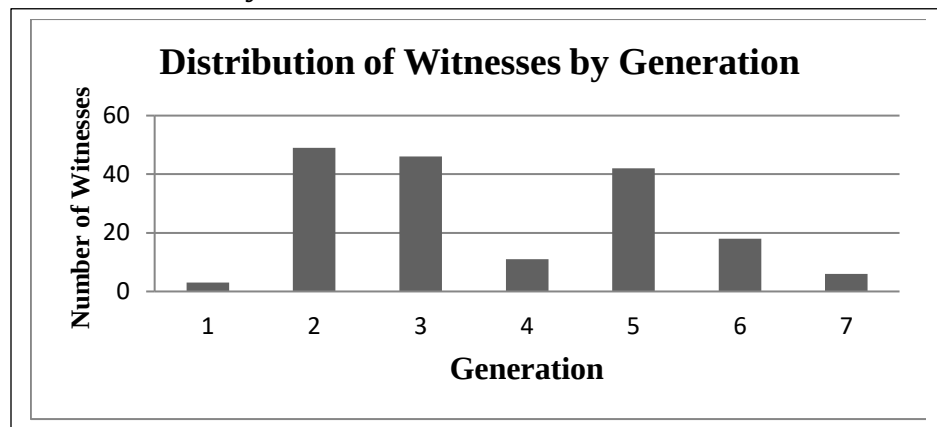

Third-generation exemplar Ex-285 (c. AD 329, see Figure 3.5b) is the source for MS 044* and its corrector as well as Syriac translation (Sy-h); it is the most likely source for church fathers Basil of Caesarea (Bas) and Chrysostom (Chr). Also it is the source of fourth-generation exemplar Ex-184. Fourth-generation exemplar Ex-184 (c. AD 500) is the source of fifth-generation exemplars Ex-182 and Ex-183. Exemplar Ex-183 is the source of MS 614* and its corrector. Exemplar Ex-183 is the source of MSS 1505*, 1505^ac, and 0294%.

The Generations of Genealogical History

Program Lachmann-10 reconstructed the genealogical history of the text of Acts in seven generations of descent from the autograph. Of course, the exact number of generations cannot be known because the genealogical history before the alleged first-generation major recensions was too fuzzy for the software to accurately reconstruct. The extant witnesses are distributed throughout every generation of the genealogical history. Table 3.1 and its associated graph display the distribution of the extant witnesses of Acts by generation.

Table 3.1

2	49
3	46
4	11
5	42
6	18
7	6

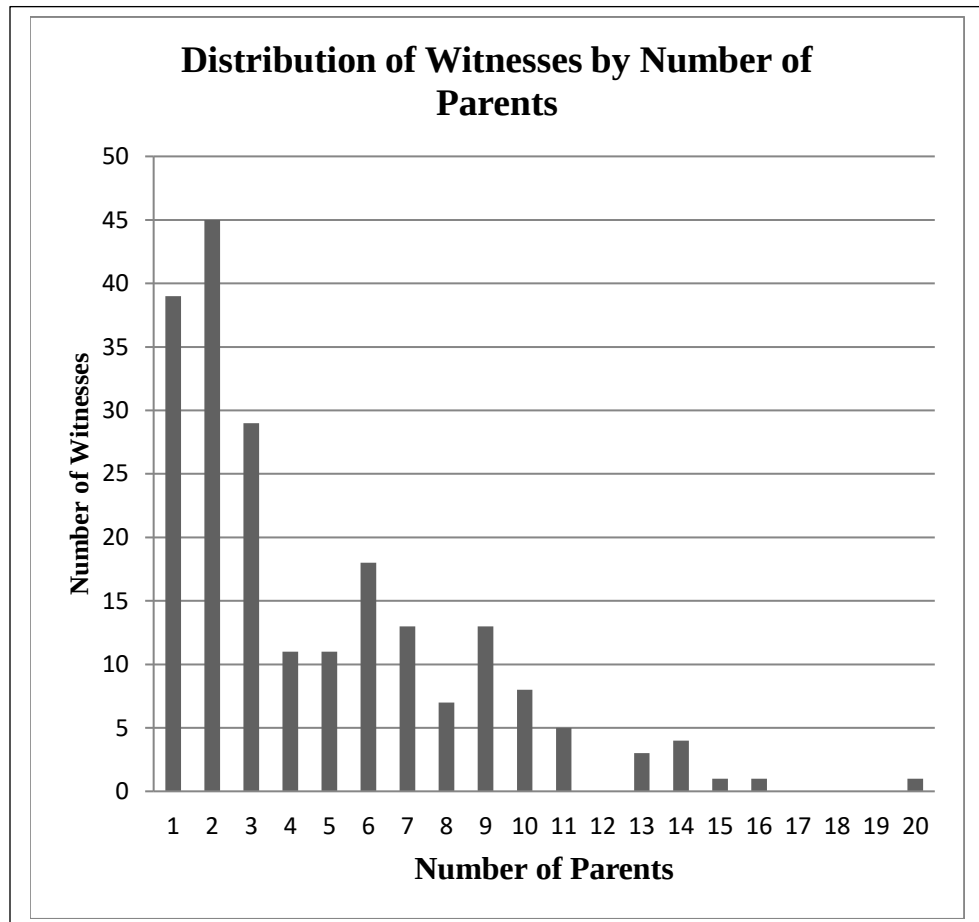

Mixture

The number of parents a witness had is a measure of the mixture of its text; the more parents, the more mixture. At any place of variation, the reading of a witness may differ from that of its primary parent exemplar⁷ for one of two reasons: (1) the reading is a newly initiated variant having no prior existence; or (2) the scribe selected the reading from one of the secondary exemplars he was consulting. Witnesses having only one parent experienced no mixture; every variant differing from that of the primary parent exemplar was newly initiated by the scribe either accidentally or intentionally. Table 3.2 displays the distribution of witnesses by number of parents. Those witnesses with the greatest mixture are those with the most diverse text; for example: 39 of the witnesses had only one parent, having no mixture at all; Exemplar Ex-181, the source of MSS 36 and 453, has 20 parents; exemplar Ex-182, the source of MS 614* and its corrector, has 16 parents; and exemplar Ex-176, the source of MS 104* and its corrector, has 15 parents; this indicates the extreme diversity of those texts. The sources of mixture are not displayed in the tree diagrams.

⁷ A primary parent exemplar is the exemplar from which a witness derives its genealogical descent; secondary parent exemplars are the sources from which a witness acquires mixture. A witness has only one primary parent, but it may have any number of secondary parent exemplars.

Primary Daughters

When an exemplar is the primary parent of one of its daughter manuscripts, then that daughter in turn is a primary descendant of the exemplar. Except for exemplars created to account for same-generation mixture (those marked with \$), an exemplar has at least two primary descendants, but it may have as many as needed for grouping multiple sibling daughters. The number of primary daughters of an exemplar is a measure of how well the software was able to find groups of sibling sisters. Table 3.3 displays the distribution of primary daughters by number of exemplars. Ex-180 has 29 primary daughters.

Critics of the genealogical theory protest that the genealogical trees it develops are almost exclusively binary, that is, nodes in the tree have only two branches—in other words, reconstructed exemplars have only two primary daughter descendants. Table 3.3 indicates that is true for Acts, but it was not so for the Gospels. Nevertheless, the principle of delayed ambiguity has rendered the criticism invalid. Exemplars with no primary descendants are those created to account for same-generation mixture; they rightly have no primary descendants.

11	2	55	1
13	1	62	1
15	1	Total	35

Secondary Daughters

When an exemplar is the source of mixture (a secondary parent) for one of its daughter descendants, then that daughter is a secondary descendant of the exemplar. An exemplar does not need to have any secondary descendants, but it may have as many as needed for resolving mixture within its associated branch. The number of secondary descendants of an exemplar is a measure of its value as a source of mixture, suggesting that scribes regarded the exemplar as having some measure of authority. Table 3.4 displays the distribution of secondary daughters by number of exemplars. The evidence indicates that there was considerable mixture among the witnesses to the text of Acts.

Resolution of Mixture

The optimizing procedures of the software resolve all mixture in a genealogical tree, leaving every instance of a variant accounted for either by genealogical descent, by mixture, or by initiation. That is, the software locates the exemplar where every variant originated in the genealogical history of the witnesses.⁸ This feature is treated further in Chapter Four where the genealogical history of the variants is discussed.

Distribution of Affinity

Another measure of the success of the software in reconstructing the genealogical history of the text of Acts is the distribution of the affinity of the witnesses to their primary parent exemplars. If this affinity is consistently high, the success may be regarded as high. Table 3.5 and its associated graph display the distribution of the affinity of the extant witnesses⁹ to their corresponding primary parent exemplar. Table 3.6 and its associated graph display the distribution of the affinity of the reconstructed exemplars to their corresponding primary parent exemplar, not including those functioning only to resolve same-generation mixture.¹⁰

The evidence from Table 3.5 indicates that all but one extant witness had a strong affinity (> 90%) with their primary parent exemplar, and all had an affinity greater than 85%. This demonstrates that considerable close grouping exists among the extant witnesses.

The evidence from Table 3.6 indicates that 28 (90%) of the 31 reconstructed exemplars¹¹ have a strong affinity (> 90%) with their primary parent exemplar, and another 3 (10%) had a moderate affinity (81-90%) with their parent. The presence of weak affinities is troubling because it questions the reality of any actual genealogical relationships. But the corresponding presence of sizeable sibling genes confirms that the given witness has a common ancestry with its alleged

⁸ While this is true for the book of Acts, for some of the other books the software may fail to uniquely identify the place of origin for a small percentage of variants.

⁹ Witnesses with less than 80% content are excluded because they do not contribute to the reconstruction of the genealogical history but are attached at the most appropriate place after the tree is complete.

¹⁰ Such exemplars do not contribute to the reconstruction of the tree diagram of the genealogical history of the witnesses, their affinity with their parent exemplar having no significance to the reconstruction process.

¹¹ The exemplars constructed just to account for same-generation mixture were not included in the study because they do not contribute to the construction of the genealogical tree.

sisters, even though the relationship may be one of distant cousins; whatever the actual relationship may have been, within the collection of witnesses the relationship is the closest possible.

96-100	15
Total	31

Global Inheritance Persistence

Another measure of the success of the software in reconstructing the genealogical history of the text of Acts is the persistence of the variants once they are initiated in the stemma of genealogical history. Ideally, once a variant is initiated, it will persist in all the descendants of the exemplar in which it was initiated. Table 3.7 presents the global statistics for inheritance persistence for the reconstructed stemma of Acts. The information is the accumulated sum of every witness' hereditary persistence. For each witness, the total number of variants it could inherit from all its ancestors was counted, also the number of those inheritable variants it actually inherited.¹²

¹² The hereditary persistence of a witness is the ratio of the number of inheritable variants to the number of actually inherited ones. The number of inheritable variants of a witness is the sum of the number of new variants initiated in all of its ancestor exemplars.

Table 3.7
Global Inheritance Persistence

Global Total Number of Inheritable Variants: ¹³	38,488
Global Number of Actually Inherited Variants: ¹⁴	34,422
Global Number of Changed Variants: ¹⁵	718
Global Number of Corrected Variants: ¹⁶	3,348

This information indicates that for the 38,488 variants (the inheritable ones) initiated in all the ancestor exemplars in the stemma, 34,422 were persistent, being actually inherited by all their respective descendants (89.43%), and 718 were changed (1.85%) somewhere in intervening ancestors. Interestingly, 3,348 of them (8.70%) were changed and corrected back to the reading of the exemplar in which the variant originated. This information indicates the solution may be regarded as reasonably successful. The persistence of variant readings may be observed in the trees tracing the genealogical history of specific variants found in Chapter four.

Date of the Autograph

The date of the autograph and that of all other reconstructed exemplars are relative, not exact, being created by the date algorithm of the software which states that a parent exemplar is 50 years older than that of its oldest sibling daughter. When the dates diminish to below AD 150, the generation gap is reduced to 20 years, giving more room for activity in the first half of the second century and earlier. When the dates diminish below AD 100, the generation gap is reduced to five years. When the date diminishes below AD 50, the generation gap is reduced to one year. The date of the autograph (c. AD 69) is traced down through the Antiochan recension to the seventh-generation fragmentary church father Origen (Or^a c. AD 254) through the following exemplars:

¹³ An inheritable variant of a witness is one of its readings that was initiated in one of its ancestral exemplars.

¹⁴ An inherited variant of a witness is one of its inheritable readings that persisted unaltered from its point of initiation through its intervening ancestors to the given witness itself.

¹⁵ An inheritable variant of a witness is counted as changed if it was altered in an intervening ancestral exemplar, disrupting its hereditary persistence.

¹⁶ An inheritable variant of a witness is counted as corrected if after being altered it is restored again to its initial reading.

```

Autograph[0.00]<0>{AD 69}/0/0/0
Ex-201#[0.84]<1>{AD 74}/267/267/3
Ex-192[0.97]<2>{AD 79}/48/267/6
Ex-190[0.95]<3>{AD 84}/77/48/8
Ex-189[0.95]<4>{AD 104}/86/77/7
Ex-188[0.91]<5>{AD 154}/147/86/9
Ex-187[0.91]<6>{AD 204}/143/147/8
Or^a%[0.69]<7>{AD 254}/5/143/4

```

The witness of Or^a% is fragmentary, having only 16 places of variation, having 69% agreement with its parent exemplar. So the date of the autograph is not firm based on this witness. But, as alternatives, the date of the autograph could be AD 80 on the basis of second-generation church father Irenaeus (Ir% c. 150) in the Western text tradition, or on the basis of third-generation fragmentary uncial 0189% (c. AD 200) in the Egyptian text tradition. In any case, the date AD 69 seems about right based on the commonly accepted date of the book.

Conclusions

The software does indeed reconstruct a genealogical history of the manuscripts of the Acts of the Apostles, and of the other books of the New Testament as well. However, the results are not what was anticipated, based on earlier experiments with smaller books, smaller databases, and less sophisticated programs. I anticipated that the commonly accepted text traditions would emerge as independent witnesses to the autograph. Those text traditions did emerge, but they turned out to be not exactly Western, Alexandrian, Caesarean, and Byzantine, but rather Western, Egyptian, and Antiochan, with Byzantine being the latest form of the Antiochan text tradition. Furthermore, The Egyptian witnesses did not form one uniform tradition but rather two somewhat diverse independent branches. Codex Sinaiticus (01*) and Codex Vaticanus (B*) emerged as relatively independent of each other and only loosely related to the other Egyptian witnesses.

This concludes the discussion of the genealogical history of the witnesses to Acts. While the reconstruction of the genealogical history of witnesses depends on the quantitative affinity (consensus), genetic affinity (sibling genes), and the date of the witnesses, the genealogical history of variant readings depends on the consensus and inheritance of variants. The history of the variant readings of the text of Acts is discussed in Chapter Four.

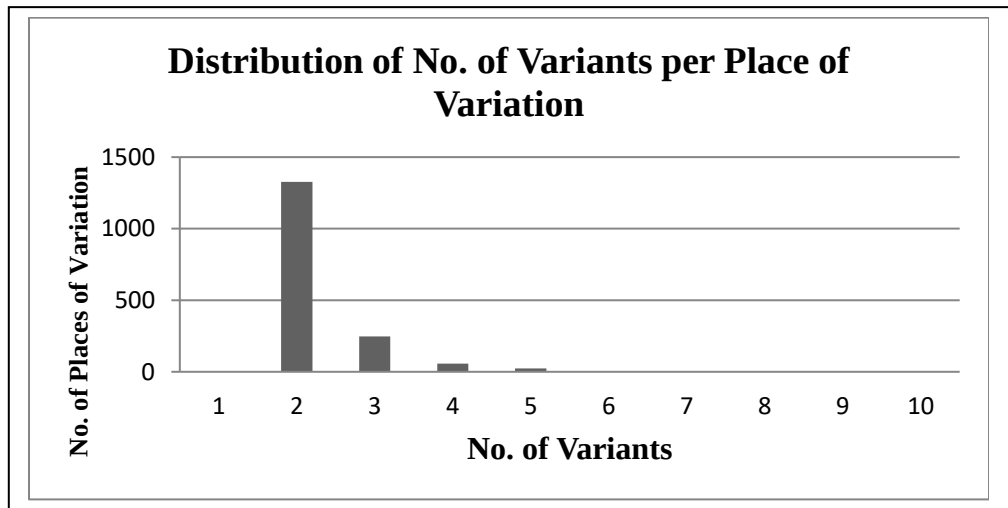

CHAPTER 4

THE HISTORY OF THE TEXTUAL VARIANTS IN ACTS

Chapter Three presents the genealogical history of the manuscripts¹ of the Greek text of the Acts of the Apostles. That history is necessary before the genealogical history of an individual variant may be intelligently discussed, because the history of a textual variant is totally dependent upon the history of the manuscripts in which it occurs. The NA-27 Greek New Testament records 1,662 places of textual variation in the book of Acts and 3,783 variant readings. This averages out to a variableness index of 2.27 variants per place of variation—a relatively low value. Table 4.1 and its associated graph display the distribution of the number of variants per place of variation.

Table 4.1
Distribution of Number of
Variants per Place of
Variation

Number of variants	Number of Places of Variation
1	0
2	1327
3	247
4	58
5	24
6	6
7	0
8	0
9	0
10	0
Total=	3,783

¹ Again, the term *manuscript* is used in its broader sense to include manuscripts, translations, quotations from church fathers, and reconstructed exemplars.

Initially the number 1,662 seems large when considering textual variations in a book of the Bible, but this number must be considered with respect to the total number of places where variation could occur. If the number of words in the Greek text of Acts (c. 19,254) is regarded as the number of places where variation could occur, and each variation is regarded as the equivalent of one word, then the text of Acts is 91% pure² before variations are even considered. Thus, variation occurs in only 9% of the text. In that small portion of the text 3,783 variants are recorded, but 1,662 of them are original readings, so only 2,121 are real variants. While this still seems like a large number, the genealogical software clearly identified all of them as non-original.

Types of Variants

Four basic types of textual variations occur in the text of Acts: (1) omissions, (2) alterations, (3) transpositions, and (4) additions. Table 4.2 lists the distribution of these types of variants in the 1,662 places of variation in the text of the Acts of the Apostles, and Table 4.3 lists their distribution with respect to all variations.

Table 4.2
Distribution of Variants by Type

Variation type	Number of Variants
Omit a word	183
Omit a phrase	49
Alternate word	654
Alternate words	369
Transposed words	45
Added word or phrase	362
Total	1,662

Table 4.3

Variation Type	Number of Variants
Omit a word	366
Omit a phrase	98
Alternate word	1,496
Alternate words	965
Transposed words	98
Added word or phrase	760
Total	3,783

² $((19,254 - 1,662) \div 19,254) \times 100 = 91.36$.

Determining Exemplar Readings

Whenever the genealogical software creates a new exemplar as the parent of a group of sibling sister witnesses, at each place of variation, the reading of the exemplar is decided on the basis of four ordered rules:

- (1) Majority consensus among all the immediate sibling children;
- (2) if no majority, then postpone the decision until a sibling emerges for the exemplar currently being reconstructed, that sibling will have the inherited reading;³
- (3) if, in the case of deciding the readings of the autograph, majority consensus fails, then accept the first variant (the NA-27 reading) if it is an option;
- (4) if the first variant is not an option, then by default arbitrarily select the smallest variant number that is an option;⁴
- (5) if witnesses are of different languages, then select the Greek reading.

Table 4.4 lists the number of times each of the above rules was used in the process of constructing the genealogical history of the text of Acts.

Table 4.4
Frequency of Exemplar Reading Rules

(1) by greatest probability	49,885
(2) by deferred ambiguity	1,964
(4) by default to NA-27	428
(5) by arbitrary choice	19
(6) by language deference	200
Total	52,496

³ I call this practice *deferred ambiguity*. Since sibling witnesses rarely have scribal errors at the same place of variation, where the reading of one sibling is ambiguous—that is, it is uncertain which of two readings is the inherited reading and which is a newly initiated error—the other siblings will have the inherited reading. Of the 60,430 decisions the software made, only 472 had more than two alternatives.

⁴ Next to the first variant—the NA-27 choice—the reading with the smaller variant number is usually supported by more witnesses than those with larger variant numbers. While this option is purely arbitrary, it turns out to be rarely significant for determining the readings of the autograph. For determining the readings of the autograph the algorithm treats the exemplars of the last three branches to be constructed as siblings constituting the ancient independent witnesses.

The evidence indicates that the vast majority of exemplar readings (95.03%) were determined by “consensus among independent witnesses,” and nearly all the remainder (3.74%) were determined by deferred ambiguity, while only 0.81% were deferred to the NA-27 reading, and 0.036% were determined by arbitrary choice or language preference.

Autographic Readings

The readings of the autographic text of Acts were determined on the basis of consensus among the three most ancient independent witnesses. For the book of Acts, the exemplars of the three most ancient independent recensions were used: (1) Exemplar Ex-198#, the Western text tradition; (2) Exemplar Ex-201#, the Antiochan text tradition; and (3) Exemplar Ex-203#, the Egyptian text tradition. Appendix D lists each of the 1,662 readings of the autograph together with its place of variation, the chapter and verse where it occurs, the reading of the text at that place, and the probability that the reading is original. Those readings lacking consensus were determined by default to the decision of the NA-27 editors’ evaluation of internal evidence if that reading was among the available alternatives; otherwise, the next lowest variant number was selected by arbitrary choice. Table 4.5 lists the number of times each of the above rules was used in the process of determining the autographic readings of the text of Acts. The evidence indicates that 86.28% of the readings were determined by “consensus among ancient independent witnesses”; only 7.58% were determined by default to the NA-27 reading; and 0.12% were determined by arbitrary choice and 6.03% by language deference.

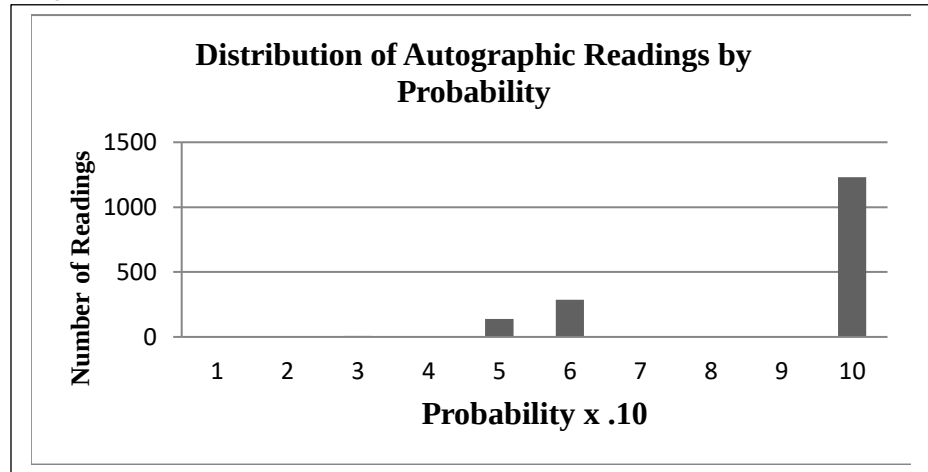

Table 4.5
Frequency of Exemplar Reading Rules

Number of Autographic variants decided by greatest probability	1,434	86.28%
Number of Autographic variants decided by Choice of NA27	126	7.58%
Number of Autographic variants decided by arbitrary choice	2	0.12%
Number of Autographic variants decided by Language deference	100	6.03%
Total	1,662	

Table 4.6 and its associated graph displays the distribution of the probability of the reconstructed autographic readings. Of the 1,662 readings, 1,230 had a probability of 1.0 (100%), 286 had a probability of 0.66 (66%), 138 had a probability of 0.5 (50%) and 8 had a probability of 0.33 (33%).

Table 4.6
Distribution of Autographic
Readings by Probability

Probability	Number of Readings
0.1	0
0.2	0

0.7	0
0.8	0
0.9	0
1.00	1,230

Agreement with NA-27

In the database used in this work, the first variant at any place of variation is the reading of the NA-27 text. The second and subsequent variants are the alternate readings listed in the database. Table 4.7 lists how often the various alternate readings were found to be original. The evidence indicates that the autographic text reconstructed by the genealogical software agrees with the text of NA-27 1,552 times or 93.38% of the time, and differs from the NA-27 text 111 times or 6.62% of the time. Appendix E lists the 111 places where the Lachmann-10 text differs from that of NA-27.

Table 4.7

The Origin of the Variants

The software identifies the place of origin of every variant in the genealogical tree, accounting for every instance of a variant as being the result of genealogical descent, mixture, or

initiation—that is, the software finds the one and only exemplar or extant witness in the genealogical history where each variant originated.⁵ Often, after the first initiation of a reading, it may have been introduced again in a later exemplar by means of mixture.

Exemplars Ex-205\$ through Ex-210\$, are children of the Autograph created by the software as sources for resolving same-generation mixture between the branches headed by the first-generation recensions, that is, for non-autographic readings that occur in more than one primary branch of the genealogical tree. These exemplars serve as virtual exemplars lost in the unrecoverable genealogical history between the Autograph and the assumed first-generation recensions. Of the 2,121 non-autographic variants, 1,521 are listed as originating in one of these virtual exemplars. Two possibilities exist for each of these variants: either it really originated only once in the earliest decades of unrecoverable history, or it originated independently in two or more major branches of the tree diagram of genealogical history; the latter case can be true for commonly occurring scribal errors, but not for the uncommon ones. Variants of the first kind are weakly distributed among the branches of the first-generation recensions and are of little genealogical significance individually; their distribution among the three most ancient recensions is weaker than that of their corresponding autographic reading.

Egyptian Recension

First-generation exemplar Ex-203# was the ancestral forefather of the Egyptian text tradition. This recension differs from the autograph by 62 secondary variants⁶ among which it uniquely originated the following 54 variants peculiar to this entire text tradition:

⁵ The place a variant reading was initially introduced in genealogical history is determined by locating the witness containing the variant reading where the reading differs from that of its parent exemplar and the reading is not accounted for by mixture. Mixture fails when the reading does not occur in any witness in preceding generations.

⁶ In this and other lists of variants herein, an exemplar enclosed in square brackets [] is the source of mixture for the associated variant. Variants are listed only by their reference: 1:11,1.2[Ex-209\$]; 2:12,1.2; 5:15,2.2; 5:23,1.1; 5:40,1.1; 6:3,2.1; 7:7,2.1[Ex-209\$]; 7:11,1.1; 7:16,2.1; 7:19,2.2; 7:25,1.2; 7:31,1.2[Ex-209\$]; 7:38,1.2; 7:46,1.1; 8:33,1.2; 9:12,3.1[Ex-209\$]; 9:30,2.1; 10:1,1.1[Ex-209\$]; 10:10,1.1; 11:2,2.1; 11:3,1.2; 11:3,2.2; 11:11,1.1; 11:13,3.1; 13:14,2.1; 13:19,2.1; 13:20,2.2; 13:25,1.1; 13:26,2.1; 13:40,1.1; 13:50,1.1; 14:11,1.1; 14:14,2.2[Ex-209\$]; 15:2,1.1; 15:7,3.1; 15:16,2.2; 15:17,2.1; 15:20,3.3; 15:29,1.1; 16:1,2.1; 17:19,2.2; 17:22,1.2; 18:23,1.2; 19:3,1.1[Ex-209\$]; 19:6,1.2; 19:20,1.1; 19:34,2.2[Ex-209\$]; 19:40,3.1; 20:1,1.1; 20:5,1.2; 20:25,1.1; 20:30,3.2; 20:31,1.1; 23:23,1.2; 24:20,2.1; 24:21,1.1; 25:13,2.1; 26:4,3.2; 26:28,3.1; 27:2,2.2; 28:25,2.1; 28:27,3.1.

Antiochan Recension

Exemplar Ex-201# was the Antiochan recension, being the text from which the Syrian and Byzantine witnesses were derived. It differs from the autographic text by 267 secondary variants,⁸ among which it uniquely originated the following 191 variants peculiar to this entire text tradition:

⁸ 1:4,1.3; 1:10,1.2[Ex-209\$]; 1:13,1.3; 1:14,1.2; 1:15,1.2[Ex-209\$]; 1:16,2.2[Ex-209\$]; 1:16,3.2; 1:19,3.4; 1:25,1.2; 2:1,4.2; 2:4,1.2; 2:7,2.2; 2:7,4.2[Ex-209\$]; 2:23,1.2[Ex-209\$]; 2:31,2.2; 2:33,1.3[Ex-209\$]; 2:36,1.2; 2:38,3.2; 2:38,4.2; 2:38,5.2; 2:41,1.2; 2:42,2.2; 2:47,2.2[Ex-209\$]; 3:3,2.2[Ex-209\$]; 3:7,1.2; 3:7,3.2; 3:21,1.2; 3:21,2.2[Ex-209\$]; 3:22,1.2; 3:25,2.2[Ex-209\$]; 4:4,2.2; 4:8,1.2; 4:17,1.2; 4:24,2.2; 4:25,1.2; 4:30,1.5[Ex-209\$]; 4:32,1.2; 4:32,2.2; 4:32,5.3; 4:33,1.1[Ex-209\$]; 4:36,1.2; 5:8,1.2; 5:10,1.2; 5:16,1.2; 5:18,1.2; 5:22,1.2; 5:24,1.2[Ex-209\$]; 5:26,4.2; 5:28,1.1; 5:33,1.2; 5:34,2.3; 5:37,1.2; 5:38,3.2; 6:3,3.2[Ex-209\$]; 6:8,1.2[Ex-209\$]; 6:13,2.2[Ex-209\$]; 6:13,3.2; 7:1,2.2; 7:3,2.2; 7:12,1.2; 7:12,2.2; 7:17,1.3; 7:18,1.2[Ex-209\$]; 7:19,3.2[Ex-209\$]; 7:26,2.2[Ex-209\$]; 7:30,2.2; 7:32,1.2; 7:32,2.2; 7:34,3.2[Ex-209\$]; 7:37,1.2; 7:39,4.4; 7:40,1.2[Ex-209\$]; 7:56,1.2[Ex-209\$]; 8:5,1.2; 8:7,1.2; 8:7,2.2; 8:9,3.3; 8:17,1.2[Ex-209\$]; 8:27,1.2; 8:31,1.2[Ex-209\$]; 8:33,2.2; 9:6,2.2; 9:8,3.2; 9:12,2.4; 9:13,1.2; 9:18,2.2; 9:18,3.2; 9:25,1.3; 9:25,2.2; 9:28,1.2[Ex-209\$]; 9:31,1.2[Ex-209\$]; 9:32,1.2; 9:34,1.2[Ex-210\$]; 9:35,1.2; 9:37,1.3[Ex-209\$]; 10:5,1.2; 10:5,2.2; 10:11,2.2; 10:11,3.2; 10:12,1.2[Ex-209\$]; 10:16,1.2; 10:17,3.2[Ex-209\$]; 10:19,2.3[Ex-209\$]; 10:19,3.2[Ex-209\$]; 10:24,1.2; 10:30,2.2[Ex-209\$]; 10:32,1.2; 10:37,2.2[Ex-209\$]; 10:46,2.2; 10:47,1.2; 10:48,1.2; 11:9,1.4[Ex-209\$]; 11:12,1.2; 11:12,2.2; 11:18,1.2[Ex-209\$]; 11:21,1.2; 11:22,1.2; 11:22,2.1; 11:23,2.2; 12:5,3.2; 12:6,1.4[Ex-209\$]; 12:8,1.2; 12:12,1.2; 12:15,2.2; 13:1,1.2[Ex-209\$]; 13:4,1.2; 13:6,2.4; 13:11,2.2[Ex-209\$]; 13:17,2.2[Ex-209\$]; 13:20,1.2; 13:22,1.2; 13:23,3.2[Ex-209\$]; 13:33,1.1; 13:33,4.2; 13:35,1.2; 13:41,1.2; 13:42,2.4[Ex-209\$]; 13:44,1.2[Ex-209\$]; 13:44,4.2[Ex-209\$]; 13:45,3.2[Ex-209\$]; 13:45,4.2; 13:45,5.2[Ex-209\$]; 13:46,2.3; 13:52,1.2[Ex-209\$]; 14:10,1.2; 14:17,1.2; 15:4,2.2; 15:6,1.2; 15:8,1.2; 15:17,1.2; 15:23,1.2; 15:23,2.2; 15:24,3.2; 15:28,1.3; 15:40,2.2[Ex-209\$]; 16:3,1.2[Ex-209\$]; 16:7,2.3[Ex-209\$]; 16:10,2.2[Ex-

Tracing Variant History

For various reasons, it may be of interest to trace the history of the genealogical heritage of the alternate readings at particular places of variation. For each variant at the desired place, one may want to see where it originated in genealogical history and how it was subsequently distributed by genetic inheritance. Upon request, software program Lachmann-10 displays the genealogical history of the variants at any selected place of variation. It constructs the historical tree diagram (like the one in Appendix C) and displays on the monitor screen the generation and index number of the variant contained in each and every witness. The following section presents typical examples of possible studies of interest, using the tree diagram displayed in Figure 3.1 in chapter three. Colors are used to mark the genealogical descent of the alternate readings: green marks the genealogical descent of the autographic reading, and other colors mark that of the alternate readings there.

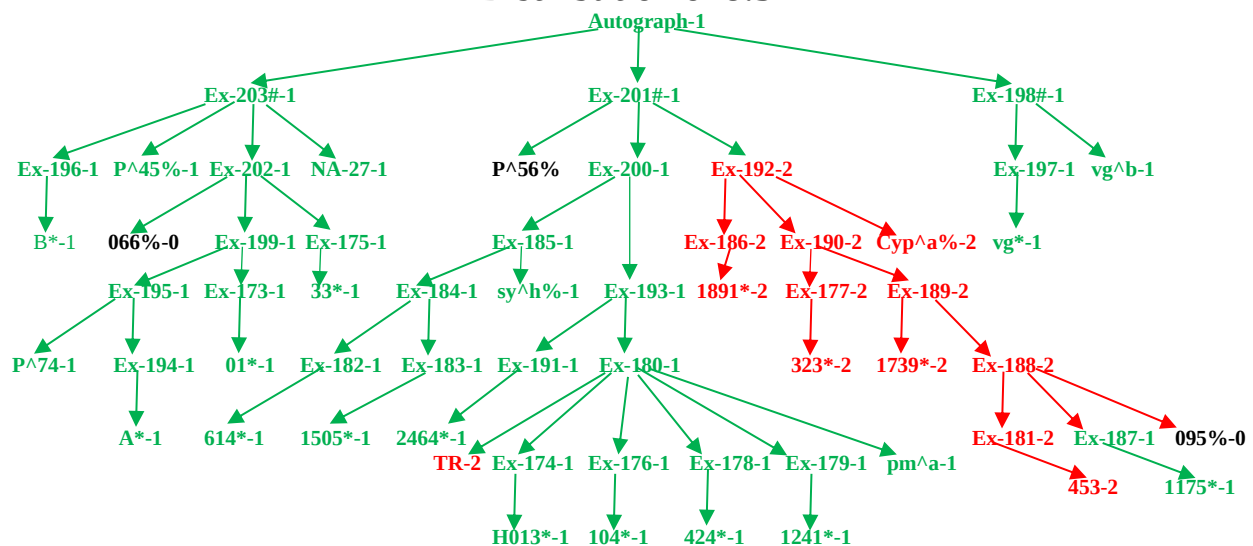

Variants of Textual Interest

The genealogical history of some variants is more interesting than that of others because of their significance for translation. For example, whole verses are missing in some witnesses (8:37; 15:34; 28:29), likewise, a significant clause is missing in 9:6. Also some places of variation have multiple options widely distributed among the witnesses (5:2, 6:70); the genealogical history may help to decide which option is more likely original.

Omit 8:37?

The thirty-seventh verse of chapter eight is lacking in some witnesses: “Then Philip said, ‘If you believe with all your heart, you may.’ And he answered and said, ‘I believe that Jesus Christ is the Son of God.’” Witnesses with variant 1 lack the verse while those with variant 2 contain it. Figure 4.1 displays the distribution of the variants throughout genealogical history. Variant 1 has the consensus of all three of the first-generation recensions (exemplar Ex-203#, the text from which the Egyptian text tradition was derived, exemplar Ex-201#, the text from which the Antiochan text tradition was derived, and exemplar Ex-198#, the text from which the Western text tradition was derived); it was selected as the autographic reading on this basis. It has the support of all the witnesses in the Egyptian text tradition. It has the support of all the witnesses of the Antiochan text tradition except those in the sub-branch headed by second-generation exemplar Ex-192, except for its sixth-generation sub-branch headed by exemplar Ex-187.

Figure 4.1
Distribution of 8:37

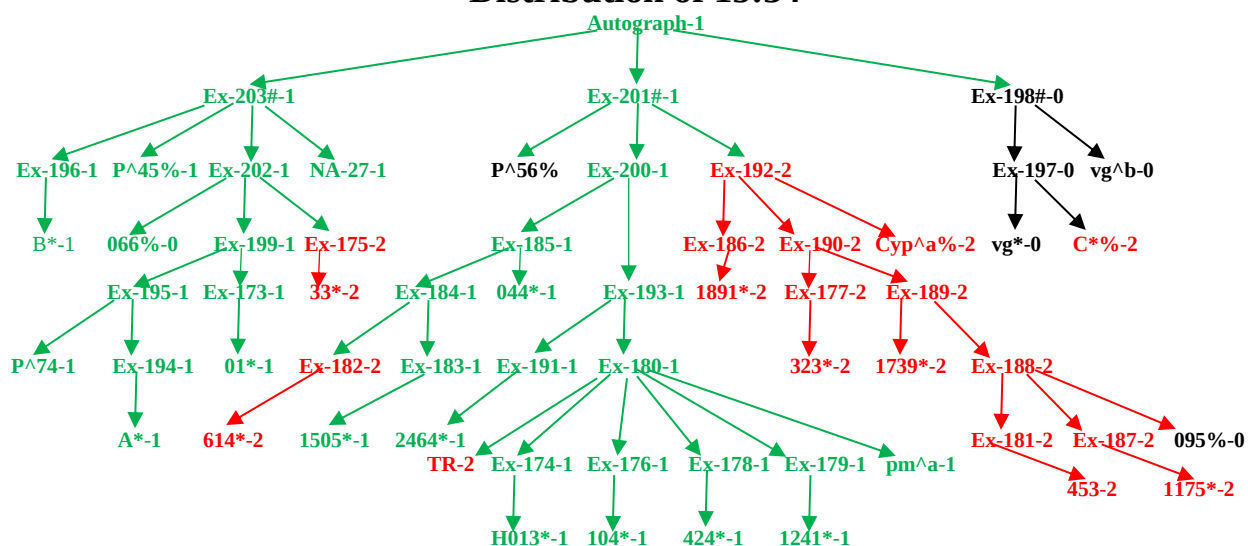

Variant 1 also is supported by the principal witnesses in the Western text tradition, but some witnesses support Variant 2: MSS E08*, E08^{^c}, and most of the Old Latin witnesses. Variant 2 occurs in all the witnesses in the sub-branch of the Antiochan text tradition headed by second-generation exemplar Ex-192, except the witnesses in sixth-generation sub-branch headed by exemplar Ex-187. Strangely, it occurs in Scrivener's *Textus Receptus* (TR), in this case, standing against all 29 its sibling manuscripts (see Figure 3.5a in Chapter 3). The genealogical evidence indicates that the verse was not original, but was added quite early in the recension of exemplar Ex-192.

Omit 15:34

The thirty-fourth verse of chapter fifteen is lacking in some witnesses: "However, it seemed good to Silas to remain there." Actually, there are three variant readings at this place: Witnesses with variant 1 lack the verse while those with variant 2 contain it, whereas those with variant 3 contain an added clause "Only Judas departed." Figure 4.2 displays the distribution of the variants throughout genealogical history. Variant 1 has the consensus of two of the three the first-generation recensions: exemplar Ex-203#, the text from which the Egyptian text tradition was derived, exemplar Ex-201#, the text from which the Antiochan text tradition was derived; it was selected as the autographic reading on this basis. The Western text tradition headed by exemplar Ex-198# has a lacuna, that is, the editors were not able to determine accurately what the underlying Greek text read.

Figure 4.2
Distribution of 15:34

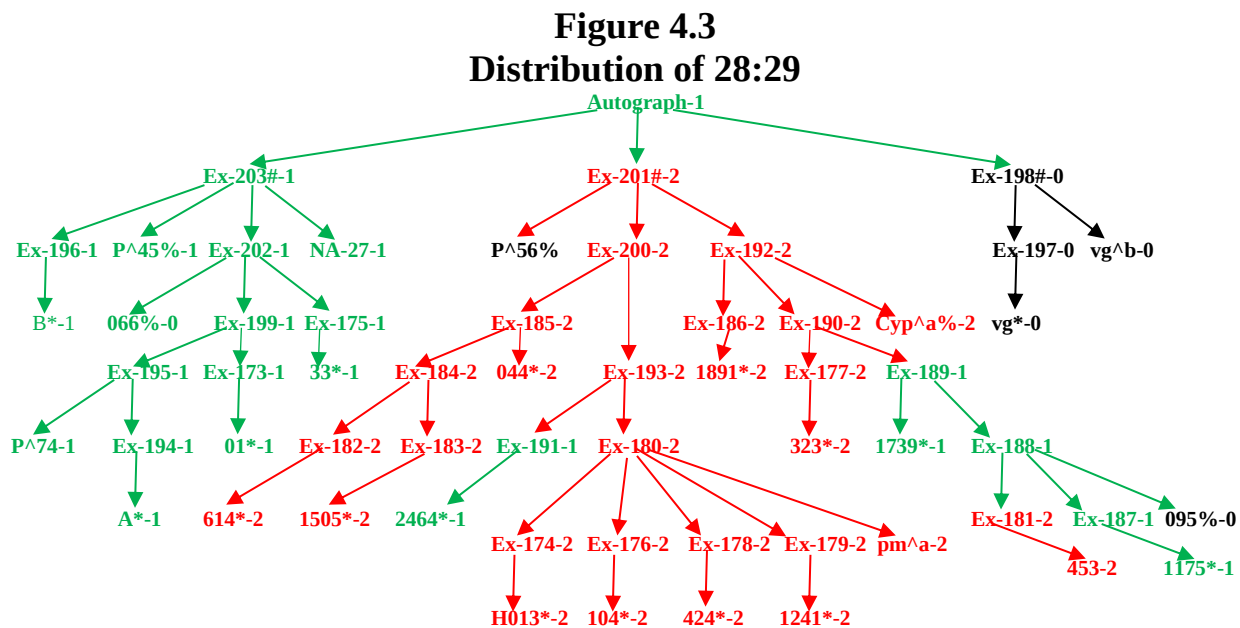

Variant 2, the shorter verse, occurs in the witnesses in two remote sub-branches of the Antiochan text tradition: those in the sub-branch headed by second-generation exemplar Ex-192, and fifth-generation exemplar Ex-182; it also occurs in third-generation sub-branch of the Egyptian text tradition headed by exemplar Ex-175, along with the Sahidic translations (sa^a% and sa^b% not shown in the diagram). It also occurs in fragmentary MS C*% and its correctors in the second-generation branch of the Western text tradition headed by exemplar Ex-197. Strangely, again it occurs in Scrivener's *Textus Receptus* (TR), in this case, standing against all 29 its sibling manuscripts (see Figure 3.5a in Chapter 3).

Variant 3, the longer verse, occurs in fragmentary MS D05*% and its correctors, and in Old Latin translations it-gig*%, it-gig^c%, it-l%, and it-w% (not shown in the diagram). The genealogical evidence strongly supports the verse as not being original.

Omit 28:29

The twenty-ninth verse of chapter 28 is lacking in some witnesses: "And when he had said these words, the Jews departed and had a great dispute among themselves." Witnesses with variant 1 lack the verse while those with variant 2 contain it. Figure 4.3 displays the distribution of the variants throughout genealogical history.

This is an instance where there is no consensus among the three ancient text tradition. The Egyptian text tradition headed by exemplar Ex-203# supports variant 1, lacking the verse; the Antiochan text tradition headed by exemplar Ex-201# supports variant 2, containing the verse; and

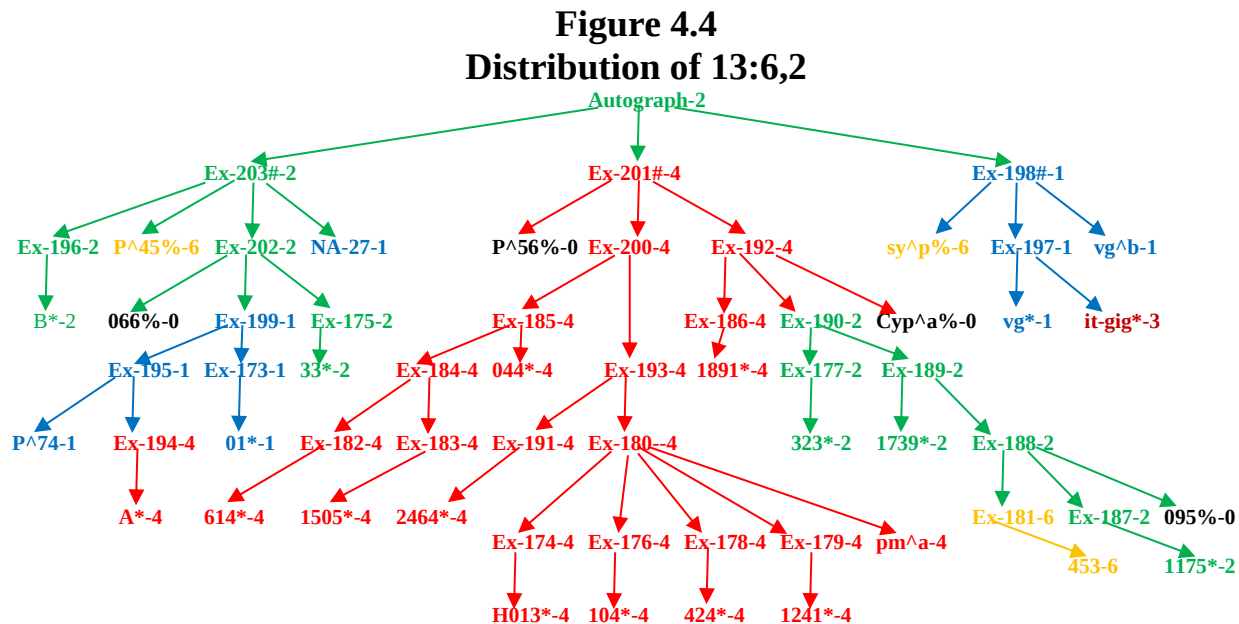

the Western text tradition headed by exemplar Ex-198# has a lacuna, that is, the editors were not able to determine accurately what the underlying Greek text read. The fragmentary witnesses in the Western text tradition that have a reading here are about equally supporting either variant. In this case, Lachmann-10 accepted variant 1 as the reading of the autograph, because it is the reading of NA27 which more likely has the better internal evidence.

Multiple Variants at 13:6,2

There are six variant readings regarding the spelling of the name of a false prophet:

- (1) ^εω ονομα Βαριησου: whose name was Bariesou [Bar-Jesus]
- (2) ^εω ονομα Βαριησους: whose name was Bariesous [Bar-Jesus]
- (3) ω ονομα Βαριησου ο μεθερμηνευεται Ελυμας: whose name was Bariesou which is interpreted Elymas
- (4) ω ονομα Βαριησουν: whose name was Bariesoun [Bar-Jesus]
- (5) ονοματι καλουμενον Βαριησουαν: whose name was called Bariesouan [Bar-Jesus]
- (6) ονοματι Βαριησουν: by the name of Bariesoun {Bar-Jesus}

Figure 4.4 displays the distribution of these variants throughout genealogical history. This place of variation is an instance where no consensus occurs among the first-generation recensions. So Lachmann-10 opted to variant 1, the reading of NA-27, because of the likelihood that it has the best support from internal evidence.

The Egyptian text tradition headed by exemplar Ex-203# supports variant 2; the Antiochan text tradition headed by exemplar Ex-201# supports variant 4; and the Western text tradition headed by exemplar Ex-198# supports variant 1. Lachmann-10 arbitrarily selected variant 2 as the autographic reading by default.

Variant 1 is supported by most of the witnesses in the Western text tradition headed by exemplar Ex-198#, and by most of the witnesses in the third-generation sub-branch of the Egyptian text tradition headed by exemplar Ex-199. Variant 2 is supported by the early branches of the Egyptian text tradition, and by most of the witnesses in the third-generation sub-branch of the Antiochan text tradition headed by exemplar Ex-190.

Variant 4 is supported by most of the witnesses in the Antiochan text tradition headed by exemplar Ex-201#, except for those in the remote sub-branch headed by third-generation exemplar Ex-190. Variant 3 is supported by Old Latin translations it-gig*, it-gig^c, and it-w% in the second-generation sub-branch of the Western text tradition headed by exemplar 197, and by church father Lucifer (Lcf) also there. Variant 5 is supported by MS D05^2% in the Western text tradition (not shown); and variant 6 is supported by Syriac translation sy^p% in the Western text tradition, and by MS 453 in the Antiochan text tradition. There is no possibility that these latter three variants could be original.

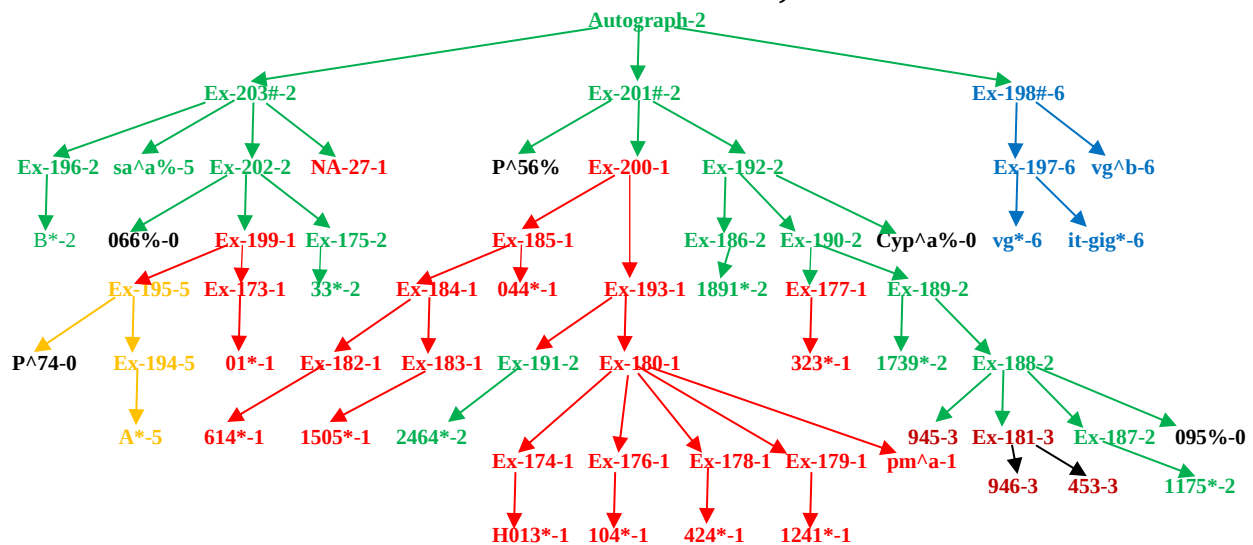

Multiple Variants at 27:8,2

There are six variants in the eighth verse of chapter 27 where differences exist as to the identity of a city on Paul's journey to Rome:

- (1) Μασαια: Masaia
- (2) Μασσεα: Massea
- (3) Μασσια: Massia
- (4) Λαισσα: Laissa
- (5) Αλασσα: Alassa
- (6) Υηλασσα: Yealassa

Figure 4.5 displays the distribution of these variants throughout genealogical history.

Figure 4.5
Distribution of 27:8,2

Variant 2 has the consensus of two of the three the first-generation recensions: exemplar Ex-203#, the text from which the Egyptian text tradition was derived, exemplar Ex-201#, the text from which the Antiochan text tradition was derived; it was selected as the autographic reading on this basis. It occurs in most of the witnesses of the Egyptian text tradition and in the witnesses of the Antiochan text tradition except most of those in sub-branch headed by second-generation exemplar Ex-200.

Variant 1 occurs in most of the witnesses in sub-branch of the Antiochan text tradition headed by second-generation exemplar Ex-200, third-generation exemplar Ex-199 of the Egyptian text tradition which includes Codex Sinaiticus (01*) and its correctors, except 01^2 which alone has variant 4.

Variant 3 occurs only in MSS 453 and 946, very late in the Antiochan text tradition. Variant 4 occurs only in the second corrector of Codex Sinaiticus (01^2). Variant 5 occurs in one sub-branch of the Egyptian text tradition headed by exemplar Ex-195, and the Sahidic translations sa^a% and sa^b% [descendants of exemplar Ex-203# but not shown in the diagram]. Variant 6 occurs in all of the witnesses in the Western text tradition headed by exemplar Ex-198#. The genealogical evidence supports variant 2 as the autographic reading.

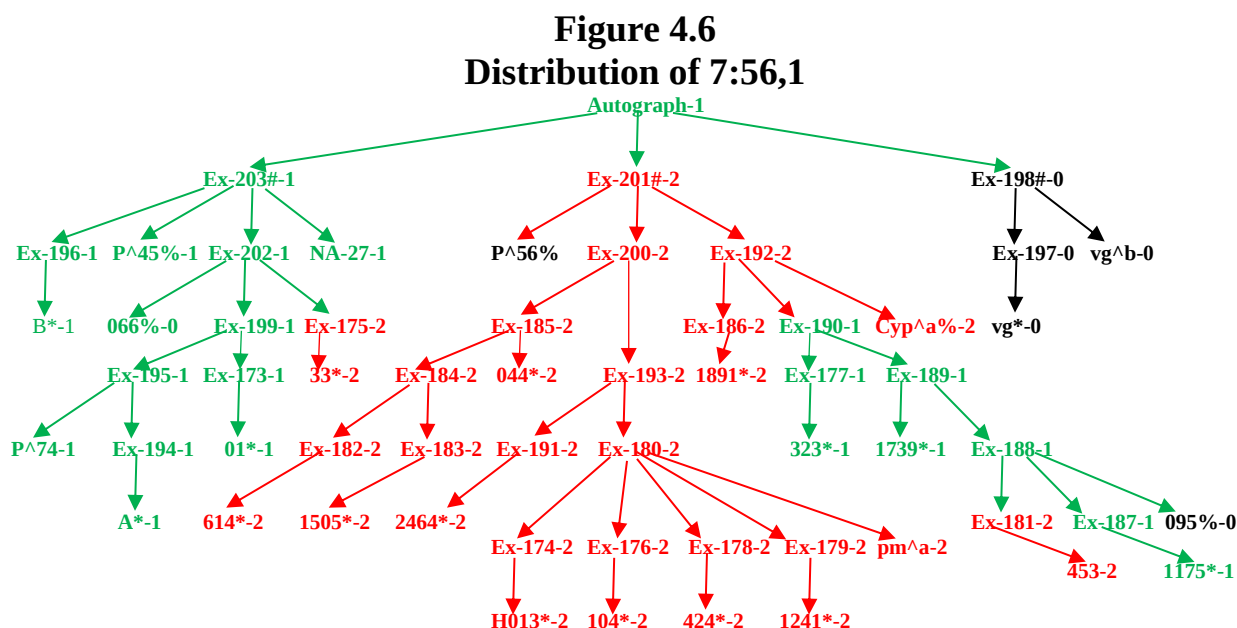

Ambiguity at 7:56,1

Whenever the editors of the NA-27 textual apparatus could not determine the underlying Greek text from which a translation was made, they provided no reading for that translation at that

place of variation, as though it were a lacuna. In the Lachmann-10 database lacunae are treated as variant 0, an ambiguous reading that does not contribute to determining the reading of parent exemplars. This ambiguous condition occurred whenever the alternative readings at that place of variation had no effect on translation; consequently, whenever this ambiguity occurred broad scale for the Latin translations, the Western text tradition had a lacuna—variant 0. This condition left Lachmann-10 with a consensus probability of 0.50 (50%) whenever the Egyptian and Antiochan text traditions differed. This ambiguous probability occurred 139 times in the autographic text of Acts, for example, in the first place of variation in chapter seven verse 56. Two variants occur here, different nuances of the heavens opening:

- (1) διηνοιγμενους: [the heavens] opening
- (2) ανεωγμενους: [the heavens] opening

Figure 4.6 displays the distribution of these variants throughout genealogical history. Variant 1 occurs in all the witnesses in the Egyptian text tradition headed by exemplar Ex-203#, except those in third-generation sub-branch headed by exemplar Ex-175. Variant 2 occurs in all the witnesses in the Antiochan text tradition headed by exemplar Ex-201#, except those in third-generation sub-branch headed by exemplar Ex-190. In this case, Lachmann-10 chose variant 1, the reading of NA-27, assuming that it had the better support from internal evidence. In reality, as in the case of the Latin translations, this textual variation has no effect on English translations.

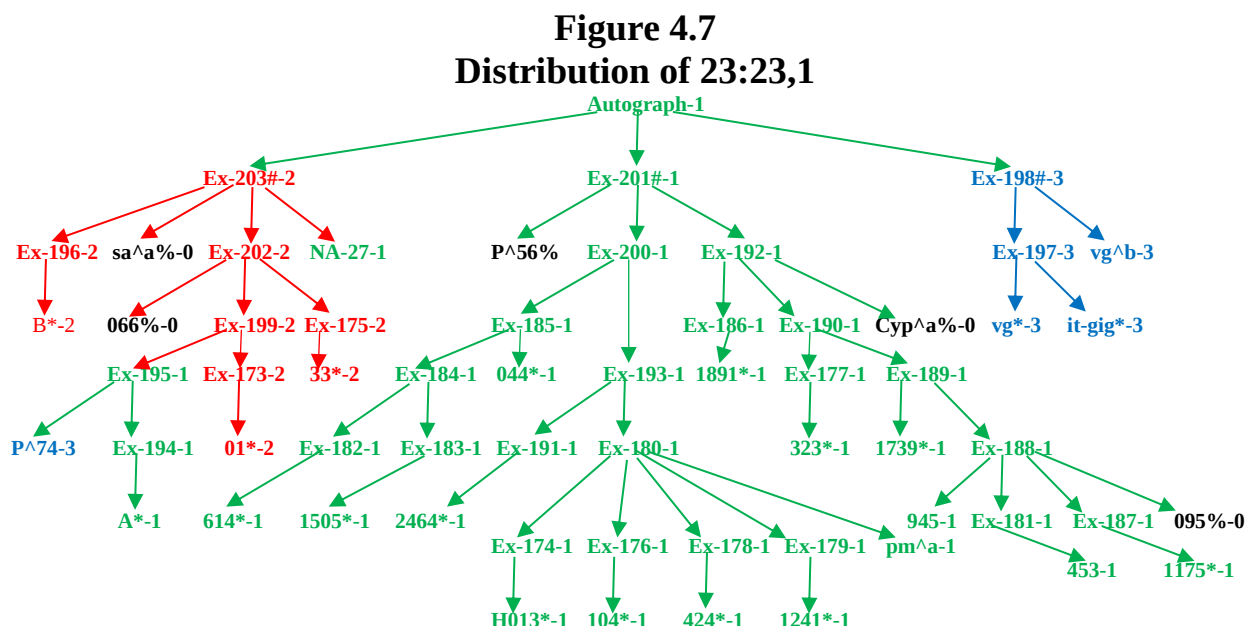

Ambiguity at 23:23,1

Of the 1,662 places of variation in the Acts of the Apostles, Lachmann-10 found 8 autographic readings with a probability of 0.33 (33%).⁹ One example occurs in 23:23,1. There are three variant readings here, primarily differences in word order:

- (1) δύο τινάς: a certain two
- (2) τινας δύο: a certain two
- (3) δύο: two

Figure 4.7 displays the distribution of these variants throughout genealogical history. The head exemplars of the three first-generation recensions each have a different reading, so there is no consensus; Lachmann-10 assigned Variant 1 as the autographic reading by default to the reading of NA27 which was one of the alternatives. It is interesting to note that the NA-27 reading differs from most of the witnesses in the Egyptian text here, including both Codex Sinaiticus (01*) and Codex Vaticanus (B*).

Variant 1 is the reading of all of the witnesses in the Antiochan text tradition headed by exemplar Ex-201#; it also occurs in a remote sub-branch of the Egyptian text tradition headed by fourth-generation exemplar Ex-195. Variant 2 is the reading of most of the witnesses in the Egyptian text tradition headed by exemplar Ex-203#. Variant 3 is the reading of all the witnesses in the

⁹ 1:19,3; 4:2,2; 4:25,1; 9:12,2; 10:47,1; 13:6,2; 22:2,1; 23:23,1.

Western text tradition headed by exemplar Ex-198#, and of MS P⁷⁴ in the Egyptian text tradition. These variants have very little effect on English translations.

Variants of Theological Interest

Although most textual variations have little or no practical theological significance, a number are found in theological discussions. For example, Bart D. Ehrman argued that the earliest form of the Greek New Testament was less “orthodox” than the canonical form that emerged at the end of the “proto-orthodox” debates that culminated in the dominance of the “orthodox” parties in the fourth century. He wrote:

It was within this milieu of controversy that scribes sometimes changed their scriptural texts to make them say what they were already known to *mean*. In the technical parlance of textual criticism—which I retain for its significant ironies—these scribes “corrupted” their texts for theological reasons.¹⁰

He is right about the ante-Nicene debates over the various heretical issues of the time and the emerging dominance of the orthodox parties, but his thesis that the doctrine of the apostles and first-century church, and the earliest form of the New Testament text were less “orthodox” is purely hypothetical. Of course, he provided what he regards as evidence. However, my own evaluation of the evidence he presented to establish his thesis indicates that the readings supported by the “consensus of ancient independent witnesses” are genuinely orthodox as normally interpreted, and that his “orthodox corruptions”—those intended to make orthodox doctrine more explicit—are found only in peripheral sources having little chance of being textually authoritative. The same may be said of any alleged “unorthodox” variants. So, I must conclude that what Ehrman really means is that the traditional canons of textual criticism are of no value for understanding the early text, that the “canonical text” of the New Testament is an “orthodox corruption,” and that the original text, if there ever was one original, is forever lost. The one thing he was sure of according to his “Socio-historical” research is that the earliest text was not “orthodox” and the current form of the text (i.e., the NA-28 text) is a corruption of the original text, being altered by orthodox scribes for theological reasons.

Ehrman has a problem, however, because, by his own admission, he does not know what the original text was. So how can he know it was corrupted? Also, evidently, he does not know, or

¹⁰ Bart D. Ehrman, *The Orthodox Corruption of Scripture* (New York: Oxford University Press, 1993), xii; italics his.

at least he rejects, the fact that each existing witness has within its variants the history of its genealogical descent from the original text, and the fact that genealogical principles reconstruct the original text back to the first century, the time of the apostles. So, the reconstructed text is a first century event, not a fourth century one, and it is theologically orthodox, not a corruption. The following is some of the evidence he presented regarding doctrine in the Acts of the Apostles:

Acts 13:33,2

Regarding Acts 13:33 Ehrman asserted:

We have seen that orthodox Christians of the second and third centuries opposed separatist Christologies by emphasizing that Christ himself suffered and died. They also emphasized that the one raised from the dead was Christ, a doctrine that seemed to them the natural corollary. . . . Given the orthodox view of Christ's resurrection, one can fairly well anticipate the ways orthodox scribes might change their texts of the New Testament. Likely candidates for such changes would be passages that could be taken to say that it was only the man Jesus, not the one Jesus Christ, who was raised from the dead. . . . A comparable change occurs in the speech of Paul in the synagogue of Pisidian Antioch. Here Paul declares that the resurrection has fulfilled the promises that God made to the Jewish ancestors: "We proclaim the good news to you, that the promise given to the fathers, God has fulfilled to us their children, by raising Jesus, as it is written in the second psalm. . . . The addition of Χριστός to the name Jesus (D 614 sy^h) appears to resolve two potential Christological problems simultaneously.¹¹

There are three variant readings at this place:

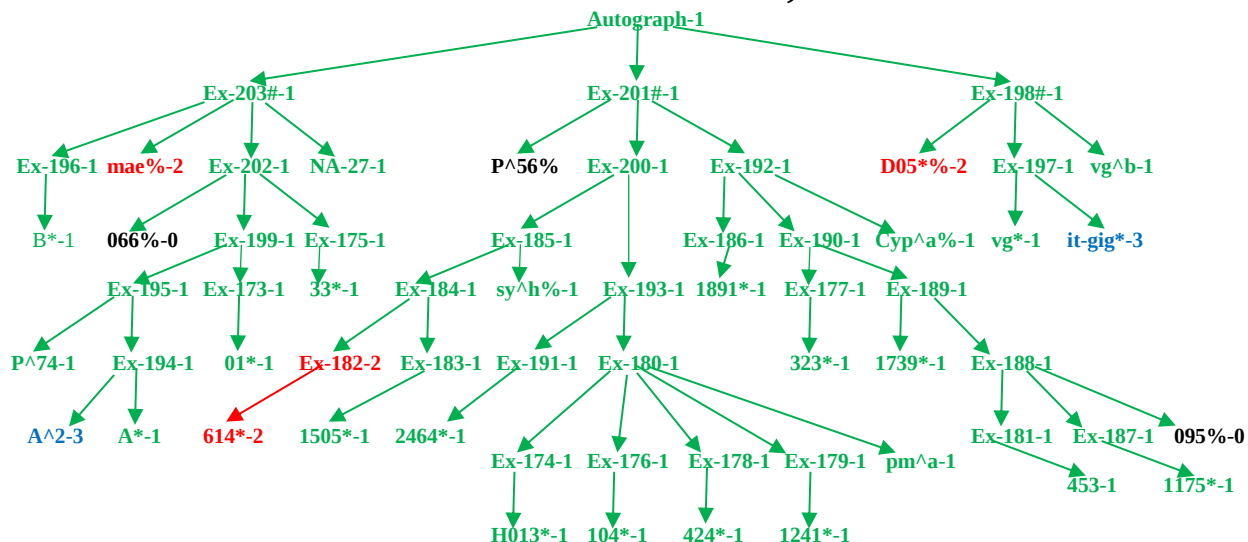

- (1) Ἰησοῦν: Jesus
- (2) τοῦ κυρίου Ἰησοῦν Χριστοῦ: the Lord Jesus Christ
- (3) αὐτοῦ ἐκ νεκρῶν: him from the dead

Figure 4.8 displays the distribution of these variants throughout genealogical history. Variant 1 has the consensus of all three first-generation recensions: exemplar Ex-203#, the text from which the Egyptian text tradition was derived, and exemplar Ex-201#, the text from which the Antiochan text tradition was derived; and exemplar Ex-198#, the text from which the Western text tradition was derived; so it was assigned to the autograph. Variant 2, which Ehrman regarded as an orthodox corruption, occurs only in MS D05* and its correctors, located in the Western text tradition, in MS 614* and its corrector, located in a remote sub-branch of the Antiochan text tradition, and in the Middle Egyptian Coptic translation (mae%), located in the Egyptian text tradition, a descendant of exemplar Ex-203#. Variant 3, which has no bearing on Ehrman's theological claim, is found in the second corrector of MS A* (A²) in a remote sub-branch of the Egyptian text tradition, in Old Latin translation it-gig* and its corrector in a sub-branch of the Western text

¹¹ Ehrman, pp. 155-56.

tradition. The genealogical evidence clearly indicates that Ehrman's orthodox corruption did not corrupt anything but its own local text.

Figure 4.8
Distribution of 13:33,2

Acts 20:28

Ehrman argued: “One of the ways that proto-orthodox Christians of the second and third century expressed their understanding of Christ involved an ‘exchange of predicates,’ in which the attributes and activities of God were predicated of Christ, or, conversely, the characteristics and actions of Christ were predicated of God.”¹² Regarding Acts 20:28 he stated:

Perhaps the most striking example occurs in the manuscript tradition of Acts 20:28, where a variety of corruptions appear to circumvent different misconstruals. There is little doubt concerning the original form of the passage: Paul speaks to the Ephesian elders about “the Church of God (τὴν ἐκκλησίαν τοῦ θεοῦ) which he obtained through the blood of his own (Son)” (τοῦ αἵματος τοῦ ἰδίου). Of the textual variants germane to our discussion here, the first concerns the genitive “of God,” which in a number of witnesses has been changed to read “of the Lord.” This latter phrase (“church of the Lord”) is almost certainly a corruption. . . . The reading τοῦ κυρίου could refer to Christ as well as to God, making it somewhat more acceptable in the minds of certain Christians who were uncomfortable with the potentially Patripassianist implications of the following phrase, τοῦ αἵματος τοῦ ἰδίου, which may naturally be rendered “his own blood.” . . . Given the initial textual problem, the change of τοῦ αἵματος τοῦ ἰδίου at the end of the verse takes on additional significance, showing how orthodox Christologies could effect seemingly contradictory corruptions of the text. For this final phrase has been changed in a number of witnesses precisely along the lines of the “exchange predicates” mentioned earlier, making the text appear not to *discourage* a Patripassianist misconstrual so much as to *encourage* an orthodox interpretation that Christ, as God, obtained the

¹² Ehrman, p. 87.

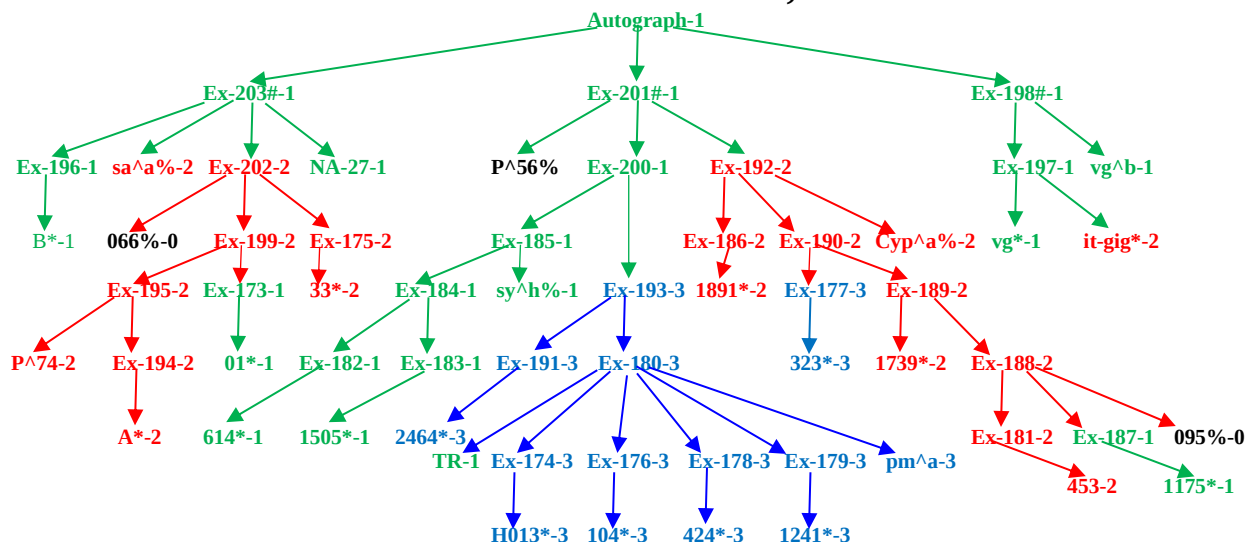

church by shedding his blood. Thus, in the majority of Greek witnesses, the “blood of his own (Son)” (τοῦ αἵματος τοῦ ἰδίου), has been changed to read “his own blood” (τοῦ ἰδίου αἵματος).¹³

Two problems are presented in the above statement. Regarding the first alleged corruption of this verse, there are three variant readings at this place:

- (1) θεου: God
- (2) κυριου: Lord
- (3) κυριου και θεου: Lord and God

Figure 4.9 displays the distribution of these variants throughout genealogical history. Variant 1 (God) has the consensus of all three of the first-generation recensions: exemplar Ex-198#, the text from which the Western text was derived; exemplar Ex-201#, the text from which the Antiochan text tradition was derived; and exemplar Ex-203#,¹⁴ the text from which the Egyptian text tradition was derived; so it was assigned to the autograph. Variant 1 (God) is supported by the most significant witnesses in the Egyptian text tradition, headed by exemplar Ex-203#, by the witnesses in one prominent branch of the Antiochan text tradition, and strangely enough by Scrivener’s *Textus Receptus* (TR), and by all the prominent witnesses in the Western text tradition.

Figure 4.9
Distribution of 20:28,1

¹³ Ehrman, pp. 87-88.

¹⁴ The readings of exemplars Ex-201# and Ex-203# were decided on the basis of that of NA27 having the best internal evidence.

Variant 2 (Lord) occurs in a number of fragmentary witnesses in the Western text tradition headed by exemplar Ex-198#,¹⁵ in the witnesses in the branch of the Antiochan text tradition headed by exemplar Ex-192, and in a sub-branch of the Egyptian text tradition headed by exemplar Ex-202, and in the Coptic translations ac, sa^a, sa^b, bo^a, and mea, descendants of exemplar Ex-203# but not shown in the diagram.

Variant 3 (Lord and God) occurs in all the witnesses in the remote sub-branch of the Antiochan text tradition headed by fifth-generation exemplar Ex-193, which consists of all the Majority Text witnesses except Scrivener's *Textus Receptus* (TR); it also occurs in the witnesses in the sub-branch headed by fourth-generation exemplar Ex-177. Ehrman was right in that the changes were probably made for theological reasons, but the genealogical evidence indicates that the canonical text (NA27) retains the original reading, not being affected by later variants.

Regarding the second alleged corruption of this verse, there are three variant readings at this place:

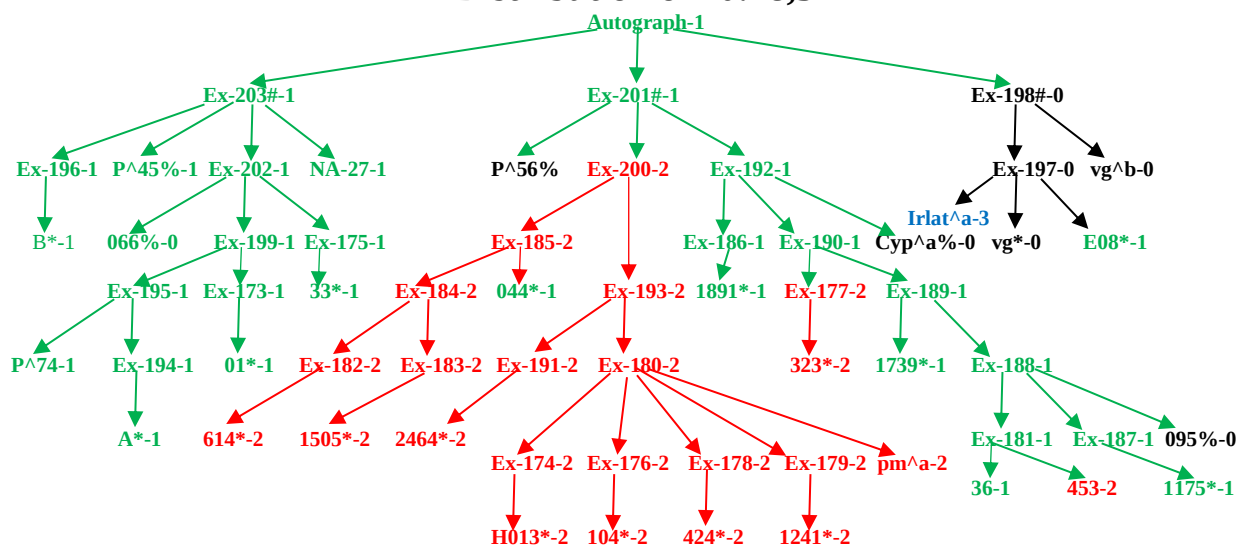

- (1) αιματος του ιδιου: blood of his own (Son)
- (2) ιδιου αιματος: his own blood
- (3) αιματος αυτου: his blood

Figure 4.10 displays the distribution of these variants throughout genealogical history. Variant 1 has the consensus of two of the first-generation recensions: exemplar Ex-203#, the text from which the Egyptian text was derived, and exemplar Ex-201#, the text from which the Antiochan text tradition was derived; so it was assigned to the autograph. The Western text tradition headed by exemplar Ex-198# lacks a witness here because the editors were unable to determine the underlying text, so it was treated as a lacuna.

Variant 1 occurs in all the witnesses of the Egyptian text tradition headed by exemplar Ex-203#, and in most of the witnesses in the branch of the Antiochan text tradition headed by exemplar Ex-192. All the Latin witnesses lack a reading at this place, so exemplar Ex-198#, the head of the Western text tradition, has a zero reading here; but within that branch of genealogical history fragmentary MS C* and its correctors, D05% and its correctors, E08* and its corrector, 044* and its corrector, and church father Cyr^a% and Cyr^b% have variant 1.

¹⁵ D05*% and correctors, E08* and correctors, Old Latin it-gig*% and corrector, and church father Irlat^a%, Irlat^b, and Lcf%.

Figure 4.10
Distribution of 20:28,3

Variant 2 occurs in all the witnesses in two remote sub-branches of the Antiochan text tradition headed by second-generation exemplar Ex-200, and by fourth-generation exemplar Ex-177; it also occurs in seventh-generation MS 453. The witnesses in these sub-branches constitute the Byzantine text tradition.

Variant 3 occurs in only two separate Latin quotations of Irenaeus (Irlat^a% and Irlat^b%) in the Western text tradition. Ehrman was right in that the changes were probably made for theological reasons, but the genealogical evidence suggests that the change was made late and did not alter what genealogical evidence indicates was the autographic reading here.

Other Variants of Theological Interest

The following is a discussion of some other passages in Acts where doctrinal issues have been raised by advocates of the Byzantine text tradition.

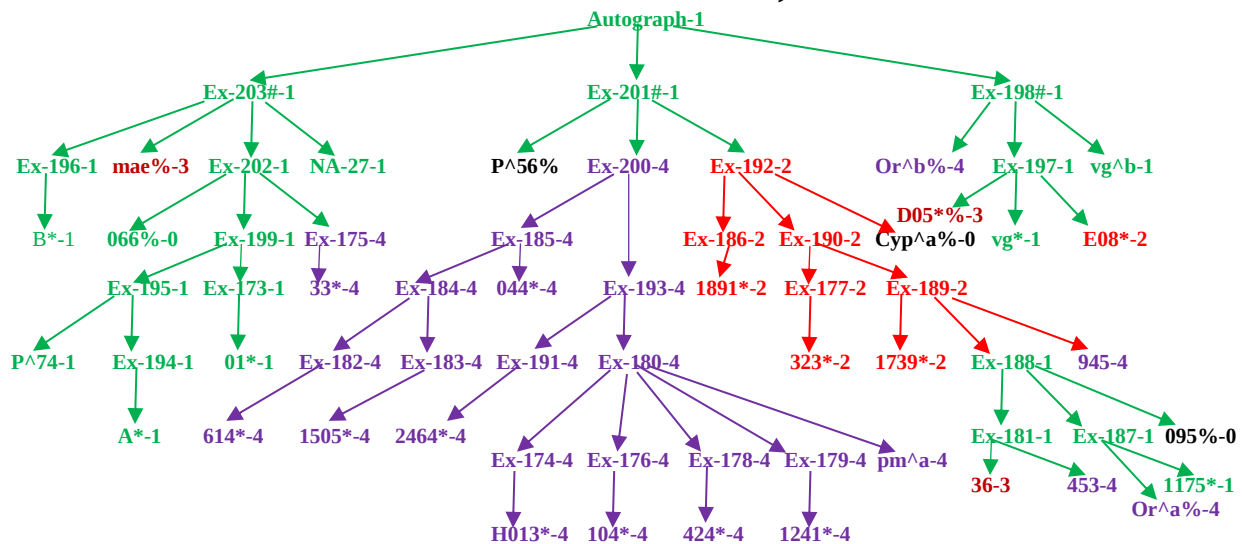

Acts 2:30

“Therefore, being a prophet, and knowing that God had sworn with an oath to him that of the fruit of his body, according to the flesh, He would raise up the Christ to sit on his throne.” In this passage from Peter’s sermon on the day of Pentecost, some witnesses contain the reference to Christ’s resurrection and some do not. Advocates of the Byzantine text regard the absence of this phrase to be detrimental to the doctrine of the resurrection of Christ. There are four variant readings here:

- (1) omit
- (2) *αναστησαι τον χριστον*: to raise up the Christ
- (3) *κατα σαρκα αναστησαι τον χριστον και*: according to the flesh to raise up the Christ and
- (4) *το κατα σαρκα αναστησειν τον χριστον*: according to the flesh to raise up the Christ

Figure 4.11 displays the distribution of these variants throughout genealogical history. Variant 1, which lacks a reading here, has the consensus of all three first-generation exemplars, so it was assigned to the autograph. This variant occurs in nearly all the witnesses in the Egyptian text tradition headed by exemplar Ex-203#, and in nearly all the witnesses in the Western text tradition except for a number fragmentary witnesses.¹⁶ It also occurs as the reading of exemplar Ex-201#, the head of the Antiochan text tradition, but this happened because of the ambiguity of the readings in its descendants, exemplar Ex-192 reading variant 2, and exemplar Ex-200 reading variant 4; in this case Lachmann-10 defaulted to the reading of NA-27. It also occurs in the witnesses in a late sub-branch of the Antiochan text tradition headed by fifth-generation exemplar Ex-188.

Figure 4.11
Distribution of 2:30,2

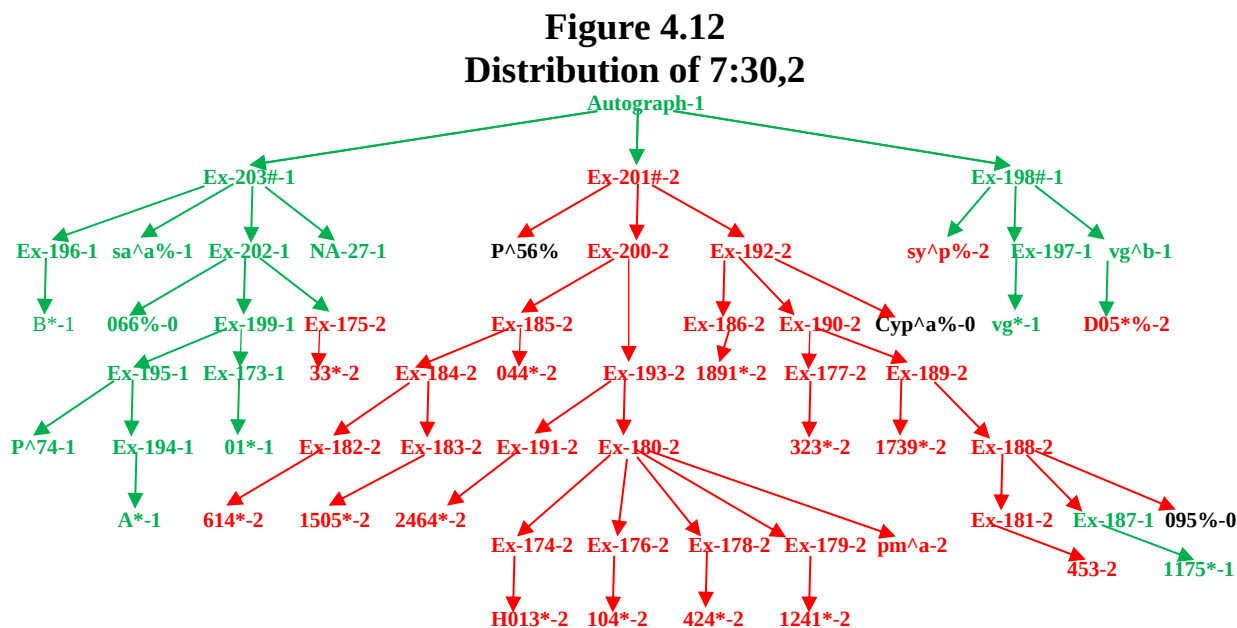

Variant 2 occurs in one branch of the Antiochan text tradition headed by second-generation exemplar Ex-192, except for those in its fifth-generation sub-branch headed by exemplar Ex-188; it also occurs in MS E08* and its corrector in the Western text tradition. Variant 3 occurs only in three independent witness: MSS D05%, 36, and in the Middle Egyptian Coptic translation (mae).

¹⁶ Or^b% has variant 4, D05*% has variant 3, E08* and its corrector have variant 2.

Variant 4 occurs in all the witnesses in the Antiochan text tradition beginning with second-generation exemplar Ex-200. The genealogical evidence indicates that the autographic text lacked a reading at this place of variation. This should not be regarded as detrimental for the doctrine of the resurrection because Peter spoke of the resurrection of Christ twice more in the succeeding two verses where no textual variation occurs.

Acts 7:30

“And when forty years had passed, an Angel of the Lord appeared to him in a flame of fire in a bush, in the wilderness of Mount Sinai.” In this verse, some witnesses read “an Angel of the Lord,” some read “an angel.” Advocates of the Byzantine text regard the phrase “of the Lord” to be significant to the doctrine of Christ. There are two variant readings here; variant 2 has the phrase “of the Lord” and variant 1 lacks it. Figure 4.12 displays the distribution of these variants throughout genealogical history.

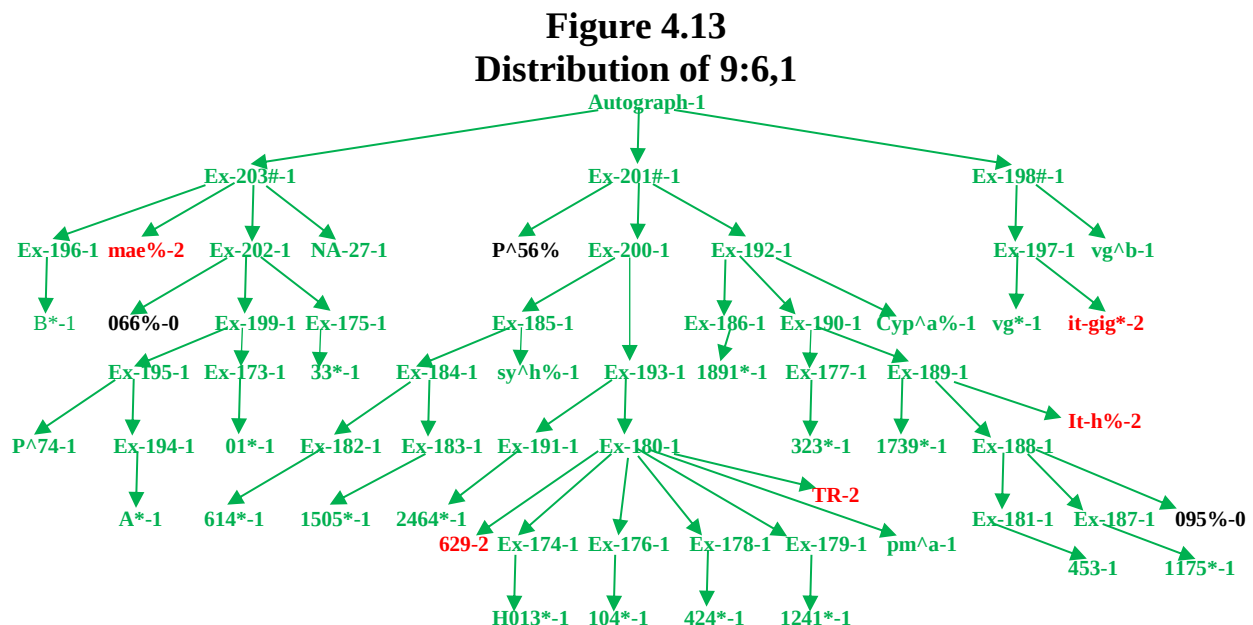

Variant 1 has the consensus of two of the three first-generation recensions: exemplar Ex-203#, the head of the Egyptian text tradition, and exemplar Ex-198#, the head of the Western text tradition; so it was selected as the autographic reading—the phrase was not in the original text. Variant 1 occurs in all the witnesses of the Egyptian text tradition, except those in remote sub-branch headed by third-generation exemplar Ex-175; and it is also in all of the witnesses in the Western text tradition except MS D05*% and its correctors, MS E08* and its correctors, sy^p%;

it occurs also in MS 1175* and its corrector in the seventh generation of the Antiochan text tradition.

The phrase (variant 2) is contained in all the witnesses of the Antiochan text tradition headed by exemplar Ex-201#, except for MS 1175* and its corrector; it also occurs in MS D05*% and its correctors, in E08* and its corrector, along with Old Latin translation it-p% in the Western text tradition. It also occurs in Old Latin translation it-w% and Middle Egyptian translation mae% in the Egyptian text tradition, not shown in the diagram. According to the genealogical evidence, the phrase did not occur in the autograph.

Acts 9:6

“So he, trembling and astonished, said, "Lord, what do You want me to do?" Then the Lord *said* to him”; in this verse, some witnesses contain this passage and some lack it. Supporters of the Byzantine text regard this clause as theologically significant because it supports the deity of Christ, and the clause is missing in many modern translations. There are two variant readings here; variant 1 lacks the clause and variant 2 contains it. Figure 4.13 displays the distribution of these variants throughout genealogical history.

Variant 1 has the consensus of all three the first-generation recensions: Ex-203#, the text from which the Egyptian text tradition was derived, and Ex-201#, the text from which the Antiochan text tradition was derived, and Ex-198#, the text from which the Western text tradition was derived; it was selected as the autographic reading on this basis. It has the support of nearly all the

witnesses in the Egyptian text tradition and nearly all the witnesses of the Antiochan text tradition except Scrivener's *Textus Receptus* (TR), and nearly all the witnesses in the Western text tradition.

Variant 2 occurs only in five Old Latin translations: it-gig*, it-gig^c, it-h%, it-p%, and it-p%; it occurs in Latin Vulgate witness vg^b, and in Middle Egyptian Coptic translation mae. Strangely, it occurs in Scrivener's *Textus Receptus* (TR). Bruce Metzger stated of this passage:

So far as is known, no Greek witness reads these words at this place; they have been taken from 26.14 and 22.10, and are found in codices of the Vulgate . . . The spurious passage came into the *Textus Receptus* when Erasmus translated it from the Latin Vulgate into Greek and inserted in his first edition of the Greek New Testament.¹⁷

It is now known that fourteenth- or fifteenth-century MS 629 contains this passage. It is a sibling sister of the TR along with 29 others; see figure 3.5a in chapter three.

Acts 10:30

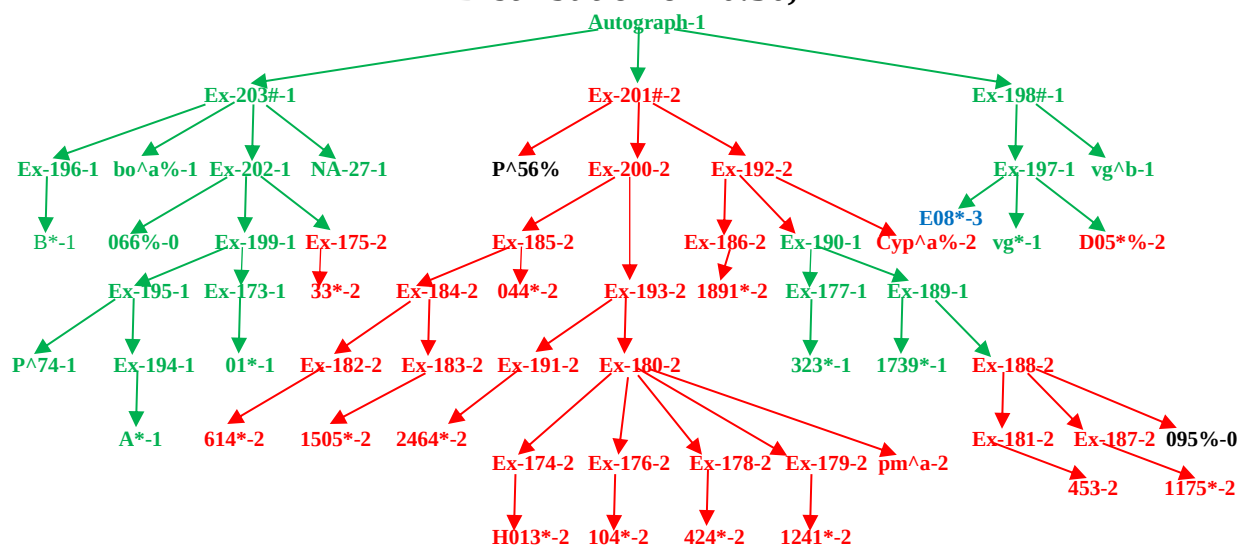

“So Cornelius said, ‘Four days ago I was fasting until this hour; and at the ninth hour I prayed in my house, and behold, a man stood before me in bright clothing.’” In this verse some witnesses have the expression “I was fasting until this hour” and some do not. Supporters of the Byzantine text regard this passage as theologically significant because it supports the doctrine of fasting, and the clause is missing in many modern translations. There are three variant readings here:

- (1) ἑτην ἑνατην προσευχομενος: at this hour I was praying
- (2) νηστεων και την ἑνατην ωραν προσευχομενος: I was fasting and at this very hour I was praying
- (3) νηστεων και προσευχομενος απο εκτης ωρας εως ενατης: I was fasting and praying from the ninth hour until now

Figure 4.14 displays the distribution of these variants throughout genealogical history. Variant 1 has the consensus of two of the three the first-generation recensions: Ex-198#, the text from which the Western text tradition was derived, and Ex-203#, the text from which the Egyptian text tradition was derived; it was selected as the autographic reading on this basis. It has the support of most of the witnesses in the Western text tradition and most the witnesses of the Egyptian text tradition except the witnesses in remote sub-branch headed by third-generation exemplar Ex-175.

¹⁷ Bruce M. Metzger, *A Textual Commentary on the Greek New Testament*, 3rd ed. (New York: United Bible Societies, 1971), p. 362.

Figure 4.14
Distribution of 10:30,2

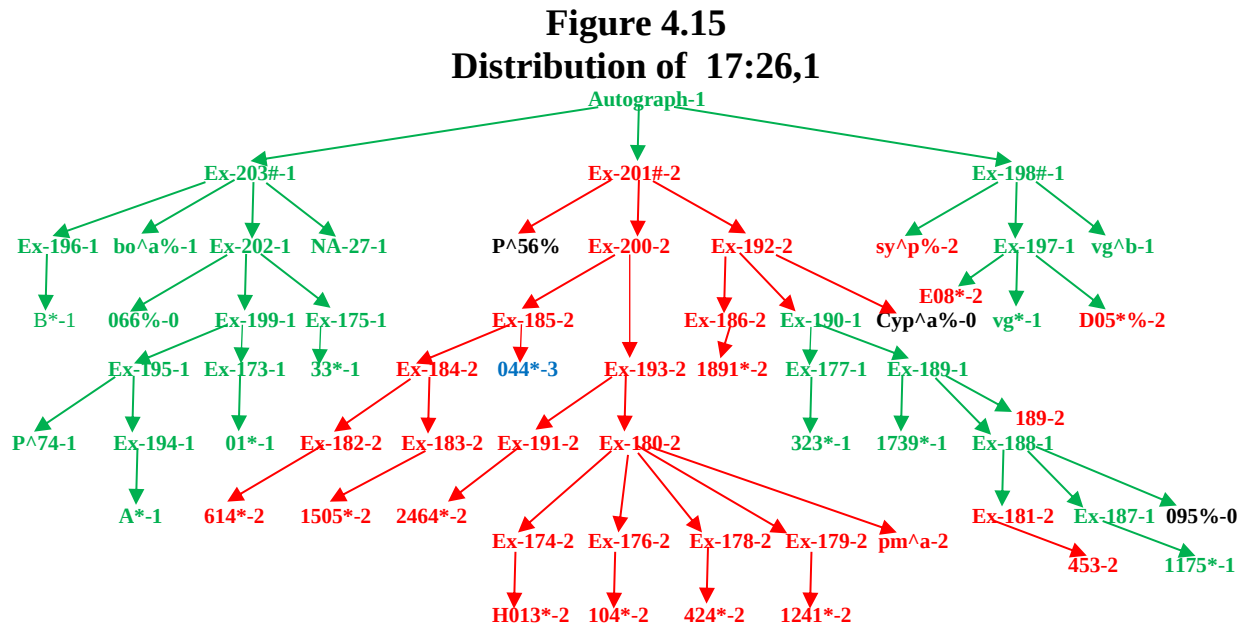

Variant 2 occurs in all the witnesses in the Antiochan text tradition except for those in the sub-branch headed by third-generation exemplar Ex-190, but the reading was restored later in the sub-branch headed by fifth-generation exemplar Ex-188. It also occurs in MS D05*% and its correctors, together with some Old Latin witnesses in the Western text tradition: it-d%, it-e%, it-gig*, it-gig^c, it-p%, it-t%, and it-w%. It occurs in the Syriac translation sy^p%, in Sahidic translations sa^a% and as^b%, as well as Middle Egyptian mae in the Egyptian text tradition; most are not shown in the diagram.

Variant 3 occurs only in MS E08* and its corrector in the Western text tradition. The genealogical evidence indicates that the text of variant 1 was in the autograph; the second variant was very early and was distributed by considerable mixture.

Acts 17:26

“And He has made from one blood every nation of men to dwell on all the face of the earth, and has determined their preappointed times and the boundaries of their dwellings.” Some witnesses have the word “blood” in their text and some lack it. Supporters of the Byzantine text regard this passage as theologically significant because it supports racial and religious integration, and the word is missing in many modern translations. Modern translations supply the word “man” in order to clarify what the word “one” references. There are three variants here: variant 1 lacks any

word, variant 2 has the word “blood,” and variant 3 has the word “mouth.” Figure 4.15 displays the distribution of these variants throughout genealogical history.

Variant 1 has the consensus of two of the three the first-generation recensions: Ex-198#, the text from which the Western text tradition was derived, and Ex-203#, the text from which the Egyptian text tradition was derived; it was selected as the autographic reading on this basis. It has the support of the principal witnesses in the Western text tradition and all the witnesses of the Egyptian text tradition, together with witnesses in the sub-branch of the Antiochan text tradition headed by third-generation exemplar Ex-190, except for MS 189 and its sixth-generation sub-branch headed by exemplar Ex-181.

Variant 2 occurs in all the witnesses of the Antiochan text tradition headed by exemplar Ex-201# except those in sub-branch headed by third-generation exemplar Ex-190. It occurs in MS D05*% and its correctors, MS E08* and its corrector in the Western text tradition, together with Old Latin witnesses it-gig* and its corrector and Syriac sy^p%.

Variant 3 occurs only in the witnesses in a sub-branch of the Antiochan text tradition headed by third-generation exemplar Ex-185, consisting only of MS 044* and its corrector. The genealogical evidence indicates that the autograph had no word at this place.

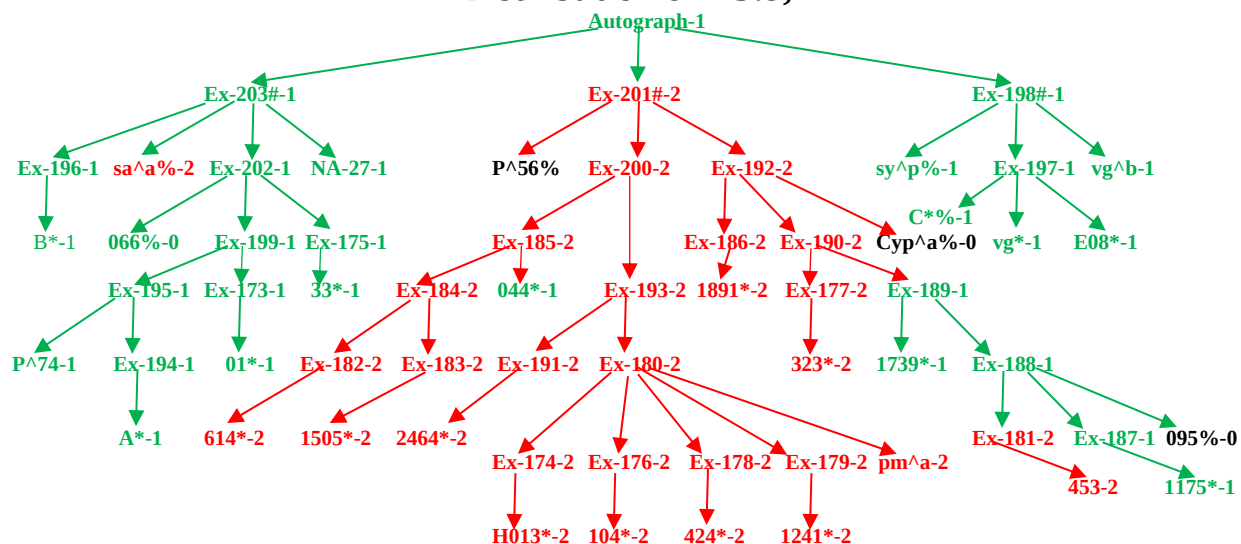

Acts 23:9

“Then there arose a loud outcry. And the scribes of the Pharisees' party arose and protested, saying, ‘We find no evil in this man; but if a spirit or an angel has spoken to him, let us not fight against God.’” Some witnesses have the clause “let us not fight against God,” and some lack it. Variant 1 lacks the clause and variant 2 has it. Figure 4.16 displays the distribution of these variants throughout genealogical history.

Variant 1 has the consensus of two of the three the first-generation recensions: Ex-198#, the text from which the Western text tradition was derived, and Ex-203#, the text from which the Egyptian text tradition was derived; it was selected as the autographic reading on this basis. It has the support of all the witnesses in the Western text tradition and nearly all the witnesses of the Egyptian text tradition, together with the witnesses in one sub-branch of the Antiochan text tradition headed by fourth-generation exemplar Ex-189. It also occurs in MS 44* and its corrector along with Syriac translation sy^h, sibling daughters of third-generation exemplar Ex185.

Variant 2 occurs in all the witnesses in the Antioch text tradition except those in the sub-branch headed by fourth-generation exemplar Ex-189; the reading was corrected back to the autographic reading in sixth-generation exemplar Ex-181. It also occurs in the Sahidic translations sa^a and sa^b in the Egyptian text tradition. The genealogical evidence indicates that the autographic text lacked this clause.

Figure 4.16
Distribution of 23:9,2

Tracing Any Variant

The above studies trace the history of variants of particular interest using the computer program Lachmann-10. But one may trace the history of any other desired variant using the information in Appendices D, F, and H. For example, to trace the history of the five variants at variation unit 1279 at 21:13,1, the only place in the text where the fifth variant proved to be the autographic reading, take the following steps:

Step 1: Using Appendices D and F, find the variant readings.

Appendix F says

1279.1	21:13,1.1	Ex-205\$	‘τοτε ἀπεκριθη ο Παυλος
1279.2	21:13,1.2	Ex-201#	απεκ. δε ο Π.
1279.3	21:13,1.3	Ex-192	απεκ. δε ο Π. και ειπεν
1279.4	21:13,1.4	Ex-206\$	ειπεν δε προς ημας ο Π.

Variant 1 is ‘τοτε ἀπεκριθη ο Παυλος “then Paul answered,” initiated in exemplar Ex-205\$.

Variant 2 is απεκ. δε ο Π. “but Paul answered,” initiated in exemplar Ex-201#.

Variant 3 is απεκ. δε ο Π. και ειπεν “but Paul answered and said,” initiated in exemplar Ex-192.

Variant 4 is ειπεν δε προς ημας ο Π. “but Paul said to us,” initiated in exemplar Ex-206\$.

Appendix D says

1279.5	21:13,1.5	τοτε απεκ. ο Π. και ειπεν	0.67
--------	-----------	---------------------------	------

That is, the autographic reading is the fifth variant (1279.5), τοτε απεκ. ο Π. και ειπεν “then Paul answered and said,” and that its probability is 0.67 (67%).

Step 2: Using Appendix H, find where these variants were initiated in the history of the text.

Appendix H says

1279. 1	21:13,1. 1	[C*%]<3>; [NA-27]<2>; [bo^a%]<2>; [bo^b%]<2>; [Ex-188]<5>; [Ex-196]<2>; Ex-205\$<1>;
1279. 2	21:13,1. 2	[453]<7>; Ex-201#<1>;
1279. 3	21:13,1. 3	Ex-192<2>;
1279. 4	21:13,1. 4	[D05*%]<3>; [D05^c%]<3>; [D05^1%]<3>; [D05^2%]<3>; [it-gig*]<3>; [it-gig^c]<3>; Ex-206\$<1>;
1279. 5	21:13,1. 5	Autograph;

That is, the first variant was initiated in virtual exemplar Ex-205\$, and by mixture it was subsequently introduced in [C*%]<3>; [NA-27]<2>; [bo^a%]<2>; [bo^b%]<2>; [Ex-188]<5>; and [Ex-196]<2>. The second variant was initiated in exemplar Ex-201#<1>, and by mixture in [453]<7>. The third variant was initiated only in exemplar Ex-192. The fourth variant was initiated in virtual exemplar Ex-206\$ and then by mixture in [D05*%]<3>; [D05^c%]<3>; [D05^1%]<3>; [D05^2%]<3>; [it-gig*]<3>; and [it-gig^c]<3>. The fifth variant was initiated only in the autograph.

Step 3: copy figure 3.1 from chapter 3 on a separate sheet of paper, as on the next page, and write the variant numbers at the places on diagram where each variant was initiated; use green for the autographic reading (5), red for the first variant (1), blue for the second variant (2), orange for the third variant (3), and purple for the fourth variant (4) as illustrated in figure 4.17.

Step 4: Using its designated color, let each initiated variant extend by inheritance to all its descendants down to its extant terminal witnesses, or until changed by a new initiation, as shown in figure 4.18. Witnesses marked with % are fragmentary; their readings are often lacking; they may be ignored in this step.

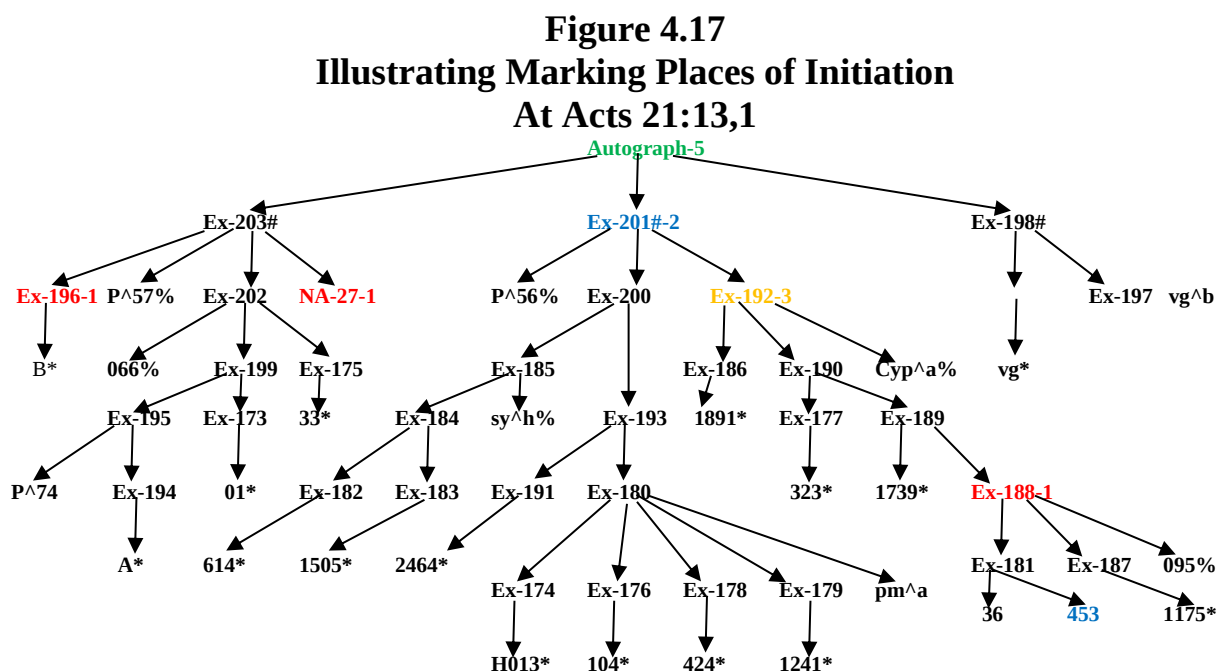

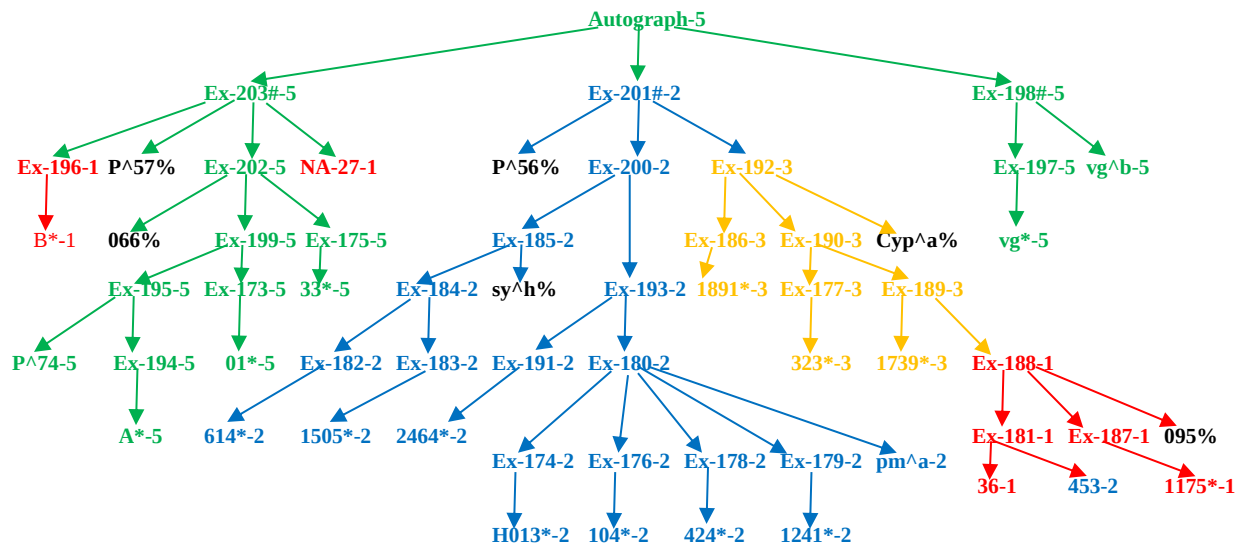

Figure 4.18 indicates that Variant 5 has the consensus of two of the first-generation recensions: exemplar Ex-198# the head of the Western text tradition, and exemplar Ex-203# the head of the Egyptian text tradition; so, it was selected as the autographic reading.

Figure 4.18
Illustrating Extending Inherited Readings
at Acts 21:13

Variant 1 occurs only in the witnesses in one sub-branch of the Egyptian text tradition headed by second-generation exemplar Ex-196, consisting of Codex Vaticanus (B*) and its correctors. The reading of NA-27 was selected on the basis of this small number of witnesses presumably on the basis of internal evidence, although Metzger did not comment on this unusual decision. It also occurs in the witnesses in the sub-branch of the Antiochan text tradition headed by fifth-generation exemplar Ex-188.

Variant 2 occurs in all the witnesses in the Antiochan text tradition headed by exemplar Ex-201# except those in the sub-branch headed by second-generation exemplar Ex-192. Variant 3 occurs in all the witnesses in the sub-branch of the Antiochan text tradition headed by second-generation exemplar Ex-192, except for most of those witnesses in the sub-branch headed by fifth-generation exemplar Ex-188. Variant 4 occurs in only in fractional Latin witnesses not shown in the diagram.

Conclusion

This chapter identifies the autographic readings of the Greek text of the Acts of the Apostles and how they were determined. It provides the genealogical history of each variant reading, locating where each reading originated, and describing how each reading was distributed by inheritance throughout that history. It discusses the principal recensions, locating their origin in history, and identifying their characteristic readings. It discusses doctrinally significant passages and

shows that the variant readings there do not alter the orthodoxy of Christian doctrine expressed in the earliest form of the text, but appear in peripheral, inconsequential branches.

CHAPTER 5

SUMMARY AND CONCLUSIONS

The genealogical software and the theory it emulates were successful in reconstructing a genealogical history of the Greek text of the Acts of the Apostles. The software made use of a modified version of the textual apparatus in the 27th edition of the Nestle-Aland Greek New Testament. Using index numbers to represent the variant readings in the witnesses to the text, the computer constructed a kind of genetic code for each witness based on its unique combination of variant readings. Then employing the basic principles of heredity, a relatively simple tree diagram was constructed representing the genealogical history of the text.

Heredity is the underlying principle of genealogical relationships. Because manuscripts of a text were copied from exemplars of earlier generations of the text, of necessity they have genealogical relationships. For manuscripts, quantitative affinity (consensus of variant readings) and a sibling gene, coupled with historical directionality constitute the variables for computing genealogical heredity. For variant readings, on the other hand, the domain of heredity is limited to their place of variation. There, heredity is determined by consensus among sibling sister witnesses and by what I call evidence of variant inheritance.¹ The software uses the heredity of manuscripts and the heredity of variant readings to guide the reconstruction of a historical genealogical tree diagram.

Mixture occurred when a scribe copied from more than one exemplar—a primary parent exemplar and one or more secondary exemplars. The readings of a manuscript were inherited from its primary parent exemplar or borrowed by mixture from its secondary parent exemplars; otherwise a variant was newly introduced by scribal error (either accidentally or intentionally) thus initiating a new line of heredity. A good number of witnesses had no mixture, but considerable

¹ At any place in the genealogical history of a text, the evidence of a variant's inheritance is its presence in other witnesses of the same or earlier generations.

mixture occurred in others. As it turned out, the presence of mixture does not affect the reconstruction of the genealogical tree, but it is very useful in identifying the places in genealogical history where variants were initiated, in tracing the genealogical history of variants, and in identifying recensions.

The Effect of Recensions

The genealogical theory and associated software were designed to reconstruct the genealogical history of texts where the copying process was simple, without any radical discontinuities. It was anticipated that the initiation and transmission of textual variants would be gradual and that the tree would develop three or four main branches corresponding to the commonly accepted text types. However, the theory and software also made provision for radical dislocations if they perchance had occurred. As it turned out radical dislocations did occur in the form of some major and minor recensions.² Furthermore, the most radical recensions took place in the earliest generation that genealogical relationships could be reasonably determined. This information indicates that in the earliest days of New Testament history its text was in flux and its genealogical history for that time period cannot be confidently reconstructed. These details could have resulted in disappointment except that the earliest recensions, though diverse from one another, nevertheless had sufficient consensus to identify the autographic readings.

Binary Branches

The genealogical tree diagram reconstructed by the software is often binary, that is, there are only two branches where the tree divides. Table 3.3 in Chapter 3 indicates that 26 out of 32 branches were binary. Critics of the genealogical theory claim that the methodology fails whenever there are only two branches, because no consensus can exist where there are only two alternatives. That would be true except for the principle of deferred ambiguity. In such cases, where ambiguity exists in one witness, its sister has the inherited reading.

A reading has evidence of variant inheritance when it is also found in witnesses of earlier generations. A reading will not be found in any witness dating in a generation prior to the one in which the reading first originated. Autographic readings have continual evidence of variant inheritance; all others acquire that evidence in the generation of their origin subsequent to the autograph. The evidence of variant inheritance usually decides between two equally probable readings; but

² A recension is recognized by the introduction of a larger number of variants than normal in a witness, usually also accompanied by a larger number of secondary parent exemplars—mixture.

where even that fails, a final appeal can be made indirectly to internal evidence. So, a binary construction does not turn out to be a crucial weakness. Still, some may be concerned that the earliest history of the text is determined by such diverse witnesses. However, Table 4.4 of Chapter 4 indicates that 95.03% of the textual decisions made in the reconstruction of the historical tree diagram were made on the basis consensus and deferred ambiguity; so, diversity was not a significant deterrent. Furthermore, Table 4.5 of Chapter 4 indicates that 86.28% of the autographic readings were decided on the basis of consensus.

So What!

Someone may ask: “After all those painstaking computations, what is now known that was not already known by means of traditional textual critical methodology?” The answer should be self-evident, but for the sake of review, here is a list of the more prominent bits of knowledge the computations provide:

- (1) A rigorous construction of the genealogical history of the witnesses to the text, something that did not previously exist.
- (2) A precise account of the genealogical history of each variant reading, including its place of origin and subsequent distribution, something that did not previously exist.
- (3) The identity of the autographic readings based on an unbiased implementation of the laws of heredity, together with the mathematical probability of each one, instead of educated estimates.
- (4) An accurate description of the content and structure of the traditional text types, and their internal and external genealogical relationships, instead of educated estimates.
- (5) Hopefully a better understanding of the laws of heredity as they apply to manuscripts.

The laws of heredity have been applied to the factual evidence derived from the existing witnesses to the text of Acts. They have been applied with mathematical precision apart for human intervention and bias. Hopefully the results provide a better understanding of the history of the text. In either case, no claim is made that the derived history and the text identified as autographic are free from uncertainty. The results are dependent on the validity of the underlying theory and its software implementation. Undoubtedly the future will bring forth improved theory and implementation.

APPENDIX A

List of Extant Witnesses to the Greek Text of the Acts of the Apostles

This appendix contains a list of the extant witnesses to the Greek text of the Acts of the Apostles. For each witness it lists its name, date, language, content (references where readings exist), number of readings, and percentage of completeness. In the content column, a verse is counted as long as it has at least one extant reading.

P^8%	350	0	4:31-5:9; 6:1-6, 8-15	54	3.25%

APPENDIX B

List of the References Associated with Each Place of Variation

This appendix contains a list of the references associated with each place of variation. The number to the left of the hyphen is the index number of the place of variation, and the numbers to the right constitute the reference. The reference indicates the chapter, verse, and ordered rank of the place of variation in that verse. For example, 10-1:6,2 indicates that the 10th place of variation occurs in chapter 1, verse 6, and is the 2th place of variation in that verse.

Appendix C

The Genealogical Tree Diagram of

The Textual History of the Acts of the Apostles

This appendix contains the tree diagram of the genealogical history of the Greek text of the Acts of the Apostles. The tree is displayed vertically rather than horizontally. That is, the autograph in the upper left corner with succeeding generations indented from the left progressively downward. Sibling daughter descendants are linked by vertical lines. For example, the first-generation descendants of the autograph are Ex-198#,⁵³ Ex-201#, and Ex-203#. Only the primary exemplars are displayed, so no mixture connections are shown. The diagram spills over onto succeeding pages, but the lower-case letters at the page breaks show where the lines from one page connect to those of the next.

The format of the information on each line is as follows: (1) the name of the witness; (2) the genealogical affinity of the witness with its primary parent exemplar, enclosed in square brackets []; (3) generation from the autograph, enclosed in angular brackets <>; (4) date, enclosed in curly brackets {}; (5) the number of variants the witness differs from its primary parent, enclosed in slant marks //; (6) The number of variants in the sibling gene; and (7) the number of parents the witness has.

⁵³ The names of exemplars created by the software have the prefix “Ex-” followed by a number; extant witnesses have the names provided in NA-27 as modified for compatibility with the software (discussed in Chapter Two of Volume 1).

Appendix D

List of Autographic Readings

The Acts of the Apostles

This appendix contains the list of autographic readings for the Greek text of the Acts of the Apostles as determined by the genealogical method described in this book. The list contains the index of each place of variation (variation unit), the associated reference, the Greek reading at that place, and the probability that the reading is autographic.

1.1	1:1,1.1	οο	1
2.1	1:2,1.1	τ ομιτ	1
3.1	1:2,2.1	ἄνελημφθη	1
4.1	1:4,1.1	συναλιζομενος	0.67
5.1	1:4,2.1	τ ομιτ	1
6.1	1:4,3.1	τ ομιτ	1
7.2	1:5,1.2	3 1 2 4	1
8.1	1:5,2.1	τ ομιτ	1
9.1	1:5,3.1	τ ομιτ	1
10.1	1:7,1.1	ἔειπεν δε προς αὐτους	1
11.1	1:8,1.1	οἶν	1
12.1	1:9,1.1	εἰπων βλεποντων αὐτων ἐπηρθη και νεφελη υπελαβεν αὐτον	1
13.1	1:10,1.1	ἐσθησεσι λευκαις	0.67
14.1	1:11,1.1	ἐμβλεποντες	0.5
15.1	1:11,2.1	□εις τον οὐρανον	1
16.1	1:13,1.1	Ἰωαννης και Ἰακωβος και Ἀνδρεας	0.67
17.1	1:14,1.1	τ ομιτ	0.67
18.1	1:14,2.1	τ ομιτ	1
19.1	1:14,3.1	ἸΝαριαμ	1
20.1	1:14,4.1	οτου	1
21.2	1:14,5.2	ς συν	0.67
22.1	1:15,1.1	ἀδελφων	0.67
23.2	1:15,2.2	ως	1
24.1	1:16,1.1	ἔδει	0.67
25.1	1:16,2.1	τ ομιτ	0.67
26.1	1:16,3.1	τ ομιτ	0.5
27.1	1:17,1.1	ἄκαι	1
28.1	1:18,1.1	τ ομιτ	1
29.1	1:19,1.1	τ ομιτ	1
30.1	1:19,2.1	οἶδια	0.67
31.1	1:19,3.1	Ἀκελδαμαχ	0.33
32.1	1:20,1.1	αὐτου	1
33.1	1:21,1.1	τ ομιτ	1
34.1	1:22,1.1	ἔως	1
35.1	1:23,1.1	τ ομιτ	1
36.1	1:23,2.1	ἔστησαν	1
37.1	1:23,3.1	ἸΒαρσαββαν	0.67
38.1	1:25,1.1	τοπον	0.67
39.1	1:26,1.1	αὐτοις	1

40.1	1:26,2.1	συγκατεψηφισθη	1
41.1	1:26,3.1	ἑνδεκα	1
42.1	2:1,1.1	ἐν τῷ συμπληρῶσθαι τὴν ἡμέραν τῆς πεντηκοστῆς ἦσαν πάντες ὄμου	1
43.1	2:1,2.1	τὴν ἡμέραν	0.67
44.1	2:1,3.1	πάντες	1
45.1	2:1,4.1	ὄμου	0.67
46.1	2:2,1.1	τὸμιτ	1
47.1	2:2,2.1	ὄλον	1
48.1	2:2,3.1	καθημενοὶ	1
49.2	2:3,1.2	εκαθ. τε	1
50.1	2:4,1.1	πάντες	0.5
51.1	2:5,1.1	ἦσαν δὲ εἰς Ἱερουσαλὴμ κατοικοῦντες Ἰουδαῖοι ἄνδρες εὐλαβεῖς	1
52.2	2:5,2.2	ἐν	1
53.1	2:6,1.1	ὅτι	1
54.1	2:6,2.1	ἡκουον	1
55.1	2:6,3.1	ἐν τῇ ἰδίᾳ διαλεκτῷ λαλούντων	1
56.1	2:7,1.1	τὸμιτ	0.67
57.1	2:7,2.1	τὸμιτ	0.67
58.3	2:7,3.3	οὐκ	1
59.1	2:7,4.1	ἅπαντες	0.5
60.1	2:8,1.1	ἐν τῇ ἰδίᾳ διαλεκτῷ	1
61.1	2:9,1.1	Ἰουδαίαν	1
62.1	2:9,2.1	ὅτε	1
63.1	2:11,1.1	Ἀραβες	1
64.1	2:12,1.1	διηποροῦν	0.5
65.1	2:12,2.1	τὸμιτ	1
66.1	2:13,1.1	τὸμιτ	0.67
67.1	2:14,1.1	τὸμιτ	1
68.1	2:14,2.1	ἑνδεκα	1
69.1	2:14,3.1	τὸμιτ	1
70.1	2:14,4.1	ἀπεφθεγξάτο αὐτοῖς	1
71.1	2:14,5.1	ἐνωτισσάσθε	1
72.1	2:15,1.1	ἔστιν γὰρ ὥρα τρίτη τῆς ἡμέρας	0.67

Appendix F

Places Where the Non-Autographic Variants Were Initiated

Only Once in the Textual History of Acts

Arranged in Order by Reference

This appendix lists the place in the genealogical history of the text of the Acts of the Apostles where each non-original textual variant was first initiated, arranged in order by reference. For each variant, the table lists (1) the place of variation in the text where the variation occurred, (2) the associated reference, (3) the exemplar or extant witness in which the variant was initiated, and (4) the text of the variant. For example, the following line means:

4.3	1:4,1.3	Ex-201#	συνανλιζ—
-----	---------	---------	-----------

- (1) 4.3 refers to the third variant at variation unit four.
- (2) 1:4,1.3 is the reference where this place of variation occurs: chapter 1, verse 4, the first place of variation in this verse, the third variant there.
- (3) This variant was initiated in exemplar Ex-201#.
- (4) The variant reads: συνανλιζ—

Since the variant was first initiated in an exemplar, one can presume that the variant was inherited by all of the descendants of that exemplar (Ex-283#) unless otherwise altered in one of its subsequent branches.

The following line means:

10.3	1:7,1.3	B ²	ειπ. ουν πρ. αυτ.
------	---------	----------------	-------------------

- (1) 10.3 refers to the third variant at variation unit ten.
- (2) 1:7,1.3 is the reference where this place of variation occurs: chapter 1, verse 7, the third place of variation in this verse, the second variant there.
- (3) This variant was initiated in terminal witness MS B²
- (4) The variant reads: ειπ. ουν πρ. αυτ.

Since the variant was initiated in a terminal witness, it is a singularity with no inheritance.

The following line means:

1.2	1:1,1.2	Ex-205\$	° ομιτ
-----	---------	----------	--------

- (1) 1.2 refers to the second variant at variation unit one.
- (2) 1:1,1.2 is the reference where this place of variation occurs: chapter 1, verse 1, the first place of variation in this verse, the second variant there.
- (3) This variant was initiated in exemplar Ex-205\$, a virtual exemplar, a source of mixture.
- (4) The variant reads: ° ομιτ omit.

Appendix G

Places Where the Non-Autographic Variants Were Initiated

in the Textual History of Acts

Arranged in Order by Witness

This appendix lists the place in the genealogical history of the text of the Acts of the Apostles where each non-original textual variant was first initiated, arranged in order by witness. For each witness, the table lists (1) the exemplar or extant witness in which the variant was initiated, (2) the place of variation in the text where the variation occurred, (3) the associated reference, (4) the text of the variant. For example, the following line means:

P ³³ %	370.2	7:13,3.2	ο omit
-------------------	-------	----------	--------

- (1) This variant was initiated in MS P³³%, a fragment.
- (2) 370.2 refers to the second variant at variation unit 370.
- (3) 7:13, 3.2 is the reference where this place of variation occurs: chapter 7, verse 13, the third place of variation in this verse, the second variant there.
- (4) The variant reads: ο omit.

Since the variant was first initiated in a manuscript, it is a singularity having no prior history.

The following line means:

Ex-175	943.3	16:18,3.3	ἐξελθε
--------	-------	-----------	--------

- (1) This variant was initiated in exemplar Ex-175.
- (2) 943.3 refers to the third variant at variation unit 943.
- (3) 16:18,3.3 is the reference where this place of variation occurs: chapter 16 verse 18, the third place of variation in this verse, the third variant there.
- (4) The variant reads: ἐξελθε it came out.

Since the variant was first initiated in an exemplar, one can presume that the variant was inherited by all of the descendants of that exemplar (Ex-175) unless otherwise altered in one of its subsequent branches.

Appendix H

Every Place Where a Variant is Initiated

in the Textual History of Acts

Arranged in Order by Reference

Total = 3783

This appendix lists every place a variant is introduced into the textual history of Acts either initially or later by mixture. The information is arranged in order by reference as follows: (1) place of variation, (2) reference, (3) witness(es) where variant was initiated. Those witnesses enclosed in square brackets [] are places where the variant was introduced by mixture; those not enclosed are where the variant first originated. The number enclosed in <> is the generation of the preceding witness. For example, the following line means:

1.1	1:3,1.1	Autograph;
-----	---------	------------

(1) 1.1 refers to the first variant in variation unit 1.

(2) 1:3,1.1 is the reference where this place of variation occurs: chapter 1, verse 3, the first place of variation in this verse, the first variant there.

(3) Autograph means that the variant was initiated in the autograph and nowhere else.

Since the variant was first initiated in an exemplar, one can presume that the variant was inherited by all of the descendants of the autograph unless otherwise altered in one of its subsequent branches.

The following line means:

1.2	1:1,1.2	[D05*%]<3>; [D05^c%]<3>; [D05^1%]<3>; [D05^2%]<3>; [Ex-196]<2>; Ex-205\$<1>;
-----	---------	---

(1) 1.2 refers to the second variant in variation unit 1.

(2) 1:1,1.2 is the reference where this place of variation occurs: chapter 1, verse 1, the first place of variation in this verse, the second variant there.

(3) The variant was first initiated in first-generation virtual exemplar Ex-205\$, and subsequently initiated by mixture from [Ex-196]<2> to [D05*%]<3>; [D05^c%]<3>; [D05^1%]<3>; [D05^2%]<3>.

Since the variant was first initiated in a virtual exemplar, one may safely assume that the variant randomly happened by scribal accident and not by actual mixture in a context of actual genealogical descent.

GLOSSARY OF TERMS

Boldfaced words in the following definitions refer to other terms defined in this glossary.

Affinity: the degree to which two **witnesses** to a text have the same readings. Affinity consists of two components: **Quantitative Affinity** and **Genetic Affinity**.

Autograph: The original document written by the hand of its author or by his secretary to whom he dictated its text.

Autographic Text: The words originally written in an original document.

Commonness: A measure of the degree to which **witnesses** to a given text share the same value of a genetic characteristic of the text. See Commonness of Place of Variation and Commonness of Reading.

Commonness of Place of Variation: The degree to which two **witnesses** to a given text have the same **places of variation** regardless of the **readings** at those places—that is, they share a common portion of the text. The Commonness of Place of Variation of A with B = the number of **places of variation** where both A and B have a **reading**, where A and B are **witnesses** to the same text. This measure is important for dealing with fragmentary **witnesses**. Two **witnesses** that both have a complete text have 100% Commonness of Place of Variation.

Commonness of Readings: A measure of the degree to which two **witnesses** to a text have the same **readings**. It is calculated as follows: The Commonness of Readings of A with B = the number of **places of variation** where both A and B have the same **reading**, where A and B are **witnesses** to the same text.

Completeness: A measure of how much of a text a particular **witness** contains. It is calculated as follows: The Completeness of A = (the number of **places of variation** A has of the text) ÷ (the total number of **places of variation** in the text), where A is a **witness** to the text. This measure is important for dealing with fragmentary **witnesses**.

Content: A list of the **places of variation** a **witness** contains, expressed in terms of references (chapter and verse)—that is, that portion of the text the **witness** contains.

Deferred Ambiguity: The principle of deferred ambiguity states that when consensus fails to recover a reading of an exemplar being reconstructed, the sister of that exemplar will have the inherited reading in the next prior generation.

Exemplar: A **witness** from which other **witnesses** have been copied. The software creates exemplars in the process of reconstructing the genealogical history of a text.

Fragment: A **witness** that is missing part of its text due to damage or deterioration.

Genetic Affinity: see **Quantitative Affinity**.

Genetic Dominance: A **reading** has genetic dominance as long as it is inherited by the **descendants** of the exemplar in which it first occurs. It loses genetic dominance at any place in the genetic history of the exemplar in which it occurs where an alternate reading replaces it.

Heredity: That characteristic of a **reading** correctly copied into a daughter **witness** of the **exemplar** in which the reading is found.

Inheritable Variant: A variant initiated by one of the ancestor exemplars of a witness.

Inheritance: That characteristic of a **reading** correctly copied from the parent **exemplar** of the **witness** in which the reading is found.

Inheritance Persistence: The inheritance persistence of a witness is the ratio of the number inheritable variants to the number of actually inherited ones.

Lectionary: A **manuscript** edited and arranged in sections assigned for reading in the Church at specified times in the liturgical calendar—something like a hymnbook.

Majuscule: A **manuscript** written in all capital letters.

Manuscript: A handwritten copy of a text made from an earlier copy (**exemplar**). The term is sometimes used as a synonym of **witness**.

Minimal Reading: The reading of a witness that occurs least often in the working database.

Minuscule: A **manuscript** written in lower case characters.

Papyri: **Manuscripts** copied on paper made from papyrus. They are usually rather early, but mostly fragmentary.

Parent Exemplar: The **manuscript** from which another **manuscript** was directly copied.

Place of Variation: A place in a text where the **witnesses** to the text have different **readings**. In the data base, each place of variation is assigned a sequential index number in order to distinguish them from one another; each one also has assigned to it the chapter and verse where it occurs in the text.

Primary Parent: The **parent exemplar** of a **witness** from which it derives most of its readings, and its place in the tree diagram that maps the genealogical history of the text. A witness has only one primary parent exemplar.

Quantitative Affinity: A measure of the degree to which **witnesses** to a given text are genetically related. The mutual quantitative affinity between two witnesses is the inverse ratio of the number of places the two witnesses have the same readings to the number of places their readings are different.

Reading: At each **place of variation** in a text, the **witnesses** have different words. The words contained in a given witness at a particular **place of variation** constitute the *reading* of that witness at that place. The reading may be a word, phrase, sentence, verse, etc., or nothing at all (an omission).

Recension: A recension is understood to be a **witness** derived from multiple sources and having a significant number of variations from its **primary parent exemplar**. A recension was a deliberate alteration of a text tradition for the purpose of correction or improvement. A recension occurred when a Christian community noted that their Bibles (**manuscripts**) had different **readings**, and there was an attempt to recover the readings of the **autograph**. This likely took place under the authority of the leadership of the community and was carried out by competent scribes. It is possible that in some recensions some of the corrections were made to strengthen the doctrines of the community.

Secondary Descendant: A descendant of a **secondary parent** functioning as a source of mixture for the given descendant.

Secondary Parent: A **parent exemplar** of a witness other than the **Primary Parent Exemplar**. Secondary parents are the sources of mixture for their **secondary descendants**.

Siblings: Sisters, first generation descendants (copies) of the same **exemplar**.

Sibling Gene: The collection of **minimal readings** a **witness** has that occur only in it and its **sibling** sisters. These are the readings where the text of the parent exemplar of the siblings differs from the text of its genealogical ancestors.

Stemma: A tree diagram of the genealogical relationships of the witnesses to the text of an ancient literary composition.

Stemastics: Stemastics is the method used for recovering the original text of the ancient Greek and Latin classics, also known as the family-tree method.

Uncial: A **manuscript** written in all capital letters.

Variant Heredity: The characteristic of variant readings that provides a measure of the likelihood that a given reading in a particular witness A has been inherited from another witness B in an earlier generation. It is quantified as the **genetic distance** between witness A containing the given reading and another witness B in an earlier generation containing the same reading. The witness B having the least genetic distance from witness A is the closest near relative of A with respect to the given reading. A reading has no variant heredity until after it is first initiated somewhere in the genealogical history of the text.

Variant Reading: See *Reading*.

Variation Unit: See *Place of Variation*.

Version: A translation of a document into a language other than that of the original document itself.

Virtual Exemplar: An **exemplar** created by the software to account for same-generation mixture. These exemplars do not contribute to the primary structure of the tree diagram.

Witness: A **manuscript** of a document in its original language, or a translation of that document into another language, or a quotation of the text of a **manuscript** or translation.
