## **CHAPTER 1**

### **INTRODUCTION**

This book is the fourth in a series of studies regarding the genealogical history of the text of the Greek New Testament. Volume 1 provided the genealogical history of the Greek text of the Gospel of Matthew; this volume does the same for the Gospel of John. The first volume provides an introduction to textual criticism, a review of the various textual critical theories and methodologies, a description of a genealogical theory of textual criticism along with its methodology. Readers not familiar with that volume should read at least the first four chapters of that study before going further, because this work presumes the reader has that informed background. What follows is a brief summary of those chapters.

#### ***Textual Criticism***

Textual criticism is the branch of literary science which studies surviving copies of ancient literature<sup>1</sup> with the intent of determining the original form of a literary composition.<sup>2</sup> The problem is that surviving copies of a composition differ because of scribal errors accumulated during the copying history of the composition. At certain places in the text of a composition, existing copies may differ, one having this reading, another having that reading, and yet another having the reading originally written by the author. Such places are called places of variation, and such differing readings are called textual variants. Every place of variation has at least two textual variants.

Because every manuscript is a copy of some earlier copy (exemplar), intuitively one imagines the history of the manuscripts of a composition to be like a family tree. So initially textual

---

<sup>1</sup> Literature composed before the invention of printing, copies of which exist only in handwritten documents. A handwritten copy is referred to as a manuscript.

<sup>2</sup> The original text of a composition, that is, the actual words written by the hand of its author, is referred to as its autographic text.

scholars of classical literature took this approach with some measure of success. However, when it came to the text of the Greek New Testament, scholars despaired and regarded the genealogical approach as much too complex because of the large number of manuscripts and large number of variants. So, various theories and methodologies were developed to work with the variants at each place of variation to decide which one is more likely original. But with the development of high-speed computers, the complex data processing is no longer a problem; all that is needed is a viable genealogical theory together with its associated programable methodology. That's where this project came on the scene.

The present genealogical theory is based on several known facts about the relationship of manuscripts and variant readings. (1) It is a fact that the variants in a manuscript consist of all the uncorrected scribal errors of its ancestral exemplars; this collection of variants may be regarded as the genealogical history of the manuscript, and may be likened to its DNA code. In addition, the variants introduced by the parent exemplar of a manuscript may be regarded as its sibling gene. So, every manuscript has its own DNA and sibling gene, and these data are recoverable from the manuscript database. (2) Sibling manuscripts may be identified by mutual sibling genes, or by greatest quantitative affinity,<sup>3</sup> or by both. (3) Sibling manuscripts are daughters of the same parent exemplar the readings of which may be recovered from the consensus of its daughters' readings, except where no consensus exists. Sibling daughter manuscripts inherit all the readings of their parent exemplar except where their own scribes initiate a new one. In case of ambiguity (where no consensus exists), one variant will have been inherited and the other will have been newly initiated. Inherited variants have history and may be identified by the principle of delayed ambiguity,<sup>4</sup> whereas newly initiated variants have no history and fail the test of delayed ambiguity. (4) A reconstructed exemplar may stand in place of all its descendants in the database, and function as their representative in that stage of reconstructing the genealogical history. (5) Iteration of the above steps will converge genealogical stemma into a single exemplar representing the autographic text. The actual methodology as described in the first volume is more complex than the above, but the above is sufficient to describe the basic principles.

---

<sup>3</sup> Quantitative affinity is a measure of how similar two manuscripts are to one another.

<sup>4</sup> The principle of delayed ambiguity says that the inherited variant will be a reading of the grandfather exemplar when it develops.

### ***The Problem of Mixture***

Mixture occurred when a scribe copied from more than one exemplar. Critics of the genealogical method assert that mixture creates an irresolvable complication. But, as it turned out, as far as the reconstructing procedure is concerned, a reading copied from a secondary exemplar is no different than a variant newly initiated by the scribe either by mistake or intent. Both are uninherited from the primary exemplar; the only difference is that a newly initiated variant has no history, whereas a variant borrowed by mixture has a history, but a history outside the genealogical descent of the primary exemplar. So, mixture is not a problem for the reconstruction methodology described above. The sources of mixture in genealogical history may be of interest in some cases. A separate algorithm of the software finds the most likely source of every variant introduced by mixture rather than by scribal error or intent.

### ***The Database Used***

The database used in this project is derived from an expansion of the Nestle-Aland 27<sup>th</sup> edition of the *Greek New Testament*<sup>5</sup> hereafter referred to as NA-27. The variations of the text are listed at the bottom of each page, providing the verse number where the variation occurs, the associated symbol indicating the kind of variation, the alternate readings that occur there, and a list of witnesses<sup>6</sup> that contain the given alternate reading. The list of witnesses is provided in compressed form in order to avoid as much repetition as possible. This compressed form is useful for conserving paper and ink, and is relatively easy for scholars to follow. But the computer software must have every item of data explicitly recorded, that is, there must be a record of every witness to the text under study, and a record of which variant reading each witness has at every place of variation. This necessity requires the NA-27 database to be unpacked and expanded. Until recently the NA-27 database existed only in printed form, and expanding the data into the form needed by the genealogical software was a complex and time-consuming task.<sup>7</sup> However, the

---

<sup>5</sup> *Novum Testamentum Graece* (Stuttgart: Deutsche Bibelgesellschaft, 1997).

<sup>6</sup> The witnesses consist of individual manuscripts, translations, and patristic quotations.

<sup>7</sup> All my prior research with the genealogical software was done with data manually extracted from the already expanded database in the United Bible Society's *Greek New Testament*.

database is now available in digital electronic form in the *Stuttgart Electronic Study Bible*.<sup>8</sup> That form of the database is capable of being expanded and unpacked electronically.

The expanded database consists of two separate files, one containing a list of every witness together with its name, date, language, and content. The second file is a list of every place of variation in the NA-27 database, the chapter and verse number where the variation occurs, the Greek text of each variant at that place of variation, along with a list of witnesses containing the given variant.

The present program, called Lachmann-10 herein, is written in the Turbo Pascal 7.0 programming language intended for IBM compatible machines with extended memory. The size of the problems it can handle is flexible and is limited only by the amount of RAM available and the speed of the machine [up to a maximum of 2,000 variation units and 2,000 manuscripts]. Large problems require a reasonable amount of time to converge on a solution. The next chapter describes the genealogical history of the extant witnesses to the Greek text of the Gospel of John.

## CHAPTER 2

### WITNESSES TO THE TEXT OF JOHN

The witnesses<sup>1</sup> to the text of the Gospel of John used in this study are those derived from the electronic form of the textual apparatus of the NA-27 edition of the Greek New Testament as contained in the *Stuttgart Electronic Study Bible*<sup>2</sup> as edited and modified for the purposes of this project. They consist of 217 existing witness<sup>3</sup> of various types:

|                            |    |
|----------------------------|----|
| (1) Papyrus manuscripts    | 31 |
| (2) Uncial manuscripts     | 73 |
| (3) Minuscule manuscripts  | 47 |
| (4) Lectionary manuscripts | 3  |
| (6) Latin Versions         | 22 |
| (7) Egyptian Versions      | 8  |
| (8) Syriac Versions        | 4  |
| (14) Greek Church Fathers  | 16 |
| (15) Latin Church Fathers  | 8  |

The witnesses to the text of an ancient document must have several characteristics before a reasonably reliable reconstruction of its genealogical history can be made. Among these are (1) number of witnesses, (2) date, (3) completeness, (4) limited variableness, (5) commonness of text, and (6) genealogical affinity. These characteristics of the available witnesses to the text of John

---

<sup>1</sup> I use the term witness because the reconstruction of genealogical history derives evidence not only from extant manuscripts but also from ancient translations and quotations from church fathers. In addition, a few printed editions are involved although not for reconstruction purposes.

<sup>2</sup> Christof Hardmeier, Eep Talstra, and Bertram Salzmann, *The Stuttgart Electronic Study Bible* (Stuttgart, Germany: The German Bible Society, 2004).

<sup>3</sup> Appendix A lists all the extant witnesses by name, date, language, content, number of readings, and percentage of completeness.

are discussed below and are shown to be suitable for a reasonable reconstruction of its textual history.

### ***Number of Witnesses***

Contrary to the number of available witnesses to the texts of ancient classical literature, there are approximately 2,328 existing Greek manuscripts of the Gospels, including about 178 fragments.<sup>4</sup> This does not include the witnesses of the ancient translations and church fathers. This study makes use of the 218 witnesses to the Gospel of John recorded in the NA-27 apparatus which includes all the ancient papyri witnesses and most of the existing manuscripts dating before the ninth century and a good sample of those from later times. This number includes the consensus witness of the many manuscripts of the text used in the Greek speaking Byzantine churches together with a number of manuscripts related to the Byzantine text. Also, it contains the consensus witness of the many manuscripts of the Latin Vulgate and the individual witness of four different printed editions of the Vulgate. The various Old Latin translations also are represented by a consensus of a number of manuscripts of each of these individual translations. Consequently, the consensus witnesses bring many additional manuscripts indirectly into the reconstruction process. There is good reason to believe that there are sufficient witnesses to the text of the Gospel of John to reconstruct its genealogical history.

### ***Date***

While it is possible to reconstruct the genealogical history of a text without the benefit of dates, dates are very helpful for accurately locating scribal activity in real history. The dates of the witnesses to John range from the second to the twenty-first centuries.<sup>5</sup> Table 2.1 and its associated graph display the reasonably good distribution of the witnesses by date.

### ***Completeness***

Many of the witnesses are fragmentary, not all their text having survived the passage of time. Only 68 of the 218 witnesses have 96-100% of their text complete, and only 93 have a text

---

<sup>4</sup> Aland and Aland, p. 83.

<sup>5</sup> The witnesses in the 19<sup>th</sup> to the 21<sup>st</sup> centuries are printed editions that do not contribute to the reconstruction of the genealogical history.

80% or more complete; thus, completeness is significant for this study. Table 2.2 and its associated graph display the distribution of completeness for the witnesses used in this study. Completeness is important for the reconstruction of the textual history, because the computer depends on minimal difference between witnesses to determine quantitative affinity. Consequently, the computer reconstructed the genealogical history on the basis of witnesses having at least 80% of their text complete; the more fragmentary witnesses are added to the genealogical tree where they best fit after the tree is constructed. The fragmentary witnesses are still important and should not be excluded from the study because they contribute to establishing fixed dates in the textual history.

**Table 2.1:**  
**Distribution of Extant**  
**Witnesses by Century:**

| Century | Number of Witnesses |
|---------|---------------------|
| 1       | 0                   |
| 2       | 3                   |
| 3       | 33                  |
| 4       | 17                  |
| 5       | 28                  |
| 6       | 23                  |
| 7       | 17                  |
| 8       | 9                   |
| 9       | 21                  |
| 10      | 18                  |
| 11      | 11                  |
| 12      | 17                  |
| 13      | 5                   |
| 14      | 6                   |
| 15      | 1                   |
| 16      | 3                   |
| 17      | 0                   |
| 18      | 0                   |
| 19      | 2                   |
| 20      | 2                   |
| 21      | 1                   |

Because many of the witnesses are fragmentary, it is of interest to know the distribution of those witnesses having 80% or greater completeness. They are the ones that contribute to the reconstruction of the genealogical history. Table 2.3 and its associated graph display the distribution of these witnesses. It is evident that numerous contributing witnesses are from as early as the third century, so a reasonably good reconstruction can be expected.

**Table 2.2**  
**Distribution of Witnesses**  
**by Completeness:**

| % Complete | Number of Witnesses |
|------------|---------------------|
| 0-5        | 69                  |
| 6-10       | 6                   |
| 11-15      | 1                   |
| 16-20      | 1                   |
| 21-25      | 0                   |
| 26-30      | 0                   |
| 31-35      | 0                   |
| 36-40      | 1                   |
| 41-45      | 6                   |
| 46-50      | 2                   |
| 51-55      | 0                   |
| 56-60      | 13                  |
| 61-65      | 9                   |
| 66-70      | 6                   |
| 71-75      | 4                   |
| 76-80      | 6                   |
| 81-85      | 12                  |
| 86-90      | 7                   |
| 91-95      | 6                   |
| 96-100     | 68                  |

### *Limited Diversity*

The more diverse the text the more difficult the reconstruction of its textual history is. In the overall picture, all witnesses to John agree in over 90% of the text. The places of variation and the number of variants at those sites provide the data for reconstruction. However, even so, the number of places of variation and the number of variants constitute a limit to what can be reconstructed because of the magnitude and complexity of the problem.

**Table 2.3**  
**Distribution of Witnesses of**  
**80% or Greater Completeness**  
**by Century**

| Century | Num. of Witnesses |
|---------|-------------------|
| 1       | 0                 |
| 2       | 0                 |
| 3       | 2                 |
| 4       | 4                 |
| 5       | 7                 |
| 6       | 3                 |
| 7       | 6                 |
| 8       | 4                 |
| 9       | 17                |
| 10      | 12                |
| 11      | 8                 |
| 12      | 15                |
| 13      | 4                 |
| 14      | 5                 |
| 15      | 1                 |
| 16      | 1                 |
| 17      | 0                 |
| 18      | 0                 |
| 19      | 0                 |

But modern technology has expanded that limit to where reconstruction is now possible for texts the size and diversity of John. The NA-27 apparatus records 1,538 places of variation<sup>6</sup> for the Gospel of John with a total of 3,725 variant readings distributed among them.<sup>7</sup> This averages out to 2.42 variants per place of variation. In earlier decades, this amount of information would have been impossible to manually process, but not so today; my desktop computer provides

<sup>6</sup> Of course, there are more places of variation than this, but the editors of the NA-27 text have weeded out those that are insignificant for reconstruction and meaning.

<sup>7</sup> Appendix B provides a map showing where the places of variation occur in the text by chapter and verse.

complete solutions to problems this size in just a matter of minutes. Table 2.4 and its associated graph display the distribution of the number of variations per place of variation. For example, 1,066 places of variation have only two variations whereas only one place of variation has eight variations.

**Table 2.4**  
**Distribution of Number of Variations**  
**per Place of Variation**

The NA-27 apparatus records seven different types of variations to the text. Table 2.5 displays the distribution of these types of variation for the Gospel of John. While the type of variation has no significance for the reconstruction process, the information is provided for those who are interested.

**Table 2.5**  
**Distribution of Variation Type**

|                      |       |
|----------------------|-------|
| Omit a word          | 467   |
| Omit a phrase        | 186   |
| Alternate word       | 1,184 |
| Alternate words      | 1,007 |
| Transposed words     | 211   |
| Added word or phrase | 670   |
| Other                | 0     |
| Total =              | 3,725 |

### ***Commonness of Text***

*Commonness* is a measure of the percentage of text two witnesses have in common. When two witnesses both have complete texts, that is, they are not fragmentary, having readings at every place of variation, they have 100% commonness, regardless of the agreement or disagreement of their readings. Fragmentary witnesses, however, are less than complete and may actually have no commonness of text. For example, witness A may be 40% complete, lacking the text for the last 60% of the places of variation, and witness B may be 40% complete, lacking the text for the first 60% of the places of variation; as a result, the two witnesses have no commonness of text. The greater the commonness of text two witnesses have the greater potential they have for genealogical affinity. Table 2.6 and its associated graph display the distribution of commonness each witness shares with every other witness for the Gospel of John.

**Table 2.6**  
**Distribution of Commonness of**  
**Text among Witnesses**

### ***Quantitative Affinity***

Quantitative affinity<sup>8</sup> is a measure of how strongly two witnesses are genealogically related. Witnesses are genealogically related when they have many of the same readings at their shared places of variation. Quantitative affinity is determined by the number of places of variation where the witnesses have the same reading divided by the number of places of variation the witnesses have in common. For example, if witness A and witness B have 1,000 places of variation in common, and in 952 places they have the same reading, the quantitative affinity of A to B is  $952 \div 1,000 = 0.952$  or 95.2%. Table 2.7 and its associated graph display the distribution of quantitative affinity among all the pairs of witnesses for the Gospel of John.

**Table 2.7**  
**Distribution of Quantitative Affinity**  
**Among all Witnesses**

<sup>8</sup> Quantitative affinity is supplemented by the sibling gene to affirm sibling relationship.

It is evident that many of the extant witnesses to John have relatively strong quantitative affinity with one another. These data are skewed because of the many fragmentary witnesses. A better picture of the significant affinity is that which is among witnesses having 80% content or greater. These witnesses are the ones used to reconstruct the genealogical history. Table 2.8 and its associated graph display the distribution of quantitative affinity among witnesses having 80% content or greater. This suggests that reconstruction of the genealogical history is reasonably feasible.

**Table 2.8**  
**Distribution of**  
**Quantitative Affinity**  
**Among Witnesses with**  
**80% or Greater Content**

| %<br>Affinity | Number<br>of<br>Witnesses |
|---------------|---------------------------|
| 0-5           | 0                         |
| 6--10         | 0                         |
| 11--15        | 0                         |
| 16-20         | 0                         |
| 21-25         | 0                         |
| 26-30         | 0                         |
| 31-35         | 0                         |
| 36-40         | 0                         |
| 41-45         | 37                        |
| 46-50         | 195                       |
| 51-55         | 431                       |
| 56-60         | 331                       |
| 61-65         | 385                       |
| 66-70         | 451                       |
| 71-75         | 304                       |
| 76-80         | 351                       |
| 81-85         | 212                       |
| 86-90         | 486                       |
| 91-95         | 337                       |
| 96-100        | 396                       |

### ***Genealogical Affinity***

Genealogical affinity among witnesses occurs when they share a common sibling gene. The sibling gene of a witness consists of the variants initiated in its parent exemplar. This information is derived from the database as the variants two witnesses share that occur a minimum number of times in the database.

### ***Conclusion***

There are sufficient witnesses to the text of the Gospel of John with dates distributed over the historical period of interest, being sufficiently complete, having relatively limited diversity, and having ample mutual commonness and strong genealogical affinity. There is good reason to expect that the genealogical history derived from these witnesses will be a good approximation of the actual textual history of the book.

## CHAPTER 3

### GENEALOGICAL HISTORY OF JOHN'S MANUSCRIPTS

This chapter presents the genealogical history of the manuscripts<sup>1</sup> of the Greek text of the Gospel of John as reconstructed by computer program Lachmann-10.<sup>2</sup> Beginning with a data base of 218 existing witnesses, 1,538 places of variation, and 3,725 variants, the program reconstructed 50 intermediate exemplars, arranging them in the genealogical stemma (tree diagram) presented in its full form in Appendix C, but in a condensed form in Figure 3.1.<sup>3</sup> This condensed form portrays the genealogical interrelationship of all the reconstructed exemplars of the text of John including most of the terminal witnesses. The rectangular boxes contain the information for the exemplars created by the software and the boxes with rounded corners contain the information for the extant witnesses. Witnesses in the same box are siblings. Figure 3.2 displays a second tree diagram in which only the exemplars are shown with only one principal extant witness. All the technical data and diagrams contained in this chapter were derived from the monitor screen of Lachmann-10 or the report it created.

The head exemplars of the three main branches of the stemma are exemplars Ex-262#, Ex-263#, and Ex-267#. These branches are quite independent of one another, having mutual affinities ranging from 73% to 83%.<sup>4</sup> But they have affinities with the autograph ranging from 82% to 92%. In addition, the sibling gene of each uniquely distinguishes them from one another.

---

<sup>1</sup> The term *manuscript* is used here in its inclusive sense of manuscripts, translations, church fathers, and reconstructed exemplars—the sense I usually assign to the term *witness*.

<sup>2</sup> The total computing time was one minute and forty-three seconds including the time required for the software to assemble and format all the information contained in the tables, diagrams, and appendices of this book.

<sup>3</sup> The full diagram, displayed in Appendix C, requires six pages. The condensed form deletes all the terminal branches (extant witnesses) except one at each exemplar—the most interesting one. Likewise it omits exemplars that only account for same-generation mixture (those with a \$ sign attached to their name).

<sup>4</sup> Ex-262 to Ex-263 (0.83); Ex-262 to Ex-267 (0.73); Ex-263 to Ex-267 (0.77).

**Figure 3.1**  
**Condensed Genealogical Stemma-1 of John**

### *Readings of the Autographic Text*

The theory expressed in the first volume of this series<sup>5</sup> indicates that the readings of the autographic text should be determined on the basis of the “consensus among ancient independent witnesses.” The solution for John ended up with three independent recensions which were candidates for being witnesses to the text of the autograph. The guideline given in the theory recommended selecting the three most ancient recensions for use in determining the consensus; for John they are: Ex-262#, Ex-263#, and Ex-267#. The text of the autograph is presented in Appendix D.

<sup>5</sup> Chapter Two of *The Genealogical History of the Greek Text of the Gospel of Matthew*.

**Figure 3.1a**  
**The Egyptian Recension**

### *The Western Text Tradition*

Figure 3.3 displays the first generation with the expansion of the branch of the Western recension Ex-267#. Witnesses in boxes with square corners are reconstructed exemplars; those in boxes with rounded corners are terminal branches—that is, they contain extant witnesses. This text tradition is supported by most of the Old Latin translations, and by many church fathers. The expansions of the two other recensions (Exemplars Ex-262# and Ex-263#) are displayed in Figures 3.4 and 3.5 respectively.

The format of the information on each line is as follows: (1) the name of the witness; (2) the genealogical affinity of the witness with its primary parent exemplar, enclosed in square brackets []; (3) generation from the autograph, enclosed in angular brackets <>; (4) date, enclosed in curly brackets {}; (5) the number of variants the witness differs from its primary parent, enclosed in solidus //; (6) The number of variants in the sibling gene; and (7) the number of parents the witness has.

**Figure 3.1b**  
**The Antiochan Recension**

**Figure 3.1c**  
**The Antiochan Recension**

Exemplar Ex-267# was a first-century recension (c. AD 80); it was the ancestral text from which most of the Old Latin translations were derived. I refer to this branch as the Western text tradition. It has a depth of six generations, although it has extant witnesses as recent as AD 750 (it-aur^c). This recension has an affinity with the autograph of only 82%, differing from the autograph by 241 variants, and having 3 parents.<sup>6</sup> It has 241 variants in its sibling gene, most of which are persistent throughout the witnesses in the branch. Although lacking 80% completeness,

<sup>6</sup> Besides the autograph, the parents in this case and that of the other independent recensions are only secondary sources of same-generation mixture from virtual exemplars dating between the autograph and that of assumed first-generation.

nearly all the Old Latin translations are in this branch along with many Latin church fathers. Its date is based on that of fifth-generation Papyrus P<sup>Δ</sup>22 (c AD 250)

**Figure 3.2**  
**Condensed Tree Diagram of John**

**Figure 3.3**  
**Expanded First Generation**  
**With the Western Text Tradition**

### ***The Egyptian Text Tradition***

Figure 3.4 displays the branch of the Egyptian text tradition. Exemplar Ex-262# was a first century recension (c. AD 84); it was the ancestral text from which the Egyptian witnesses were derived. It has an affinity with the autograph of 92%, differing from the autograph by 128 variants, and having 2 parents. It has 128 variants in its sibling gene, most of which are persistent throughout the witnesses in the branch. I refer to this branch as the Egyptian text tradition. It is the exemplar for the Akhmimic, Boharic, and Sahidic versions, and a number of uncial fragments. It is the exemplar from which fragments P<sup>5</sup>%, P<sup>36</sup>, P<sup>55</sup>, P<sup>59</sup> P<sup>84</sup>, P<sup>106</sup>, 0127%, and others were most likely derived. It has two second-generation recensions: Ex-257 (c. AD 150) and Ex-261 (c. AD 104). The branch has a depth of seven generations and witnesses as recent as c. AD 1302 (MS 1093%). Its date is established by fifth-generation church father Origen (Or<sup>a</sup>% AD 254).

Second-generation exemplar Ex-257 (c. AD 150) is the source of Papyri P<sup>66</sup>\* and its correctors, as well as P<sup>28</sup>%, P<sup>108</sup>% and others. Second-generation exemplar Ex-261 (c. AD 104) is the most likely source fragmentary Papyrus P<sup>6</sup>%,P<sup>44</sup>%,P<sup>60</sup>%,P<sup>75</sup>%, P<sup>95</sup>% and others. It is also the source of third-generation exemplars Ex-253 and Ex-258.

Third-generation exemplar Ex-258 is the source of Codex Vaticanus (B\*) and its correctors. Third-generation exemplar Ex-253 (c. AD 250) is the source of MSS W<sup>c</sup>% and 070%. It is also the source of fourth-generation exemplars Ex-239 and Ex-244. .

Fourth-generation exemplar Ex-239 (c. AD 300) is the source of Codex Sinaiticus (01\*) and its correctors, Fourth-generation exemplar Ex-244 (c. AD 450) is the source of MS L019\* and its corrector, and is the most likely text from which fragmentary MS 0109% was derived. It also is the source of fifth-generation exemplar Ex 243 (c. 500) which is the source of MS 33\* and its corrector. It is also the source of sixth generation exemplar Ex-225 (c. AD 950) which is the source of MS 044\* and its corrector.

### ***The Antiochan Text Tradition***

Figure 3.5 displays the branch of the Antiochan text tradition. Exemplar Ex-263# was a first century recension (c. AD 60); it was the ancestral recension from which Antiochan witnesses were derived, including the subsequent Byzantine recensions; it has an affinity with the autograph of 91%, differing from the autograph by 138 variants, and having 3 parents. It has 138 variants in its sibling gene, most of which are persistent throughout the witnesses in the branch.

**Figure 3.4**  
**The Egyptian Text Tradition**

**Figure 3.5**  
**The Antiochan Text Tradition**

I refer to this branch as the Antiochan text tradition because most of the Syriac translations are found in relatively early branches. It has thirteen generations and is supported by the most recent witnesses as well as by numerous early witnesses. It is the source of two second-generation exemplars, Ex-219 and Ex-256; and it is the most likely source of fragmentary papyri P<sup>63</sup>% and P<sup>76</sup>%, as well as MSS 086%, 0217%, 0234%, and Syriac translations sy<sup>c</sup>% and sy<sup>s</sup>%, and Boharic translation bo<sup>a</sup>%. Its date is established by the seventh-generation papyrus P<sup>90</sup>% (c. AD 150).

Second-generation exemplar Ex-219 (c. AD 353) is the source of MS D05\* and its correctors, and the most likely text used by fragmentary church father Epiphanius of Constantia (AD 403). Second-generation exemplar Ex-256 (c. AD 65) is the most likely text from which

fragmentary MSS A\*, A<sup>c</sup>, and 078\*, together with Syriac translation sy<sup>p</sup> were derived. It is the source of third-generation exemplar Ex-252.

Third-generation exemplar Ex-252 (c. AD 70) is the most likely text from which fragmentary MSS N\*, 0101, 0145, and Syriac translation sy<sup>h</sup> were derived. It is the source of fourth-generation exemplars Ex-246 and Ex-250. Fourth-generation exemplar Ex-246 (c. AD 150) is head of a sub-branch containing witnesses related to the early stages of the proto-Byzantine text.

Figure 3.5a displays the genealogical history of the descendants of fourth-generation exemplar Ex-250 (c. AD 75) which may be regarded as the text of the proto-Byzantine tradition. It is the most likely source for numerous fragmentary Byzantine-like manuscripts. Unexpectedly, it is the most likely text from which Scrivener's *Textus Receptus* (TR) was derived; that text is usually found in the latest generation of the Byzantine text tradition.

According to Bruce M. Metzger, the witnesses to the Caesarean text tradition are Θ (038), W, 28, 565, 700, P<sup>45</sup>, fam.1, and fam. 13.7 In the text of the Gospel of Mark, these witnesses are all found clustered in the early generation descendants of the Antiochan text tradition, but in the text of the Gospel of John, these witnesses are mostly scattered in the Antiochan text tradition.

### ***The Generations of Genealogical History***

Program Lachmann-10 reconstructed the genealogical history of the text of John in thirteen generations of descent from the autograph. Of course, the exact number of generations cannot be known because the genealogical history before the alleged first-generation major recensions was too fuzzy for the software to accurately reconstruct. The extant witnesses are distributed throughout every generation of the genealogical history. Table 3.1 and its associated graph display the distribution of the extant witnesses of John by generation.

| 5          | 30                |
| 6          | 33                |
| 7          | 24                |
| 8          | 11                |
| 9          | 3                 |
| 10         | 1                 |
| 11         | 1                 |
| 12         | 1                 |
| 13         | 2                 |

### *Mixture*

The number of parents a witness had is a measure of the mixture of its text; the more parents, the more mixture. At any place of variation, the reading of a witness may differ from that of its primary parent exemplar<sup>8</sup> for one of two reasons: (1) the reading is a newly initiated variant having no prior existence; or (2) the scribe selected the reading from one of the secondary exemplars he was consulting. Witnesses having only one parent experienced no mixture; every variant differing from that of the primary parent exemplar was newly initiated by the scribe either accidentally or intentionally. Table 3.2 displays the distribution of witnesses by number of parents. Those witnesses with the greatest mixture are those with the most diverse text; for example: 70 of the witnesses had only one parent, having no mixture at all; Exemplar Ex-225, the source of MS 044\* and its corrector 044^c, has 25 parents, indicating the extreme mixture of that text; and MS 1241 had 23 parents, also indicating extreme mixture. The sources of mixture are not displayed in the tree diagrams.

<sup>8</sup> A primary parent exemplar is the exemplar from which a witness derives its genealogical descent; secondary parent exemplars are the sources from which a witness acquires mixture. A witness has only one primary parent, but it may have any number of secondary parent exemplars.

**Table 3.2**  
**Distribution of Witnesses**  
**by Number of Parents**

| Num. of Parents | Num. of Witnesses |
|-----------------|-------------------|
| 1               | 70                |
| 2               | 46                |
| 3               | 23                |
| 4               | 17                |
| 5               | 22                |
| 6               | 11                |
| 7               | 14                |
| 8               | 8                 |
| 9               | 10                |
| 10              | 6                 |
| 11              | 10                |
| 12              | 8                 |

| 24              | 0                 |
| 25              | 1                 |

### Primary Daughters

When an exemplar is the primary parent of one of its daughter manuscripts, then that daughter in turn is a primary descendant of the exemplar. Except for exemplars created to account for same-generation mixture (those marked with \$), an exemplar has at least two primary

descendants, but it may have as many as needed for grouping multiple sibling daughters. The number of primary daughters of an exemplar is a measure of how well the software was able to find groups of sibling sisters. Table 3.3 displays the distribution of primary daughters by number of exemplars. Ex-260 has seven primary daughters; Ex-221 has nine; and Ex-236 has 17.

Critics of the genealogical theory protest that the genealogical trees it develops are almost exclusively binary, that is, nodes in the tree have only two branches—in other words, reconstructed exemplars have only two primary daughter descendants. Table 3.3 demonstrates the error of this claim. Exemplars with no primary descendants are those created to account for same-generation mixture; they rightly have no primary descendants.

| Table 3.3<br>Distribution of Exemplars by Number of Primary Daughters |                   |
|-----------------------------------------------------------------------|-------------------|
| Num. of Primary Daughters                                             | Num. of Exemplars |
| 2                                                                     | 36                |
| 3                                                                     | 9                 |
| 4                                                                     | 2                 |
| 5                                                                     | 1                 |
| 9                                                                     | 1                 |
| 17                                                                    | 1                 |
| Total                                                                 | 110               |

| 3                                                                       | 2                 | 27                          | 1                 |
| 4                                                                       | 2                 | 32                          | 1                 |
| 5                                                                       | 4                 | 33                          | 1                 |
| 7                                                                       | 2                 | 34                          | 1                 |
| 9                                                                       | 1                 | 37                          | 2                 |
| 10                                                                      | 3                 | 46                          | 1                 |
| 11                                                                      | 2                 | 55                          | 1                 |
| 12                                                                      | 1                 | 57                          | 1                 |
| 13                                                                      | 1                 | 58                          | 1                 |
| 14                                                                      | 1                 | 59                          | 1                 |
| 15                                                                      | 1                 | 68                          | 1                 |
| 16                                                                      | 1                 | 84                          | 1                 |
| 18                                                                      | 1                 | Total=                      | 903               |

## Secondary Daughters

When an exemplar is the source of mixture (a secondary parent) for one of its daughter descendants, then that daughter is a secondary descendant of the exemplar. An exemplar does not need to have any secondary descendants, but it may have as many as needed for resolving mixture within its associated branch. The number of secondary descendants of an exemplar is a measure of its value as a source of mixture, suggesting that scribes regarded the exemplar as having some measure of authority. Table 3.4 displays the distribution of secondary daughters by number of exemplars.

## Resolution of Mixture

The optimizing procedures of the software resolve all mixture in a genealogical tree, leaving every instance of a variant accounted for either by genealogical descent, by mixture, or by initiation. That is, the software locates the exemplar where every variant originated in the genealogical history of the witnesses.<sup>9</sup> This feature is treated further in Chapter Four where the genealogical history of the variants is discussed.

### *Distribution of Affinity*

Another measure of the success of the software in reconstructing the genealogical history of the text of John is the distribution of the affinity of the witnesses to their primary parent exemplars. If this affinity is consistently high, the success may be regarded as high. Table 3.5 and its associated graph display the distribution of the affinity of the extant witnesses<sup>10</sup> to their corresponding primary parent exemplar. Table 3.6 and its associated graph display the distribution of the affinity of the reconstructed exemplars to their corresponding primary parent exemplar, not including those functioning only to resolve same-generation mixture.<sup>11</sup>

The evidence from Table 3.5 indicates that all but seven extant witnesses had a strong affinity (> 90%) with their primary parent exemplar, and all had an affinity greater than 85%. This demonstrates that considerable close grouping exists among the extant witnesses.

---

<sup>9</sup> While this is true for the book of John, for some of the other books the software may fail to uniquely identify the place of origin for a small percentage of variants.

<sup>10</sup> Witnesses with less than 80% content are excluded because they do not contribute to the reconstruction of the genealogical history but are attached at the most appropriate place after the tree is complete.

<sup>11</sup> Such exemplars do not contribute to the reconstruction of the tree diagram of the genealogical history of the witnesses, their affinity with their parent exemplar having no significance to the reconstruction process.

**Table 3.5**  
**Distribution of Affinity of Extant**  
**Witnesses with Primary Parent**

| % Affinity | No. of Witnesses |
|------------|------------------|
| 0-5        | 0                |
| 6-10       | 0                |
| 11-15      | 0                |
| 16-20      | 0                |
| 21-25      | 0                |
| 26-30      | 0                |
| 31-35      | 0                |
| 36-40      | 0                |
| 41-45      | 0                |
| 46-50      | 0                |
| 51-55      | 0                |
| 56-60      | 0                |
| 61-65      | 0                |
| 66-70      | 0                |
| 71-75      | 0                |
| 76-80      | 0                |
| 81-85      | 0                |
| 86-90      | 7                |
| 91-95      | 3                |
| 96-100     | 79               |
| Total      | 89               |

The evidence from Table 3.6 indicates that 36 (73%) of the 49 reconstructed exemplars<sup>12</sup> have a strong affinity (> 90%) with their primary parent exemplar, and another 6 (12%) had a moderate affinity (81-90%) with their parent; another 7 (14%) have a weak affinity (66-80%). The presence of weak affinities is troubling because it questions the reality of any actual genealogical relationships. But the corresponding presence of sizeable sibling genes confirms that the given witness has a common ancestry with its alleged sisters, even though the relationship may be one of distant cousins; whatever the actual relationship may have been, within the collection of witnesses the relationship is closest possible.

<sup>12</sup> The exemplars constructed just to account for same-generation mixture were not included in the study because they do not contribute to the construction of the genealogical tree.

**Table 3.6**  
**Distribution of Affinity of**  
**Exemplars with Primary Parent**

### *Global Inheritance Persistence*

Another measure of the success of the software in reconstructing the genealogical history of the text of John is the persistence of the variants once they are initiated in the stemma of genealogical history. Ideally, once a variant is initiated, it will persist in all the descendants of the exemplar in which it was initiated. Table 3.7 presents the global statistics for inheritance persistence for the reconstructed stemma of John. The information is the accumulated sum of every witness' hereditary persistence. For each witness, the total number of variants it could inherit from all its ancestors was counted, also the number of those inheritable variants it actually inherited.<sup>13</sup>

<sup>13</sup> The hereditary persistence of a witness is the ratio of the number of inheritable variants to the number of actually inherited ones. The number of inheritable variants of a witness is the sum of the number of new variants initiated in all of its ancestor exemplars.

**Table 3.7**  
**Global Inheritance Persistence**

|                                                             |        |
|-------------------------------------------------------------|--------|
| Global Total Number of Inheritable Variants: <sup>14</sup>  | 83,242 |
| Global Number of Actually Inherited Variants: <sup>15</sup> | 70,873 |
| Global Number of Changed Variants: <sup>16</sup>            | 3,442  |
| Global Number of Corrected Variants: <sup>17</sup>          | 8,927  |

This information indicates that for the 83,242 variants (the inheritable ones) initiated in all the ancestor exemplars in the stemma, 70,873 were persistent, being actually inherited by all their respective descendants (85.14%), and 3,442 were changed (4.13%) somewhere in intervening ancestors. Interestingly, 8,927 of them (10.72%) were changed and corrected back to the reading of the exemplar in which the variant originated. This information indicates the solution may be regarded as reasonably successful. The persistence of variant readings may be observed in the trees tracing the genealogical history of specific variants found in Chapter four.

### ***Date of the Autograph***

The dates of the autograph and all other reconstructed exemplars are relative, not exact, being created by the date algorithm of the software which states that a parent exemplar is 50 years older than that of its oldest sibling daughter. When the dates diminish to below AD 150, the generation gap is reduced to 20 years, giving more room for activity in the first half of the second century and earlier. When the dates diminish below AD 100, the generation gap is reduced to five years. When the date diminishes below AD 50, the generation gap is reduced to one year. The date of the autograph (c. AD 55) is traced down through the Antiochan recension to the seventh-generation fragmentary Papyrus P<sup>90</sup> (c. AD 150) through the following exemplars:

---

<sup>14</sup> An inheritable variant of a witness is one of its readings that was initiated in one of its ancestral exemplars.

<sup>15</sup> An inherited variant of a witness is one of its inheritable readings that persisted unaltered from its point of initiation through its intervening ancestors to the given witness itself.

<sup>16</sup> An inheritable variant of a witness is counted as changed if it was altered in an intervening ancestral exemplar, disrupting its hereditary persistence.

<sup>17</sup> An inheritable variant of a witness is counted as corrected if after being altered it is restored again to its initial reading.

Autograph[0.00]<0>{AD 55}/0/0/0  
 |-Ex-263#[0.91]<1>{AD 60}/138/138/3  
 |-Ex-256[0.85]<2>{AD 65}/238/138/5  
 |-Ex-252[0.88]<3>{AD 70}/185/238/6  
 |-Ex-250[0.96]<4>{AD 75}/57/185/8  
 |-Ex-245[0.99]<5>{AD 80}/20/57/10  
 |-Ex-234[0.78]<6>{AD 100}/323/20/6  
 |-P<sup>90</sup>%[0.85]<7>{AD 150}/4/323/3

The witness of P<sup>90</sup>% is fragmentary, having only 26 places of variation, having 85% agreement with its parent exemplar. So the date of the autograph is not firm. But, as alternatives, the date of the autograph could be AD 75 on the basis of fifth-generation church father Origen (c. AD 254) in the Egyptian text tradition, or on the basis of fifth-generation Papyrus P<sup>22</sup> (c. AD 250) in the Western text tradition. In any case, the date seems too early based on the commonly accepted date of the book.

### ***Conclusions***

The software does indeed reconstruct a genealogical history of the manuscripts of the Gospel of John, and of the other books of the New Testament as well. However, the results are not what was anticipated, based on earlier experiments with smaller books, smaller databases, and less sophisticated programs. I anticipated that the commonly accepted text traditions would emerge as independent witnesses to the autograph. Those text traditions did emerge, but they turned out to be not exactly Western, Alexandrian, Caesarean, and Byzantine, but rather Western, Egyptian, and Antiochan, with Byzantine being the latest form of the Antiochan text tradition. Furthermore, The Egyptian witnesses did not form one uniform tradition but rather two somewhat diverse independent branches. Codex Sinaiticus (01\*) and Codex Vaticanus (B\*) emerged as relatively independent of each other and only loosely related to the other Egyptian witnesses.

This concludes the discussion of the genealogical history of the witnesses to John. While the reconstruction of the genealogical history of witnesses depends on the quantitative affinity (consensus), genetic affinity (sibling genes), and the date of the witnesses, the genealogical history of variant readings depends on the consensus and inheritance of variants. The history of the variant readings of the text of John is discussed in Chapter Four.

## CHAPTER 4

### THE HISTORY OF THE TEXTUAL VARIANTS IN JOHN

Chapter Three presents the genealogical history of the manuscripts<sup>1</sup> of the Greek text of the Gospel of John. That history is necessary before the genealogical history of an individual variant may be safely discussed, because the history of a textual variant is totally dependent upon the history of the manuscripts in which it occurs. The NA-27 Greek New Testament records 1,538 places of textual variation in the book of John and 3,725 variant readings. This averages out to a variableness index of 2.42 variants per place of variation—a relatively low value. Table 4.1 and its associated graph display the distribution of the number of variants per place of variation.

**Table 4.1**  
**Distribution of Number of**  
**Variants per Place of**  
**Variation**

---

<sup>1</sup> Again, the term *manuscript* is used in its broader sense to include manuscripts, translations, quotations from church fathers, and reconstructed exemplars.

Initially the number 1,538 seems large when considering textual variations in a book of the Bible, but this number must be considered with respect to the total number of places where variation could occur. If the number of words in the Greek text of John (c. 17,337) is regarded as the number of places where variation could occur, and each variation is regarded as the equivalent of one word, then the text of John is 90% pure<sup>2</sup> before variations are even considered. Thus variation occurs in only 10% of the text. In that small portion of the text 3,725 variants are recorded, but 1,538 of them are original readings, so only 2,187 are real variants. While this still seems like a large number, the genealogical software clearly identified all of them as non-original.

### ***Types of Variants***

Four basic types of textual variations occur in the text of John: (1) omissions, (2) alterations, (3) transpositions, and (4) additions. Table 4.2 lists the distribution of these types of variants in the 1,920 places of variation in the text of the Gospel of John, and Table 4.3 lists their distribution with respect to all variations.

**Table 4.2**  
**Distribution of Variants by Type**

| Variation type       | Number of Variants |
|----------------------|--------------------|
| Omit a word          | 233                |
| Omit a phrase        | 91                 |
| Alternate word       | 490                |
| Alternate words      | 323                |
| Transposed words     | 93                 |
| Added word or phrase | 308                |
| Total                | 1,538              |

**Table 4.3**  
**Distribution of All Variants by Type**

| Variation Type       | Number of Variants |
|----------------------|--------------------|
| Omit a word          | 467                |
| Omit a phrase        | 186                |
| Alternate word       | 1,184              |
| Alternate words      | 1,007              |
| Transposed words     | 211                |
| Added word or phrase | 670                |
| Total                | 3,725              |

---

<sup>2</sup>  $((17,337 - 1,538) \div 17,337) \times 100 = 90.08$ .

### ***Determining Exemplar Readings***

Whenever the genealogical software creates a new exemplar as the parent of a group of sibling sister witnesses, at each place of variation, the reading of the exemplar is decided on the basis of four ordered rules:

- (1) Majority consensus among all the immediate sibling children;
- (2) if no majority, then postpone the decision until a sibling emerges for the exemplar currently being reconstructed, that sibling will have the inherited reading;<sup>3</sup>
- (3) if, in the case of deciding the readings of the autograph, majority consensus fails, then accept the first variant (the NA-27 reading) if it is an option;
- (4) if the first variant is not an option, then by default arbitrarily select the smallest variant number that is an option;<sup>4</sup>
- (5) if witnesses are of different languages, then select the Greek reading.

Table 4.4 lists the number of times each of the above rules was used in the process of constructing the genealogical history of the text of John.

**Table 4.4**  
**Frequency of Exemplar Reading Rules**

|                             |        |
|-----------------------------|--------|
| (1) by greatest probability | 70,371 |
| (2) by deferred ambiguity   | 3,080  |
| (4) by default to NA-27     | 522    |
| (5) by arbitrary choice     | 42     |
| (6) by language deference   | 228    |
| Total                       | 74,243 |

---

<sup>3</sup> I call this practice *deferred ambiguity*. Since sibling witnesses rarely have scribal errors at the same place of variation, where the reading of one sibling is ambiguous—that is, it is uncertain which of two readings is the inherited reading and which is a newly initiated error—the other siblings will have the inherited reading. Of the 74,243 decisions the software made, only 55 had more than two alternatives.

<sup>4</sup> Next to the first variant—the NA-27 choice—the reading with the smaller variant number is usually supported by more witnesses than those with larger variant numbers. While this option is purely arbitrary, it turns out to be rarely significant for determining the readings of the autograph. For determining the readings of the autograph the algorithm treats the exemplars of the last three branches to be constructed as siblings constituting the ancient independent witnesses.

The evidence indicates that the vast majority of exemplar readings (94.78%) were determined by “consensus among independent witnesses,” and nearly all the remainder (4.15%) were determined by deferred ambiguity, while only 0.73% were deferred to the NA-27 reading, and 0.34% were determined by arbitrary choice or language preference.

### ***Autographic Readings***

The readings of the autographic text of John were determined on the basis of consensus among the three most ancient independent witnesses. For the book of John, the exemplars of the three most ancient independent recensions were used: (1) Exemplar Ex-267#, the Western text tradition; (2) Exemplar Ex-263#, the Antiochan text tradition; and (3) Exemplar Ex-262#, the Egyptian text tradition. Appendix D lists each of the 1,538 readings of the autograph together with its place of variation, the chapter and verse where it occurs, the reading of the text at that place, and the probability that the reading is original. Those readings lacking consensus were determined by default to the decision of the NA-27 editors’ evaluation of internal evidence if that reading was among the available alternatives; otherwise, the next lowest variant number was selected by arbitrary choice. Table 4.5 lists the number of times each of the above rules was used in the process of determining the autographic readings of the text of John. The evidence indicates that 84.40% of the readings were determined by “consensus among ancient independent witnesses”; only 0.78% were determined by default to the NA-27 reading; and 14.82% were determined by arbitrary choice and none by language deference.

**Table 4.5**  
**Frequency of Exemplar Reading Rules**

|                                                                |       |        |
|----------------------------------------------------------------|-------|--------|
| Number of Autographic variants decided by greatest probability | 1,298 | 84.40% |
| Number of Autographic variants decided by Choice of NA27       | 12    | 0.78%  |
| Number of Autographic variants decided by arbitrary choice     | 228   | 14.82% |
| Number of Autographic variants decided by Language deference   | 0     | 0.00%  |
| Total                                                          | 1,538 |        |

Table 4.6 and its associated graph displays the distribution of the probability of the reconstructed autographic readings. Of the 1,538 readings, 1,043 had a probability of 1.0 (100%), 410 had a probability of 0.66 (66%), 73 had a probability of 0.5 (50%) and 12 had a probability of 0.33 (33%).

**Table 4.6**  
**Distribution of Autographic**  
**Readings by Probability**

### ***Agreement with NA-27***

In the database used in this work, the first variant at any place of variation is the reading of the NA-27 text. The second and subsequent variants are the alternate readings listed in the NA-27 database. Table 4.7 lists how often the various alternate readings were found to be original. The evidence indicates that the autographic text reconstructed by the genealogical software agrees with the text of NA-27 1,504 times or 78.33% of the time, and differs from the NA-27 text 416 times or 21.67% of the time. Appendix E lists the 277 places where the Lachmann-10 text differs from that of NA-27.

**Table 4.7**  
**Frequency of Variants**

|           |       |
|-----------|-------|
| Variant 1 | 1,293 |
| Variant 2 | 170   |
| Variant 3 | 38    |
| Variant 4 | 28    |
| Variant 5 | 8     |
| Variant 6 | 1     |
| Total     | 1,538 |

### *The Origin of the Variants*

The software identifies the place of origin of every variant in the genealogical tree, accounting for every instance of a variant as being the result of genealogical descent, mixture, or initiation—that is, the software finds the one and only exemplar or extant witness in the genealogical history where each variant originated.<sup>5</sup> Often, after the first initiation of a reading, it may have been introduced again in a later exemplar by means of mixture.

Exemplars Ex-269\$ through Ex-275\$, are children of the Autograph created by the software as sources for resolving same-generation mixture between the branches headed by the first-generation recensions, that is, for non-autographic readings that occur in more than one primary branch of the genealogical tree. These exemplars serve as virtual exemplars lost in the unrecoverable genealogical history between the Autograph and the assumed first-generation recensions. Of the 2,187 non-autographic variants, 1,624 are listed as originating in one of these virtual exemplars. Two possibilities exist for each of these variants: either it really originated only once in the earliest decades of unrecoverable history, or it originated independently in two or more major branches of the tree diagram of genealogical history; the latter case can be true for commonly occurring scribal errors, but not for the uncommon ones. Variants of the first kind are weakly distributed among the branches of the first-generation recensions and are of little genealogical significance individually; their distribution among the three most ancient recensions is weaker than that of their corresponding autographic reading.

### **Egyptian Recension**

First generation exemplar Ex-262# was the ancestral forefather of the Egyptian text tradition. This recension differs from the autograph by 128 secondary variants<sup>6</sup> among which it uniquely originated the following 75 variants peculiar to this entire text tradition:

---

<sup>5</sup> The place a variant reading was initially introduced in genealogical history is determined by locating the witness containing the variant reading where the reading differs from that of its parent exemplar and the reading is not accounted for by mixture. Mixture fails when the reading does not occur in any witness in preceding generations.

<sup>6</sup> In this and other lists of variants herein, an exemplar enclosed in square brackets [] is the source of mixture for the associated variant. Variants are listed only by their reference: 1:16,1.1[Ex-274\$]; 1:21,2.1; 1:26,3.1; 1:27,1.1[Ex-274\$]; 1:27,2.1[Ex-274\$]; 1:37,2.1; 1:39,1.1[Ex-274\$]; 1:42,1.1[Ex-274\$]; 2:10,2.1[Ex-274\$]; 3:4,1.2; 3:13,1.1; 3:16,1.1; 3:17,1.1; 4:1,1.2[Ex-274\$]; 4:16,1.1[Ex-274\$]; 4:17,1.1[Ex-274\$]; 4:36,2.1; 4:51,2.1[Ex-274\$]; 4:52,2.1[Ex-274\$]; 4:54,1.1[Ex-274\$]; 5:2,2.3; 5:3,2.1[Ex-274\$]; 5:11,1.1[Ex-274\$]; 5:12,3.1; 5:26,2.1[Ex-274\$]; 5:29,1.2; 5:44,1.2; 5:47,1.3; 6:17,3.1; 6:24,3.1[Ex-274\$]; 6:47,1.1; 6:53,1.2; 6:55,1.1[Ex-274\$]; 6:55,3.1[Ex-274\$]; 6:58,3.1; 6:68,1.1; 6:71,2.1; 7:3,4.1; 7:8,1.2[Ex-274\$]; 7:10,1.1; 7:20,1.1; 7:46,1.1; 7:50,2.1; 7:52,2.1[Ex-274\$]; 8:23,2.1; 8:28,1.2; 8:28,2.3; 8:34,2.2; 8:38,1.1; 8:38,2.1; 8:38,5.1; 8:42,2.2; 8:55,1.3[Ex-274\$]; 9:6,2.1; 9:11,1.1;

## Western Recension

First-generation exemplar Ex-267# was the Western recension, being the text from which most of the Old Latin translations were made. It differs from the autographic text by 241 secondary variants,<sup>7</sup> among which it uniquely originated the following 136 variants peculiar to this entire text tradition:

---

## Antiochan Recension

Exemplar Ex-263# was the Antiochan recension, being the text from which the Syrian and Byzantine witnesses were derived. It differs from the autographic text by 138 secondary variants,<sup>8</sup> among which it uniquely originated the following 107 variants peculiar to this entire text tradition:

<sup>8</sup> 1:18,1.3; 1:24,1.2[Ex-274\$]; 1:28,3.2; 1:30,1.2; 1:31,1.2[Ex-274\$]; 1:39,3.2; 1:42,3.2; 1:45,1.2; 1:46,2.2[Ex-274\$]; 1:49,1.3; 1:51,1.2; 2:12,2.2[Ex-274\$]; 2:13,2.3; 2:15,2.1[Ex-274\$]; 2:15,3.2; 2:17,1.2; 2:22,2.2; 2:24,1.2; 3:3,1.2[Ex-274\$]; 3:15,1.3; 3:15,2.2; 3:20,1.2[Ex-274\$]; 3:23,1.2; 3:27,1.2; 3:28,2.5; 3:34,1.2; 4:5,4.2;

### *Tracing Variant History*

For various reasons, it may be of interest to trace the history of the genealogical heritage of the alternate readings at particular places of variation. For each variant at the desired place, one may want to see where it originated in genealogical history and how it was subsequently distributed by genetic inheritance. Upon request, software program Lachmann-10 displays the genealogical history of the variants at any selected place of variation. It constructs the historical tree diagram (like the one in Appendix C) and displays on the monitor screen the generation and index number of the variant contained in each and every witness. The following section presents typical examples of possible studies of interest, using the tree diagram displayed in Figure 3.2 in chapter three. Colors are used to mark the genealogical descent of the alternate readings: green marks the genealogical descent of the autographic reading, and other colors mark that of the alternate readings there.

### *Variants of Textual Interest*

The genealogical history of some variants is more interesting than that of others because of their significance for translation. For example whole verses are missing in some witnesses (5:4 12:8, 14:14), likewise, the story of the adulterous woman (7:53-8:11) is missing in some witnesses. Also some places of variation have multiple options widely distributed among the witnesses (5:2, 6:70); the genealogical history may help to decide which option is more likely original.

### **Omit 5:4?**

The fourth verse of chapter five is lacking in some witnesses: “For an angel went down at a certain time into the pool and stirred up the water; then whoever stepped in first, after the stirring of the water, was made well of whatever disease he had.” Witnesses with variant 1 lack the verse while those with variant 2 contain it. Figure 4.1 displays the distribution of the variants throughout genealogical history. Variant 1 has the consensus of two of the three the first-generation recensions (Ex-262#, the text from which the Egyptian text tradition was derived, and Ex-263#, the text from

which the Antiochan text tradition was derived); it was selected as the autographic reading on this basis. It has the support of nearly all the witnesses in the Egyptian text tradition and the first-generation witnesses of the Antiochan text tradition.

**Figure 4.1**  
**Distribution of 5:4**

Variant 2 occurs in most of the witnesses in the Western text tradition headed by exemplar Ex-267#; it also occurs in one fourth-generation branch of the Egyptian text tradition (Ex-244),

and one sixth-generation branch (Ex-225). Significantly, variant 2 is supported by all the witnesses in the Antiochan text tradition headed by second-generation exemplar Ex-256. The reading of the head exemplar of the Antiochan text tradition (Ex-263#) was determined by deference to the reading of NA-27 because of ambiguity between variant 1 (the reading of exemplar Ex-219) and variant 2 (the reading of exemplar Ex-256). But in this case it seems to have been the wrong decision because it rests only on the reading of MS D05\* and its correctors—a witness known for its diversity. It seems ill-advised to allow the witness of one diverse manuscript to overrule the consensus of the entire remaining Antiochan tradition. It is better to regard the verse as original on the basis of the genealogical evidence.

### **Omit 12:8**

The eight verse of chapter twelve is lacking in some witnesses: “For the poor you have with you always, but Me you do not have always.” Witnesses with variant 2 lack the verse while those with variant 1 contain it. Figure 4.2 displays the distribution of the variants throughout genealogical history. Variant 1 has the consensus of all three the first-generation recensions: exemplar Ex-262#, the text from which the Egptian text tradition was derived, exemplar Ex-267#, the text from which the Western text tradition was derived, and exemplar Ex-263, the text from which the Antiochan text tradition was derived; it was selected as the autographic reading on this basis.

Variant 2, the missing verse, occurs only in four genealogically independent witnesses and their correctors: MSS D05\*, 892\*, P<sup>75</sup>\*, and Syriac translation sy<sup>s</sup>. The genealogical evidence strongly supports the verse as being original.

### **Omit 14:14**

The fourteenth verse of chapter 14 is lacking in some witnesses: “If you ask anything in My name, I will do *it*.” Witnesses with variant 2 lack the verse while those with variant 1 contain it. Figure 4.3 displays the distribution of the variants throughout genealogical history. Variant 1 has the consensus of all three the first-generation recensions: exemplar Ex-262#, the text from which the Egptian text tradition was derived, exemplar Ex-267#, the text from which the Western text tradition was derived, and exemplar Ex-263, the text from which the Antiochan text tradition was derived; it was selected as the autographic reading on this basis.

**Figure 4.2**  
**Distribution of 12:8**

Variant 2, the missing verse, occurs only in five genealogically independent witnesses and their correctors: third-generation MS 1010\*<sup>9</sup> and the fifth-generation branch headed by exemplar Ex-248 (the source of Family 1), fourth-generation Syriac translation sy<sup>s</sup>, third-generation Old

<sup>9</sup> A descendant of second-generation exemplar Ex-261, not shown on the diagram.

Latin translation it-b, and Vulgate translation vg^b. The genealogical evidence strongly supports the verse as being original.

**Figure 4.3**  
**Distribution of 14:14**

### Omit 7:53-8:11

Some witnesses lack the story of the adulterous woman in 7:53-8:11. There are three variant readings here. Variant 1 lacks the passage, variant 2 contains the passage, and variant 3 has

the passage in another place. Figure 4.4 displays the distribution of the variants throughout genealogical history. Variant 1, lacking the story, has the consensus of all three of the first-generation recension: exemplar Ex-262#, the source of the Egyptian text tradition, and exemplar Ex-263#, the source of the Antiochan text tradition, and exemplar Ex-267#, the source of the Western text tradition. The autographic reading was determined on the basis of that consensus.

**Figure 4.4**  
**Distribution of 7:53-8:11**

Variant 1, lacking the story, occurs in all the witnesses of the Egyptian text tradition (Ex-262#), and in most of the witnesses in the first three generations of the Antiochan text tradition (Ex-263#), and in one of the fourth-generation branches (Ex-246) of that tradition; it also occurs in early generations of the Western text tradition. Variant 2, having the story, occurs in the witnesses headed by second-generation exemplar Ex-266 of the Western text tradition (Ex-267#) and nearly all the witnesses in the fourth-generation branch of the Antiochan text tradition headed by exemplar Ex-250. Genealogically, it appears that the story was first initiated in the Western recension (Ex-266#) and subsequently was initiated by mixture in the fourth-generation Antiochan recension (Ex-250) from which it dominated that tradition except for fifth-generation sub-branches Ex-221 (Family 13) and Ex-248 (Family 1) which have variant 3. The genealogical evidence indicates that the story of the adulterous woman was not part of the original text of John.

## Multiple Variants at 5:2

“Now there is in Jerusalem by the Sheep *Gate* a pool, which is called in Hebrew, Bethesda, having five porches.” There are eight variant readings regarding the location of the pool:

- (1) ἐπὶ τῇ προβατικῇ κολυμβηθρᾷ ἡ ἐπιλεγόμενη: by the Sheep *Gate* a pool which is called
- (2) ἐν τῇ προβατικῇ κολυμβηθρᾷ ἡ ἐπιλεγόμενη: in the Sheep *Gate* a pool which is called
- (3) ἐπὶ τῇ προβατικῇ κολυμβηθρᾷ τῇ ἐπιλεγόμενῃ: by the Sheep *Gate* a pool which is called
- (4) προβατικὴ κολυμβηθρὰ λεγόμενον: the Sheep *Gate* a pool called
- (5) natatoria quae dicitur: pool which is called
- (6) in inferiore parte natatoria piscina quae dicitur: in a lower part of the sheep market a pool, which is called the pool of
- (7) ἐπὶ τῇ προβατικῇ κολυμβηθρᾷ ἡ ἐστὶν λεγόμενον: by the Sheep *Gate* a pool which is called
- (8) ἐπὶ τῇ προβατικῇ κολυμβηθρᾷ ἡ λεγόμενη: by the Sheep *Gate* a pool which is called

Figure 4.5 displays the distribution of these variants throughout genealogical history. Variant 1 has the consensus of two of the three first-generation recensions: exemplar Ex-262#, the head of the Egyptian text tradition, and exemplar Ex-267#, the head of the Western text tradition; so that reading was accepted as autographic—it dominated the earliest generations of both traditions.

Variant 1 occurs in most of the witnesses of the Egyptian text tradition except those headed by third-generation exemplar Ex-253. Variant 1 also occurs in most of the witnesses in the

Antiochan text tradition after it was initiated by mixture in the third-generation exemplar Ex-252. It was selected, by default, as the reading of exemplar Ex-267#, the head of the Western text tradition, because of the ambiguity between its second-generation descendants exemplar Ex-266, which has the fourth variant, and exemplar Ex-264, which has the sixth variant.

**Figure 4.5**  
**Distribution of 5:2**

Variant 3 occurs only in third-generation MS W\* in the Egptian text tradition. Variant 4 occurs in most of the witnesses in second-generation branch headed by exemplar Ex-266 of the

Western text tradition (Ex-267#), and in Codex Sinaitics (01\*). Variant 5 occurs only in third-generation Old Latin translation it-l in the Antiochan text tradition. Variant 6 occurs in a few witnesses in the Western text tradition. Variant 7 occurs only in third-generation papyrus P<sup>66</sup>\* in the Egyptian text tradition. Variant 8 occurs in the witnesses in two sixth-generation sub-branches of the Antiochan text tradition headed by exemplars Ex-234 and Ex-248; it also occurs in fourth-generation sub-branch in the Egyptian text tradition headed by exemplar Ex-243. The genealogical evidence indicates that variant 1 was autographic with uncertainty.

### Multiple Variants at 6:70

“Jesus answered them, ‘Did I not choose you, the twelve, and one of you is a devil?’”  
Regarding the first clause, this verse has the following six variants:

- (1) αὐτοῖς ο Ἰησοῦς: Jesus [answered] them
- (2) αὐτοῖς: [He answered] them
- (3) αὐτοῖς Ἰησοῦς: Jesus [answered] them
- (4) αὐτῷ ο Ἰησοῦς: Jesus [answered] him
- (5) Ἰησοῦς καὶ εἶπεν αὐτοῖς: Jesus [answered] and said to them
- (6) ο Ἰησοῦς λέγων: Jesus [answered] saying

Figure 4.6 displays the distribution of these variants throughout genealogical history. Variant 1 has the consensus of all three first-generation recensions, so was selected as the autographic reading. It is the reading of most of the witnesses in the Egyptian text tradition (Ex-262#) and of the witnesses in the early generations of the Western text tradition (Ex-267#). However, although Lachmann-10 assigned variant 1 as the reading of exemplar Ex-263#, the head of the Antiochan text tradition, that decision was made by default to the reading of NA-27 because of of ambiguity. It is quite evident that the decision was wrong in light of the subsequent history of that tradition. It is very likely that the reading should be variant 2. Regardless of that correction, however, the autographic reading would be the same because of the consensus of the two other traditions.

Variant 2 is the reading of nearly all the witnesses in the Antiochan text tradition (Ex-263#). Variant 3 occurs only in the witnesses in second-generation sub-branch of the Egyptian text tradition headed by exemplar Ex-257. Variant 4 occurs only in the witnesses in third-generation branch of the Western text tradition headed by exemplar ex-260. Variant 5 occurs only in the witnesses in third-generation sub-branch of the Egyptian text tradition headed by exemplar Ex-

239 (Codex Sinaiticus 01\*), and five randomly distributed witnesses (N<sup>^</sup>c%, it-a, it-ff2, and their correctors). Variant 6 occurs in the witnesses in second-generation sub-branch of the Antiochan text tradition headed by exemplar Ex-218, MS D05\* and its correctors. The genealogical evidence indicates that variant 1 is the autographic reading.

**Figure 4.6**  
**Distribution of 6:70**

## Ambiguity at 14:26

Whenever the editors of the NA-27 textual apparatus could not determine the underlying Greek text from which a Latin translation was made, they provided no reading for that translation at that place of variation, as though it were a lacuna. In the Lachmann-10 database lacunae are treated as variant 0, an ambiguous reading that does not contribute to determining the reading of parent exemplars. This ambiguous condition occurred whenever the alternative readings at that place of variation had no effect on translation; consequently, whenever this ambiguity occurred broadscale for the Latin translations, the Western text tradition had a lacuna—variant 0. This condition left Lachmann-10 with a consensus probability of 0.50 (50%) whenever the Egyptian and Antiochan text traditions differed.

This ambiguous probability occurred 75 times in determining the autographic readings of John; by default, Lachmann-10 selected variant 1, the reading of NA-27. Table 4.8 lists the frequency of the various kinds of ambiguities that affect Latin translations in John.

**Table 4.8**  
**Frequency of Ambiguity Types**

|                                         |    |
|-----------------------------------------|----|
| Presence or absence of definite article | 25 |
| Presence or absence of subject pronoun  | 4  |
| Alternate spelling of a word            | 33 |
| Alternate word order                    | 5  |
| Synonyms                                | 4  |
| Untranslatable particles                | 4  |
| Total                                   | 75 |

The second place of variation in John 14:26 provides a good example of such ambiguity: “But the Helper, the Holy Spirit, whom the Father will send in My name, He will teach you all things, and bring to your remembrance all things that I said to you.” In the last clause of the verse, some witnesses have the pronoun “I” and others do not. There are two variants here:

- (1) ἐγώ: I
- (2) omit

The question is: should the text contain the explicit first person singular nominative pronoun ἐγώ “I” or is it sufficient to have the pronoun inferred by the inflection of verb of the sentence? Figure 4.7 displays the distribution of these variants throughout genealogical history.

Variant 1 occurs only in the majority of the witnesses in the Egyptian text tradition headed by exemplar Ex-262#. Variant 2 occurs in all the witnesses of the Antiochan text tradition headed by exemplar Ex-263#, and in some principle witnesses in the Egyptian text tradition (Codex Sinaiticus 01\*, Papyrus P<sup>75</sup>\*, and MS 044\*, together with their correctors). The context does not seem to need emphasis on the subject pronoun, so the explicit pronoun is unnecessary. Variant 2 seems to be the better choice for the autographic reading.

**Figure 4.7**  
**Distribution of 14:26**

### *Variants of Theological Interest*

Although most textual variations have little or no practical theological significance, a number are found in theological discussions. For example, Bart D. Ehrman argued that the earliest form of the Greek New Testament was less “orthodox” than the canonical form that emerged at the end of the “proto-orthodox” debates that culminated in the dominance of the “orthodox” parties in the fourth century. He wrote:

It was within this milieu of controversy that scribes sometimes changed their scriptural texts to make them *say* what they were already known to *mean*. In the technical parlance of textual criticism—which I retain for its significant ironies—these scribes “corrupted” their texts for theological reasons.<sup>10</sup>

He is right about the ante-Nicene debates over the various heretical issues of the time and the emerging dominance of the orthodox parties, but his thesis that the doctrine of the apostles and first-century church, and the earliest form of the New Testament text were less “orthodox” is purely hypothetical. Of course, he provided what he regards as evidence. However, my own evaluation of the evidence he presented to establish his thesis indicates that the readings supported by the “consensus of ancient independent witnesses” are genuinely orthodox as normally interpreted, and that his “orthodox corruptions”—those intended to make orthodox doctrine more explicit—are found only in peripheral sources having little chance of being textually authoritative. The same may be said of any alleged “unorthodox” variants. So, I must conclude that what Ehrman really means is that the traditional canons of textual criticism are of no value for understanding the early text, that the “canonical text” of the New Testament is an “orthodox corruption,” and that the original text, if there ever was one original, is forever lost. The one thing he was sure of according to his “Socio-historical” research is that the earliest text was not “orthodox” and the current form of the text (i.e., the NA-28 text) is a corruption of the original text, being altered by orthodox scribes for theological reasons.

Ehrman has a problem, however, because, by his own admission, he does not know what the original text was. So how can he know it was corrupted? Also, evidently he does not know, or at least he rejects, the fact that each existing witness has within its variants the history of its genealogical descent from the original text, and the fact that genealogical principles reconstruct the original text back to the first century, the time of the apostles. So, the reconstructed text is a

---

<sup>10</sup> Bart D. Ehrman, *The Orthodox Corruption of Scripture* (New York: Oxford University Press, 1993), xii; italics his.

first century event, not a fourth century one, and it is theologically orthodox, not a corruption. The following is some of the evidence he presented regarding doctrine in the Gospel of John:

### John 1:18

Ehrman asserted:

I will not give an exhaustive study of all the issues surrounding the text of John 1:18; these are competently handled in the commentaries and in several recent studies. I will instead develop my reasons for thinking that the majority of manuscripts are right in ending the prologue with the words “No one has seen God at any time, but the unique Son (ὁ μονογενὴς υἱός) who is in the bosom of the Father, that one has made him known.” The variant reading of the Alexandrian tradition, which substitutes “God” for “Son,” represents an orthodox corruption of the text in which the complete deity of Christ is affirmed.<sup>11</sup>

Of the 1,538 places of variation in the Gospel of John, Lachmann-10 found 16 autographic readings with a probability of 0.33 (33%).<sup>12</sup> One example occurs in 1:18. There are four variant readings here:

- (1) μονογενὴς θεός: only begotten God
- (2) ὁ μονογενὴς θεός: the only begotten God
- (3) ὁ μονογενὴς υἱός: the only begotten Son
- (4) εἰ μὴ ὁ μονογενὴς υἱός: except the only begotten Son

Figure 4.8 displays the distribution of these variants throughout genealogical history. The head exemplars of the three first-generation recensions each have a different reading, so there is no consensus; Lachmann-10 assigned Variant 1 as the autographic reading by default. Variant 1 is the reading of most of the witnesses in the Egyptian text tradition headed by exemplar Ex-262#. Variant 2 is the reading of a few later-generation witnesses in the Egyptian text tradition. Variant 3 is the reading of all the witnesses in the Antiochan text tradition headed by exemplar Ex-263#, and of a few later-generation witnesses in the Egyptian and Western text traditions. Variant 4 is the reading of nearly all the witnesses in the Western text tradition headed by exemplar Ex-267#, and of MS W\* and its correctors in the Egyptian text tradition. While there is no consensus among the first-generation readings as recorded in the NA-27 textual apparatus, all variants have consensus for the words ὁ μονογενὴς “the only begotten.”

---

<sup>11</sup> Ehrman, p. 78.

<sup>12</sup> 1:18,1.1; 2:17,1.1; 2:24,1.1; 3:15,1.2; 3:27,1.1; 6:23,2.2; 13:12,2.2; 13:36,1.1; 15:26,1.1; 17:11,4.1; 18:23,1.1; 18:34,2.1; 19:38,7.1; 20:20,2.1; 20:21,2.1; 21:3,1.1.

**Figure 4.8**  
**Distribution of 1:18**

Variants 3 and 4, the readings of the Antiochan and Western text types respectively, have consensus for the word υιος “Son” over Variant 1, θεος “God,” the reading of the Egyptian text. Likewise, Variant 4 is the only reading having ἐν μὴ “except.” Finally, bringing together the combined internal consensus of all three text traditions, Variant 3 is discovered to have that consensus, and so is the preferred autographic reading. Consequently, based on the genealogical

evidence and the combined internal consensus, Variant 1, Ehrman's orthodox corruption, does not merit being part of the canonical text.

### John 1:34

Ehrman argued that in the original text of the Gospel of John, at the baptism of Jesus, John the Baptist introduced Jesus as the *Elect* of God, and later orthodox scribes changed the word *Elect* to *Son*. He stated:

In the majority of textual witnesses, the testimony of John the Baptist to Jesus reads: "And I have seen and borne witness that this is the Son of God" (οὗτός ἐστιν ὁ υἱὸς τοῦ θεοῦ; [John] 1:34). But there is solid reason for thinking that the reading preserved in a range of early and significant manuscripts is to be preferred: ". . . that this is the Elect (ὁ ἐκλεκτός) of God."<sup>13</sup>

At this place there three variant readings:

- (1) ὁ υἱος: the Son
- (2) ο ἐκλεκτος: the Elect
- (3) electus filius: Elect Son

Figure 4.9 displays the distribution of these variants throughout genealogical history. Variant 1 has the consensus of all three first-generation recensions, so it was selected as the autographic reading. In fact, it is the reading of most of the witnesses in all three text traditions. The alternate readings are rare and genealogically independent, appearing randomly in genealogical history. The genealogical evidence indicates that Ehrman's hypothesis has very little chance of being valid.

### John 7:46

Ehrman asserted:

In other occasions scribes have simply interpolated references to Jesus' "humanness" into passages that otherwise say nothing directly about it. In John 7:46, the servants of the high priests and Pharisees return to inform their leaders about Jesus: "No man has ever spoken thus (οὐδέποτε ἐλάλησεν οὕτως ἄνθρωπος). As it stands, the text is ambiguous with respect to its conceptualization of Jesus: does it mean that among humans, he is the best teacher, or that his teachings are not those of a mortal? The ambiguity is relieved by the change attested in a vast array of witnesses as early as the third-century manuscript p<sup>66</sup>. Here the servants state that "No man has ever spoken as this man speaks."<sup>14</sup>

---

<sup>13</sup> Ehrman, p. 69.

<sup>14</sup> Ehrman, pp. 237-38.

**Figure 4.9**  
**Distribution of 1:34**

In this passage there are three variants:

- (1) 'ἐλάλησεν οὕτως ἀνθρώπος: [never] has a man spoke thus
- (2) οὕτως 'ἐλάλησεν ἀνθρώπος ὡς οὗτος ὁ ἀνθρώπος: [never] has a man spoke thus as this man [has]

- (3) outwj anqrwpōj äv̄lalsen wj outōj lalei o anqrwpōj: [never] has a man spoke thus as this man spoke

Figure 4.10 displays the distribution of these variants throughout genealogical history. Variant 2 has the consensus of two of the three first-generation recensions: the Western text tradition headed by exemplar Ex-267#, and the Antiochan text tradition headed by exemplar Ex-263#.

So, it was selected as the autographic reading. It is the reading of nearly all the witnesses in both traditions and of some of the witnesses in the Egyptian text tradition. Variant 1 is the reading on most of the witnesses in the Egyptian text tradition headed by exemplar Ex-262#. Variant 3 occurs rarely and genealogically independent, being randomly distributed in genealogical history. The genealogical evidence indicates that Variant 2, the more orthodox reading, is original, and that Ehrman's hypothesis is unlikely.

### ***Other Variants of Theological Interest***

The following is a discussion of some other passages in John where doctrinal issues have been raised by advocates of the Byzantine text tradition.

#### **John 3:13**

"No one has ascended to heaven but He who came down from heaven, *that is*, the Son of Man who is in heaven." Some witnesses contain the last phrase "who is in heaven" and some do not. Advocates of the Byzantine text regard the absence of this phrase to be detrimental to the doctrine of the deity of Christ. There are two variant readings here; variant 1 lacks the phrase and variant 2 contains it. Figure 4.11 displays the distribution of these variants throughout genealogical history.

Variant 2 has the consensus of two of the three first-generation recensions, headed by exemplars Ex-263# and Ex-267#, so it was selected as the autographic reading. The phrase is missing in all the witnesses of the Egyptian text tradition (Ex-262#) except the sixth-generation branch headed by exemplar Ex-243 containing Variant 2. The genealogical evidence affirms that the clause was original.

#### **John 6:47**

"Most assuredly, I say to you, he who believes in Me has everlasting life." In this verse, some witnesses read "he who believes," some read "he who believes in Me," and some read "he who believes in God." Advocates of the Byzantine text regard the phrase "in Me" to be significant to the doctrine of Christ being the object of saving faith. There are three variant readings here; variant 2 has the phrase "in Me," variant 3 contains the phrase "in God," and variant 1 has neither. Figure 4.12 displays the distribution of these variants throughout genealogical history.

**Figure 4.11**  
**Distribution of 3:13**

**Figure 4.12**  
**Distribution of 6:47**

Variant 2 has the consensus of two of the three first-generation recensions: Exemplar Ex-263#, the head of the Antiochan text tradition, and exemplar Ex-267#, the head of the Western text tradition; so it was selected as the autographic reading—the phrase was contained in the original text. The phrase was contained in all the witnesses of the Western text tradition headed by exemplar Ex-267#, and in all the witnesses of the Antiochan text tradition headed by exemplar Ex-263#. It was also contained in the witnesses of the fifth-generation branch of the Egyptian text

tradition headed by exemplar Ex-243. The phrase (variant 1) was lacking from most of the witnesses in the Egyptian text tradition headed by exemplar Ex-262#, except for the witnesses in fourth-generation sub-branch headed by exemplar Ex-243.

Variant 3 occurs only in Syriac translations sy<sup>^</sup>c and sy<sup>^</sup>s in first-generation exemplar Ex-263# in the Antiochan text tradition. The genealogical evidence verifies that the phrase “in Me” was original.

### **John 16:16**

“A little while, and you will not see Me; and again a little while, and you will see Me, because I go to the Father.” In this verse, some witnesses contain the clause “because I go to the Father,” and some lack it. Supporters of the Byzantine text regard this clause as theologically significant because it supports the deity and resurrection of Jesus, and the clause is missing in many modern translations. There are two variant readings here; variant 1 lacks the clause and variant 2 contains it. Figure 4.13 displays the distribution of these variants throughout genealogical history.

Variant 1 has the consensus of two of the three the first-generation recensions (Ex-262#, the text from which the Egyptian text tradition was derived, and Ex-263#, the text from which the Antiochan text tradition was derived); it was selected as the autographic reading on this basis. It has the support of nearly all the witnesses in the Egyptian text tradition and the first-generation witnesses of the Antiochan text tradition.

Variant 2 occurs in all of the witnesses in the Western text tradition headed by exemplar Ex-267#; it also occurs in one fourth-generation branch headed by exemplar Ex-243 of the Egyptian text tradition.

Significantly, variant 2 is supported by all the witnesses in the Antiochan text tradition headed by second-generation exemplar Ex-256. The reading of the head exemplar of the Antiochan text tradition (Ex-263#) was determined by deference to the reading of NA-27 because of ambiguity between variant 1 (the reading of exemplar Ex-219) and variant 2 (the reading of exemplar Ex-256). But in this case it seems to have been the wrong decision because it rests only on the reading of MS D05\* and its correctors—a witness known for its diversity. It seems ill-advised to allow the witness of one diverse manuscript to overrule the consensus of the entire remaining Antiochan tradition. It is better to regard Variant 2 as the reading of exemplar Ex-263#.

the clause “because I go to the Father” as original on the basis of the genealogical evidence. Consequently, the autograph should contain the clause, based on the consensus of two text traditions: the Western, headed by exemplar Ex-267#, and the Antiochan, headed by exemplar Ex-263#.

**Figure 4.13**  
**Distribution of 16:16**

### *Tracing Any Variant*

The above studies trace the history of variants of particular interest using the computer program Lachmann-10. But one may trace the history of any other desired variant using the information in Appendices D, F, and H. For example, to trace the history of the five variants at variation unit 328 at 6:24, take the following steps:

**Step 1:** Using Appendices D and F, find the variant readings.

Appendix F says

|       |          |          |                        |
|-------|----------|----------|------------------------|
| 328.1 | 6:24,3.1 | Ex-274\$ | ‘αὐτοὶ εἰς τὰ πλοῖα ῥα |
| 328.3 | 6:24,3.3 | it-b*    | αὐτοὶ τὰ πλοῖα ῥ.      |
| 328.4 | 6:24,3.4 | 01*      | εἰς τὸ πλοῖον          |
| 328.5 | 6:24,3.5 | Ex-270\$ | αὐ. εἰς τὰ πλοῖα       |

That is, variant 1 is ‘αὐτοὶ εἰς τὰ πλοῖα ῥα “they [got] into the little boats,” initiated in exemplar Ex-274\$.

Variant 3 is αὐτοὶ τὰ πλοῖα ῥα “they [got into] the little boats,” initiated in Old Latin translation it-b\*.

Variant 4 is εἰς τὸ πλοῖον “[they got] into the boat,” initiated in MS 01\*.

Variant 5 is αὐτοὶ εἰς τὰ πλοῖα “they [got] into the boats,” initiated in virtual exemplar Ex-270\$.

Appendix D says

|       |          |                 |      |
|-------|----------|-----------------|------|
| 328.2 | 6:24,3.2 | αὐτοῖς πλοῖα ῥ. | 0.67 |
|-------|----------|-----------------|------|

That is, the autographic reading is the second variant (328.2), αὐτοῖς πλοῖα ῥα “they [got into] little boats,” and that its probability is 0.67 (67%).

**Step 2:** Using Appendix H, find where these variants were initiated in the history of the text.

Appendix H says

|       |          |                                                                  |
|-------|----------|------------------------------------------------------------------|
| 328.1 | 6:24,3.1 | [N*%]<4>; [Ex-234]<6>; [Ex-262#]<1>; [Ex-269\$]<1>; Ex-274\$<1>; |
| 328.2 | 6:24,3.2 | Autograph;                                                       |
| 328.3 | 6:24,3.3 | it-b*<4>;                                                        |
| 328.4 | 6:24,3.4 | 01*<5>;                                                          |
| 328.5 | 6:24,3.5 | [it-q*%]<3>; [Ex-256]<2>; Ex-270\$<1>;                           |

That is, the first variant was initiated in exemplar Ex-260#, and by mixture it was subsequently introduced in [N\*%]<4>, [Ex-234]<6>, [Ex-262#<1>], [Ex-269\$<1>], and [Ex-274\$<1>]. The second variant was the autographic reading, and was not subsequently initiated elsewhere. The third variant was initiated only in Old Latin translation it-b\*. The fourth variant was initiated only in MS 01\*; and the fifth variant was initiated in virtual exemplar Ex-270\$, and subsequently by mixture in [Ex-256] and [it-q\*%]<3>.

**Step 3:** copy figure 3.1a from chapter 3 on a separate sheet of paper, as on the next page, and write the variant numbers at the places on diagram where each variant was initiated; use green for the autographic reading (2), red for the first variant (1), blue for the third variant (3), orange for the fourth variant (4), and purple for the fifth variant (5) as illustrated in figure 4.14.

**Step 4:** Using its designated color, let the each initiated variant extend by inheritance to all its descendants down to its extant terminal witnesses, or until changed by a new initiation, as shown in figure 4.15. Witnesses marked with % are fragmentary; their readings are often lacking; they may be ignored in this step.

Figure 4.15 indicates that Variant 2 has the consensus of two of the first-generation recensions: exemplar Ex-267# the head of the Western text tradition, and exemplar Ex-263# the head of the Antiochan text tradition; so it was selected as the autographic reading. Variant 1 occurs in nearly all the witnesses of the Egyptian text tradition headed by exemplar Ex-262#, and in a few late genealogically independent witness in the Antiochan text tradition.

Significantly, variant 5 is supported by all the witnesses in the Antiochan text tradition headed by second-generation exemplar Ex-256. The reading of the head exemplar of the Antiochan text tradition (Ex-263#) was determined by resolving the ambiguity between variant 2 (the reading of exemplar Ex-219) and variant 5 (the reading of exemplar Ex-256), by selecting the alternate reading with the numerically smallest value. But in this case it seems to have been the wrong decision because it rests only on the reading of MS D05\* and its correctors—a witness known for its diversity. It seems ill-advised to allow the witness of one diverse manuscript to overrule the consensus of the entire remaining Antiochan tradition. It is better to regard the reading of exemplar Ex-263# as Variant 5 on the basis of the genealogical evidence.

However, that decision results in a threeway ambiguity between variants 1, 2, and 5. But Variants 1 and 2 have consensus with respect to the word *πλοιαρία* “small boats,” which resolves the question regarding the size of the boats. Consequently, Variant 1 should be regarded as the autographic reading on the basis of semantic consensus at the first-generation level.

**Figure 4.14**  
**Illustrating Marking Places of Initiation**  
**At John 6:24,3**

**Figure 4.15**  
**Distribution of 6:24,3**

### **Conclusion**

This chapter identifies the autographic readings of the Greek text of the Gospel of John and how they were determined. It provides the genealogical history of each variant reading, locating where each reading originated, and describing how each reading was distributed by inheritance throughout that history. It discusses the principal recensions, locating their origin is history, and identifying their characteristic readings. It discusses doctrinally significant passages and shows

that the variant readings there do not alter the orthodoxy of Christian doctrine expressed in the earliest form of the text, but appear in peripheral, inconsequential branches.

## **CHAPTER 5**

### **SUMMARY AND CONCLUSIONS**

The genealogical software and the theory it emulates were successful in reconstructing a genealogical history of the Greek text of the Gospel of John. The software made use of a modified version of the textual apparatus in the 27<sup>th</sup> edition of the Nestle-Aland Greek New Testament. Using index numbers to represent the variant readings in the witnesses to the text, the computer constructed a kind of genetic code for each witness based on its unique combination of variant readings. Then employing the basic principles of heredity, a relatively simple tree diagram was constructed representing the genealogical history of the text.

Heredity is the underlying principle of genealogical relationships. Because manuscripts of a text were copied from exemplars of earlier generations of the text, of necessity they have genealogical relationships. For manuscripts, quantitative affinity (consensus of variant readings) and a sibling gene, coupled with historical directionality constitute the variables for computing genealogical heredity. For variant readings, on the other hand, the domain of heredity is limited to their place of variation. There, heredity is determined by consensus among sibling sister witnesses and by what I call evidence of variant inheritance.<sup>1</sup> The software uses the heredity of manuscripts and the heredity of variant readings to guide the reconstruction of a historical genealogical tree diagram.

Mixture occurred when a scribe copied from more than one exemplar—a primary parent exemplar and one or more secondary exemplars. The readings of a manuscript were inherited from its primary parent exemplar or borrowed by mixture from its secondary parent exemplars; otherwise a variant was newly introduced by scribal error (either accidentally or intentionally) thus initiating a new line of heredity. A good number of witnesses had no mixture, but considerable mixture occurred in others. As it turned out, the presence of mixture does not affect the reconstruction of the genealogical tree, but it is very useful in identifying the places in genealogical

---

<sup>1</sup> At any place in the genealogical history of a text, the evidence of a variant's inheritance is its presence in other witnesses of the same or earlier generations.

history where variants were initiated, in tracing the genealogical history of variants, and in identifying recensions.

### ***The Effect of Recensions***

The genealogical theory and associated software were designed to reconstruct the genealogical history of texts where the copying process was simple, without any radical discontinuities. It was anticipated that the initiation and transmission of textual variants would be gradual and that the tree would develop three or four main branches corresponding to the commonly accepted text types. However, the theory and software also made provision for radical dislocations if they perchance had occurred. As it turned out radical dislocations did occur in the form of some major and minor recensions.<sup>2</sup> Furthermore, the most radical recensions took place in the earliest generation that genealogical relationships could be reasonably determined. This information indicates that in the earliest days of New Testament history its text was in flux and its genealogical history for that time period cannot be confidently reconstructed. These details could have resulted in disappointment except that the earliest recensions, though diverse from one another, nevertheless had sufficient consensus to identify the autographic readings.

### ***Binary Branches***

The genealogical tree diagram reconstructed by the software is often binary, that is, there are only two branches where the tree divides. Table 3.3 in Chapter 3 indicates that 36 out of 110 branches were binary. Critics of the genealogical theory claim that the methodology fails whenever there are only two branches, because no consensus can exist where there are only two alternatives. That would be true except for the principle of deferred ambiguity. In such cases, where ambiguity exists in one witness, its sister has the inherited reading.

A reading has evidence of variant inheritance when it is also found in witnesses of earlier generations. A reading will not be found in any witness dating in a generation prior to the one in which the reading first originated. Autographic readings have continual evidence of variant inheritance; all others acquire that evidence in the generation of their origin subsequent to the autograph. The evidence of variant inheritance usually decides between two equally probable readings; but where even that fails, a final appeal can be made indirectly to internal evidence. So, a binary construction does not turn out to be a crucial weakness. Still, some may be concerned that

---

<sup>2</sup> A recension is recognized by the introduction of a larger number of variants than normal in a witness, usually also accompanied by a larger number of secondary parent exemplars—mixture.

the earliest history of the text is determined by such diverse witnesses. However, Table 4.4 of Chapter 4 indicates that 94.78% of the textual decisions made in the reconstruction of the historical tree diagram were made on the basis consensus and deferred ambiguity; so diversity was not a significant deterrent. Furthermore, Table 4.5 of Chapter 4 indicates that 84.4% of the autographic readings were decided on the basis of consensus.

### ***So What!***

Someone may ask: “After all those painstaking computations, what is now known that was not already known by means of traditional textual critical methodology?” The answer should be self-evident, but for the sake of review, here is a list of the more prominent bits of knowledge the computations provide:

(1) A rigorous construction of the genealogical history of the witnesses to the text, something that did not previously exist.

(2) A precise account of the genealogical history of each variant reading, including its place of origin and subsequent distribution, something that did not previously exist.

(3) The identity of the autographic readings based on an unbiased implementation of the laws of heredity, together with the mathematical probability of each one, instead of educated estimates.

(4) An accurate description of the content and structure of the traditional text types, and their internal and external genealogical relationships, instead of educated estimates.

(5) Hopefully a better understanding of the laws of heredity as they apply to manuscripts.

The laws of heredity have been applied to the factual evidence derived from the existing witnesses to the text of John. They have been applied with mathematical precision apart for human intervention and bias. Hopefully the results provide a better understanding of the history of the text. In either case, no claim is made that the derived history and the text identified as autographic are free from uncertainty. The results are dependent on the validity of the underlying theory and its software implementation. Undoubtedly the future will bring forth improved theory and implementation.

James D. Price

June, 2017

## **APPENDIX A**

### ***List of Extant Witnesses to the Greek Text of the Gospel of John***

This appendix contains a list of the extant witnesses to the Greek text of the Gospel of John. For each witness it lists its name, date, language, content (references where readings exist), number of readings, and percentage of completeness. In the content column, a verse is counted as long as it has at least one extant reading.

| Name                | Date | Lang. | Content                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Number of Readings | Percent |
|---------------------|------|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|---------|

## **APPENDIX B**

### ***List of the References Associated***

### ***with Each Place of Variation***

This appendix contains a list of the references associated with each place of variation. The number to the left of the hyphen is the index number of the place of variation, and the numbers to the right constitute the reference. The reference indicates the chapter, verse, and ordered rank of the place of variation in that verse. For example, 10-1:6,2 indicates that the 10<sup>th</sup> place of variation occurs in chapter 1, verse 6, and is the 2<sup>th</sup> place of variation in that verse.

## **Appendix C**

***The Genealogical Tree Diagram of***

***The Textual History of Gospel of***

***John***

This appendix contains the tree diagram of the genealogical history of the Greek text of the Gospel of Mark. The tree is displayed vertically rather than horizontally. That is, the autograph in the upper left corner with succeeding generations indented from the left progressively downward. Sibling daughter descendants are linked by vertical lines. For example, the first-generation descendants of the autograph are Ex-260#, <sup>1</sup> Ex-261#, and Ex-265#. Only the primary exemplars are displayed, so no mixture connections are shown. The diagram spills over onto succeeding pages, but the lower-case letters at the page breaks show where the lines from one page connect to those of the next.

The format of the information on each line is as follows: (1) the name of the witness; (2) the genealogical affinity of the witness with its primary parent exemplar, enclosed in square brackets []; (3) generation from the autograph, enclosed in angular brackets <>; (4) date, enclosed in curly brackets {}; (5) the number of variants the witness differs from its primary parent, enclosed in slant marks //; (6) The number of variants in the sibling gene; and (7) the number of parents the witness has.

---

<sup>1</sup> The names of exemplars created by the software have the prefix “Ex-” followed by a number; extant witnesses have the names provided in NA-27 as modified for compatibility with the software (discussed in Chapter Two of Volume 1).

## **Appendix D**

### ***List of Autographic Readings***

#### ***For John***

This appendix contains the list of autographic readings for the Greek text of the Gospel of John as determined by the genealogical method described in this book. The list contains the index of each place of variation (variation unit), the associated reference, the Greek reading at that place, and the probability that the reading is autographic.

| VU   | Ref.     | Autographic Reading      | Prob. |
|------|----------|--------------------------|-------|

## **Appendix F**

***Places Where the Non-Autographic Variants Were Initiated***

***Only Once in the Textual History of John***

***Arranged in Order by Reference***

This appendix lists the place in the genealogical history of the text of the Gospel of Luke where each non-original textual variant was first initiated, arranged in order by reference. For each variant, the table lists (1) the place of variation in the text where the variation occurred, (2) the associated reference, (3) the exemplar or extant witness in which the variant was initiated, and (4) the text of the variant. For example, the following line means:

|     |         |         |       |
|-----|---------|---------|-------|
| 2.2 | 1:4,1.2 | Ex-267# | εστιν |
|-----|---------|---------|-------|

- (1) 2.2 refers to the second variant at variation unit two.
- (2) 1:4,1.2 is the reference where this place of variation occurs: chapter 1, verse 4, the first place of variation in this verse, the second variant there.
- (3) This variant was initiated in exemplar Ex-267#.
- (4) The variant reads: εστιν = was

Since the variant was first initiated in an exemplar, one can presume that the variant was inherited by all of the descendants of that exemplar (Ex-267#) unless otherwise altered in one of its subsequent branches.

The following line means:

|     |         |      |        |
|-----|---------|------|--------|
| 4.2 | 1:6,1.2 | D05* | κυριου |
|-----|---------|------|--------|

- (1) 4.2 refers to the second variant at variation unit four.
- (2) 1:6,1.2 is the reference where this place of variation occurs: chapter 1, verse 6, the first place of variation in this verse, the second variant there.
- (3) This variant was initiated in exemplar MS D05\*, an extant manuscript, a terminal witness
- (4) The variant reads: κυριου = of the Lord.

Since the variant was initiated in a terminal witness, it is a singularity with no inheritance.

The following line means:

|     |         |          |    |
|-----|---------|----------|----|
| 5.2 | 1:6,2.2 | Ex-274\$ | ην |
|-----|---------|----------|----|

- (1) 5.2 refers to the second variant at variation unit five.
- (2) 1:6,2.2 is the reference where this place of variation occurs: chapter 1, verse 6, the second place of variation in this verse, the second variant there.
- (3) This variant was initiated in exemplar Ex-274\$, a virtual exemplar, a source of mixture.
- (4) The variant reads: ην = was.

## **Appendix G**

***Places Where the Non-Autographic Variants Were Initiated***

***in the Textual History of John***

***Arranged in Order by Witness***

This appendix lists the place in the genealogical history of the text of the Gospel of John where each non-original textual variant was first initiated, arranged in order by witness. For each witness, the table lists (1) the exemplar or extant witness in which the variant was initiated, (2) the place of variation in the text where the variation occurred, (3) the associated reference, (4) the text of the variant. For example, the following line means:

|                   |        |           |         |
|-------------------|--------|-----------|---------|
| P <sup>22</sup> % | 1206.1 | 16:32,1.1 | ἦλκυθεν |
|-------------------|--------|-----------|---------|

- (1) This variant was initiated in MS P<sup>22</sup>%, a fragment.
- (2) 1206.1 refers to the first variant at variation unit 1206.
- (3) 16:32,1.1 is the reference where this place of variation occurs: chapter 16, verse 32, the first place of variation in this verse, the first variant there.
- (4) The variant reads: ἦλκυθεν = has come.

Since the variant was first initiated in a manuscript, it a singularity having no prior history.

The following line means:

|        |      |          |              |
|--------|------|----------|--------------|
| Ex-239 | 16.3 | 1:19,2.3 | επερωτησωσιν |
|--------|------|----------|--------------|

- (1) This variant was initiated in exemplar Ex-239.
- (2) 16.3 refers to the third variant at variation unit 16.
- (3) 1:19,2.3 is the reference where this place of variation occurs: chapter 1, verse 19 the second place of variation in this verse, the third variant there.
- (4) The variant reads: επερωτησωσιν = may ask.

Since the variant was first initiated in an exemplar, one can presume that the variant was inherited by all of the descendants of that exemplar (Ex-239) unless otherwise altered in one of its subsequent branches.

## **Appendix H**

***Every Place Where a Variant is Initiated***

***in the Textual History of John***

***Arranged in Order by Reference***

***Total = 2745***

This appendix lists every place a variant is introduced into the textual history of Mark either initially or later by mixture. The information is arranged in order by reference as follows: (1) place of variation, (2) reference, (3) witness(es) where variant was initiated. Those witnesses enclosed in square brackets [] are places where the variant was introduced by mixture; those not enclosed are where the variant first originated. The number enclosed in <> is the generation of the preceding witness. For example, the following line means:

|     |         |                       |
|-----|---------|-----------------------|
| 1.1 | 1:3,1.1 | [565*]<7>; Autograph; |
|-----|---------|-----------------------|

- (1) 1.1 refers to the first variant in variation unit 1.
- (2) 1:3,1.1 is the reference where this place of variation occurs: chapter 1, verse 3, the first place of variation in this verse, the first variant there.
- (3) *Autograph* means that the variant was initiated in the autograph; it was also initiated by mixture in MS 565\*

Since the variant was first initiated in an exemplar, one can presume that the variant was inherited by all of the descendants of the autograph unless otherwise altered in one of its subsequent branches.

The following line means:

|     |         |                                                                                       |
|-----|---------|---------------------------------------------------------------------------------------|
| 1.2 | 1:3,1.2 | [01*]<5>; [Cl <sup>b</sup> %]<2>; [Ex-219]<2>; [Ex-248]<5>; [Ex-257]<2>; Ex-269\$<1>; |
|-----|---------|---------------------------------------------------------------------------------------|

- (1) 1.2 refers to the second variant in variation unit 1.
- (2) 1:3,1.2 is the reference where this place of variation occurs: chapter 1, verse 3, the first place of variation in this verse, the second variant there.
- (3) The variant was first initiated in first-generation virtual exemplar Ex-269\$, and subsequently initiated by mixture from Ex-285\$ into [01\*]<5>; [Cl<sup>b</sup>%]<2>; [Ex-219]<2>; [Ex-248]<5>; and [Ex-257]<2>.
- (4) Since the variant was first initiated in a virtual exemplar, one may safely assume that the variant randomly happened by scribal accident and not by actual mixture in a context of actual genealogical descent.

|      |          |                                                                                                 |

## Glossary of Terms

Boldfaced words in the following definitions refer to other terms defined in this glossary.

**Autograph:** The original document written by the hand of its author or by his secretary to whom he dictated its text.

**Autographic Text:** The words originally written in an original document.

**Commonness:** A measure of the degree to which **witnesses** to a given text share the same value of a genetic characteristic of the text. See Commonness of Place of Variation and Commonness of Reading.

**Commonness of Place of Variation [CP]:** The degree to which two **witnesses** to a given text have the same **places of variation** regardless of the **readings** at those places—that is, they share a common portion of the text. The Commonness of Place of Variation of A with B  $[CP(A,B)]$  = the number of **places of variation** where both A and B have a **reading**, where A and B are **witnesses** to the same text. This measure is important for dealing with fragmentary **witnesses**. Two **witnesses** that both have a complete text have 100% Commonness of Place of Variation.

**Commonness of Readings [CR]:** A measure of the degree to which two **witnesses** to a text have the same **readings**. It is calculated as follows: The Commonness of Readings of A with B  $[CR(A,B)]$  = the number of **places of variation** where both A and B have the same **reading**, where A and B are **witnesses** to the same text.

**Completeness [Cmp]:** A measure of how much of a text a particular **witness** contains. It is calculated as follows: The Completeness of A  $[Cmp(A)]$  = (the number of **places of variation** A has of the text)  $\div$  (the total number of **places of variation** in the text), where A is a **witness** to the text. This measure is important for dealing with fragmentary **witnesses**.

**Complexity:** In the context of a branch of the genealogical tree, complexity is defined as the number of **exemplars** in the branch plus the number of new **variant readings** initiated in the branch.

**Content:** A list of the **places of variation** a **witness** contains, expressed in terms of references (chapter and verse)—that is, that portion of the text the **witness** contains.

**Exemplar:** A **witness** from which other **witnesses** have been copied. The software creates exemplars in the process of reconstructing the genealogical history of the text.

**Fragment:** A **witness** that is missing part of its text due to damage or deterioration.

**Genetic Affinity [GA]:** A measure of the degree to which **witnesses** to a given text are genetically related. It is calculated as follows: Affinity of A to B  $[GA(A,B)] = (\text{the number of **places of variation** where both A and B have any **reading** [CP(A,B)]} - \text{the number of **places of variation** where A and B differ [GD(A,B)])} \div (\text{the number of **places of variation** where both A and B have any **reading** [CP(A,B)]})$ , where A and B are **witnesses** to the same text. The genetic affinity of A to B has the same value as the genetic affinity of B to A. Identical witnesses have 100% affinity.

**Genetic Distance [GD]:** The genetic distance between two **witnesses** is defined as the number of **places of variation** where the two witnesses have different **readings**.

**Genetic Dominance:** A **reading** has genetic dominance as long as it is inherited by the **descendants** of the exemplar in which it occurs. It loses genetic dominance at any place in the genetic history of the exemplar in which it occurs where an alternate reading replaces it.

**Heredity:** That characteristic of a **reading** correctly copied into a daughter **witness** of the **exemplar** in which the reading is found.

**Inheritance:** That characteristic of a **reading** correctly copied from the parent **exemplar** of the **witness** in which the reading is found.

**Majuscule:** A **manuscript** written in all capital letters.

**Manuscript:** A handwritten copy of a text made from an earlier copy (**exemplar**). The term is sometimes used as a synonym of **witness**.

**Minuscule:** A **manuscript** written in longhand characters.

**Papyri: Manuscripts** copied on paper made from papyrus. They are usually rather early, but mostly fragmentary.

**Parent Exemplar:** The **manuscript** from which another **manuscript** was directly copied.

**Place of Variation:** A place in a text where the **witnesses** to the text have different **readings**. In the data base, each place of variation is assigned a sequential index number in order to distinguish them from one another; each one also has assigned to it the chapter and verse where it occurs in the text.

**Primary Parent:** The **parent exemplar** of a **witness** from which it derives its place in the tree diagram that maps the genealogical history of the text.

**Reading:** At each **place of variation** in a text, the **witnesses** have different words. The words contained in a given witness at a particular **place of variation** constitute the *reading* of that

witness at that place. The reading may be a word, phrase, sentence, verse, etc., or nothing at all (an omission).

**Recension:** A recension is understood to be a **witness** derived from multiple sources and having a significant number of variations from its **primary parent exemplar**. A recension is a deliberate alteration of a text tradition for the purpose of correction or improvement. A recension occurred when a Christian community noted that their Bibles (**manuscripts**) had different **readings**, and there was an attempt to recover the readings of the **autograph**. This likely took place under the authority of the leadership of the community and was carried out by competent scribes. It is possible that in some recensions some of the corrections were made to strengthen the doctrines of the community.

**Secondary Descendant:** A descendant of a **secondary parent** functioning as a source of mixture for the given descendant.

**Secondary Parent:** A **parent exemplar** of a witness other than the **Primary Parent Exemplar**. Secondary parents are the sources of mixture for their secondary descendants.

**Siblings:** Sister first generation descendants of the same **exemplar**.

**Uncial:** A **manuscript** written in all capital letters.

**Variant Heredity [VH]:** The characteristic of variant readings that provides a measure of the likelihood that a given reading in a particular witness A has been inherited from another witness B in an earlier generation. It is quantified as the **genetic distance** between witness A containing the given reading and another witness B in an earlier generation containing the same reading. The witness B having the least genetic distance from witness A is the closest near relative of A with respect to the given reading. A reading has no variant heredity until after it is first initiated somewhere in the genealogical history of the text.

Variant Reading: See *Reading*.

**Variation Unit:** See *Place of Variation*.

**Version:** A translation of a document into a language other than that of the original document itself.

**Virtual Exemplar:** An **exemplar** created by the software to account for mixture in a reconstructed branch of the genealogical tree. It is a descendant of one of the exemplars in the branch, but it has no primary descendants, only secondary ones.

**Witness:** A **manuscript** of a document in its original language, or a translation of that document into another language, or a quotation of the text of a **manuscript** or translation.
