Preface to the First Edition

My interest in textual criticism was first aroused when I studied the subject in seminary in the 1950s, and my interest in tree-diagraming (also called *stemmatistics*) was first awakened when, in the 1960s, I learned to apply it to grammatical analysis and to computer aids for translation. I learned that the method works best when applied always to the most deeply imbedded unanalyzed element—that is, the element at the lowest hierarchic level. When I began using tree-diagraming techniques to teach Hebrew grammar and syntax in the 1970s, it occurred to me that the same analytic principles would logically apply to textual criticism, and that just as these principles could be implemented by computer programs for grammatical and syntactical analysis of language, so they also could be implemented for the genealogical analysis of textual criticism. Thus began a lifetime of research and experimentation to create a computer program for reconstructing the genealogical history of an ancient text based on genealogical principles and tree-diagraming.

Earlier textual scholars had determined that the key to the genealogical history of a text lies in those places in the text where its manuscript copies differ, and that the percentage of agreement between two manuscript copies at those places of variation is a measure of their genealogical affinity. I call that percentage of agreement *quantitative affinity*. Gradually over time I realized that the variant readings in a manuscript are a record of its genealogical history; its variant readings are the accumulation of the inherited genetic mutations of all its ancestor exemplars, and its variants constitute a kind of genetic DNA code. One must learn to read the history of a manuscript from its genetic code. Quantitative affinity was one of the leading principles guiding my earlier research and computer implementation.

Eventually I also realized that a manuscript inherits the unique mutant variants of its parent exemplar and only its sibling sister manuscripts share those same variant readings. That collection of variants peculiar to sibling sister manuscripts serves as their genetic marker—a kind of sibling gene. Every manuscript has a marker by which its sister manuscripts may be identified. For lack of a better term I call that marker a *sibling gene*. Now I am not naïve enough to suppose that in a collection of extant manuscripts every *sibling gene* marks real sister manuscripts, although it often does; but what it actually marks are nearest relative manuscripts having a recoverable nearest common ancestor exemplar. The presence of the sibling gene assures true genetic relationship and a consistent line of genealogical descent.

This work brings together both quantitative affinity and the sibling gene, working in harmony with tree diagramming methodology, to reconstruct parent exemplars one at a time, always for the most remote unreconstructed branch—that is, the most deeply imbedded branch, being at the lowest hierarchy or the most recent generation—to reconstruct the genealogical history of the text of an ancient document one branch at a time. The principles and analytical methods of this theory have been implemented and tested on computer software which I call Lachmann-10. That is what this work is all about.

Preface to the Revised Edition

In the first edition of this study it was decided to treat all recensions¹ the same. However, this decision turned out to be unwise, because extant witnesses having very weak inheritance² found no place in the genealogical stemma. As a result, they remained unattached in the reconstruction procedure, giving the appearance of a major recension, yet with no heredity. They may well have been just that, but in the overall genealogical considerations, they had nothing to contribute except confusion in the last stages of reconstruction. Consequently, it was decided to exclude them from the reconstruction data base, treating them instead like witnesses lacking sufficient completeness. All such witnesses were excluded and attached to the reconstructed stemma where they best fit after the reconstruction was complete.

James D. Price
Chattanooga, TN
February, 2019

¹ A recension is understood to be a witness derived from multiple sources and having a significant number of variations from its primary parent exemplar. A recension was a deliberate alteration of a text tradition for the purpose of correction or improvement.

² That is, the witness lacked quantitative affinity and genetic affinity with any other witnesses in the data base.

Acknowledgments

This work would not have gone to press without family and friends who gave me continued encouragement and assistance. Those who gave encouragement and constant impetus are too numerous to name individually. But they know how much I appreciate them. Those who helped me with editing were Jeff Bennett, Gregory Stephens, and particularly Alan Macgregor who read the manuscript twice providing improvement in clarity and readability. Finally, I can never give thanks enough to Doris, my lovely wife of sixty-eight years, for all her love, patience, and encouragement. The improvements to this work are all due to these friends and colleagues, and all the flaws are mine.

CHAPTER 1

INTRODUCTION

This book is the second in a series of studies regarding the genealogical history of the text of the Greek New Testament. Volume 1 provided the genealogical history of the Greek text of the Gospel of Matthew; this volume does the same for the Gospel of Mark. The first volume provides an introduction to textual criticism, a review of the various textual critical theories and methodologies, a description of a genealogical theory of textual criticism along with its methodology. Readers not familiar with that volume should read at least the first four chapters of that study before going further, because this work presumes the reader has that informed background. What follows is a brief summary of those chapters.

Textual Criticism

Textual criticism is the branch of literary science which studies surviving copies of ancient literature¹ with the intent of determining the original form of a literary composition.² The problem is that surviving copies of a composition differ because of scribal errors accumulated during the copying history of the composition. At certain places in the text of a composition, existing copies may differ, one having this reading, another having that reading, and yet another having the reading originally written by the author. Such places are called places of variation, and such differing readings are called textual variants. Every place of variation has at least two textual variants.

Because every manuscript is a copy of some earlier copy (exemplar), intuitively one imagines the history of the manuscripts of a composition to be like a family tree. So initially textual scholars of classical literature took this approach with some measure of success. However, when it came to the text of the Greek New Testament, scholars despaired and regarded the genealogical approach as much too complex because of the large number of manuscripts and large number of variants. So, various theories and methodologies were developed to work with the variants at each place of variation to decide which one is more likely original. But with the development of high-

¹ Literature composed before the invention of printing, copies of which exist only in handwritten documents. A handwritten copy is referred to as a manuscript.

² The original text of a composition, that is, the actual words written by the hand of its author, is referred to as its autographic text.

speed computers, the complex data processing is no longer a problem; all that is needed is a viable genealogical theory together with its associated programmable methodology. That's where this project came on the scene.

The present genealogical theory is based on several known facts about the relationship of manuscripts and variant readings. (1) It is a fact that the variants in a manuscript consist of all the uncorrected scribal errors of its ancestral exemplars; this collection of variants may be regarded as the genealogical history of the manuscript, and may be likened to its DNA code. In addition, the variants introduced by the parent exemplar of a manuscript may be regarded as its sibling gene. So, every manuscript has its own DNA and sibling gene, and these data are recoverable from the manuscript database. (2) Sibling manuscripts may be identified by mutual sibling genes, or by greatest quantitative affinity,³ or by both. (3) Sibling manuscripts are daughters of the same parent exemplar the readings of which may be recovered from the consensus of its daughters' readings, except where no consensus exists. Sibling daughter manuscripts inherit all the readings of their parent exemplar except where their own scribes initiate a new one. In case of ambiguity (where no consensus exists), one variant will have been inherited and the other will have been newly initiated. Inherited variants have history and may be identified by the principle of delayed ambiguity,⁴ whereas newly initiated variants have no history and fail the test of delayed ambiguity. (4) A reconstructed exemplar may stand in place of all its descendants in the database, and function as their representative in that stage of reconstructing the genealogical history. (5) Iteration of the above steps will converge genealogical stemma into a single exemplar representing the autographic text. The actual methodology as described in the first volume is more complex than the above, but the above is sufficient to describe the basic principles.

The Problem of Mixture

Mixture occurred when a scribe copied from more than one exemplar. Critics of the genealogical method assert that mixture creates an irresolvable complication. But, as it turned out, as far as the reconstructing procedure is concerned, a reading copied from a secondary exemplar is no different than a variant newly initiated by the scribe either by mistake or intent. Both are uninherited from the primary exemplar; the only difference is that a newly initiated variant has no history, whereas a variant borrowed by mixture has a history, but a history outside the genealogical descent of the primary exemplar. So, mixture is not a problem for the reconstruction methodology

³ Quantitative affinity is a measure of how similar two manuscripts are to one another.

⁴ The principle of delayed ambiguity says that the inherited variant will be a reading of an aunt exemplar when it develops.

described above. The sources of mixture in genealogical history may be of interest in some cases. A separate algorithm of the software finds the most likely source of every variant introduced by mixture rather than by scribal error or intent.

The Database Used

The database used in this project is derived from an expansion of the Nestle-Aland 27th edition of the *Greek New Testament*⁵ hereafter referred to as NA-27. The variations of the text are listed at the bottom of each page, providing the verse number where the variation occurs, the associated symbol indicating the kind of variation, the alternate readings that occur there, and a list of witnesses⁶ that contain the given alternate reading. The list of witnesses is provided in compressed form in order to avoid as much repetition as possible. This compressed form is useful for conserving paper and ink, and is relatively easy for scholars to follow. But the computer software must have every item of data explicitly recorded, that is, there must be a record of every witness to the text under study, and a record of which variant reading each witness has at every place of variation. This necessity requires the NA-27 database to be unpacked and expanded. Until recently the NA-27 database existed only in printed form, and expanding the data into the form needed by the genealogical software was a complex and time consuming task.⁷ However, the database is now available in digital electronic form in the *Stuttgart Electronic Study Bible*.⁸ That form of the database is capable of being expanded and unpacked electronically.

The expanded database consists of two separate files, one containing a list of every witness together with its name, date, language, and content. The second file is a list of every place of variation in the NA-27 database, the chapter and verse number where the variation occurs, the Greek text of each variant at that place of variation, along with a list of witnesses containing the given variant.

The present program, called Lachmann-10 herein, is written in the Turbo Pascal 7.0 programming language intended for IBM compatible machines with extended memory. The size of the problems it can handle is flexible and is limited only by the amount of RAM available and the speed of the machine [up to a maximum of 2,000 variation units and 2,000 manuscripts]. Large

⁵ *Novum Testamentum Graece* (Stuttgart: Deutsche Bibelgesellschaft, 1997).

⁶ The witnesses consist of individual manuscripts, translations, and patristic quotations.

⁷ All my prior research with the genealogical software was done with data manually extracted from the already expanded database in the United Bible Society's *Greek New Testament*.

⁸ Christof Hardmeier, Eep Talstra, and Bertram Salzmann, *The Stuttgart Electronic Study Bible* (Stuttgart, Germany: The German Bible Society, 2004); used with permission.

problems require a reasonable amount of time to converge on a solution. The next chapter describes the genealogical history of the extant witnesses to the Greek text of the Gospel of Mark.

CHAPTER 2

WITNESSES TO THE TEXT OF MARK

The witnesses¹ to the text of the Gospel of Mark used in this study are those derived from the electronic form of the textual apparatus of the NA-27 edition of the Greek New Testament as contained in the Stuttgart Electronic Study Bible² as edited and modified for the purposes of this project. They consist of 185 existing witness³ of various types:

(1) Papyrus manuscripts	3
(2) Uncial manuscripts	72
(3) Minuscule manuscripts	45
(4) Lectionary manuscripts	4
(5) Printed editions	4
(6) Latin Versions	24
(7) Egyptian Versions	7
(8) Syriac Versions	4
(9) Armenian Version	1
(10) Georgian Version	1
(11) Ethiopic Version	1
(12) Greek Church Fathers	12
(13) Latin Church Fathers	7

The witnesses to the text of an ancient document must have several characteristics before a reasonably reliable reconstruction of its genealogical history can be made. Among these are (1) number of witnesses, (2) date, (3) completeness, (4) limited变ability, (5) commonness of text,

¹ I use the term witness because the reconstruction of genealogical history derives evidence not only from extant manuscripts but also from ancient translations and quotations from church fathers. In addition a few printed editions are involved although not for reconstruction purposes.

² Christof Hardmeier, Eep Talstra, and Bertram Salzmann, *The Stuttgart Electronic Study Bible* (Stuttgart, Germany: The German Bible Society, 2004).

³ Appendix A lists all the extant witnesses by name, date, language, content, number of readings, and percentage of completeness.

and (6) genealogical affinity. These characteristics of the available witnesses to the text of Mark are discussed below and are shown to be suitable for a reasonable reconstruction of its textual history.

Number of Witnesses

Contrary to the number of available witnesses to the texts of ancient classical literature, there are approximately 2,328 existing Greek manuscripts of the Gospels, including about 178 fragments.⁴ This does not include the witnesses of the ancient translations and church fathers. This study makes use of the 187 witnesses to the Gospel of Mark recorded in the NA-27 apparatus which includes all the ancient papyri witnesses and most of the existing manuscripts dating before the ninth century and a good sample of those from later times. This number includes the consensus witness of the many manuscripts of the text used in the Greek speaking Byzantine churches together with a number of manuscripts related to the Byzantine text. Also it contains the consensus witness of the many manuscripts of the Latin Vulgate and the individual witness of four different printed editions of the Vulgate. The various Old Latin translations also are represented by a consensus of a number of manuscripts of each of these individual translations. Consequently, the consensus witnesses bring many additional manuscripts indirectly into the reconstruction process. There is good reason to believe that there are sufficient witnesses to the text of the Gospel of Mark to reconstruct its genealogical history.

Date

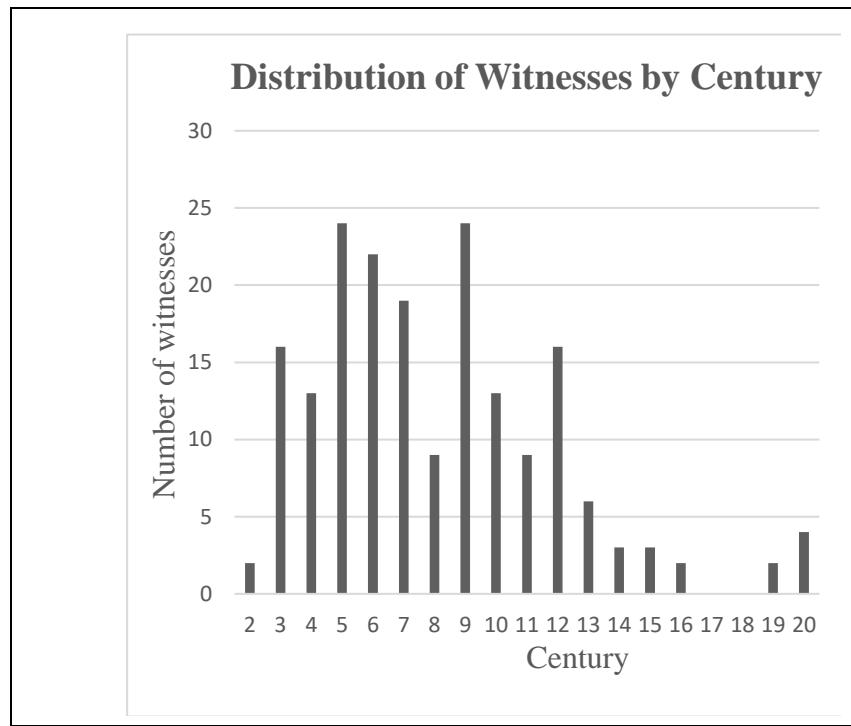

While it is possible to reconstruct the genealogical history of a text without the benefit of dates, dates are very helpful for accurately locating scribal activity in real history. The dates of the witnesses to Mark range from the second to the twentieth centuries.⁵ Table 2.1 and its associated graph display the reasonably good distribution of the witnesses by date.

⁴ Aland and Aland, p. 83.

⁵ The witnesses in the 19th and 20th centuries are printed editions that do not contribute to the reconstruction of the genealogical history.

20	4

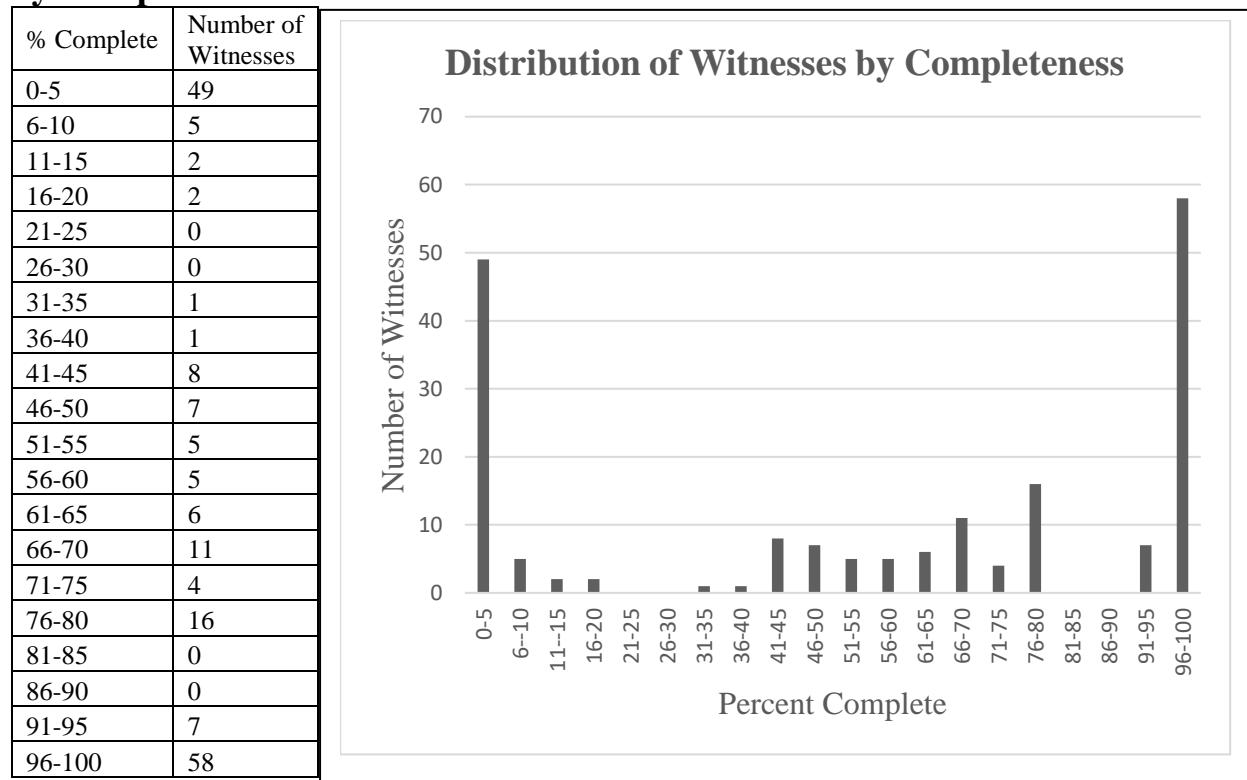

Completeness

Many of the witnesses are fragmentary, not all their text having survived the passage of time. Only 58 of the 187 witnesses have 95-100% of their text complete, and only 81 have a text 75% or more complete; thus, completeness is significant for this study. Table 2.2 and its associated graph display the distribution of completeness for the witnesses used in this study. Completeness is important for the reconstruction of the textual history, because the computer depends on minimal difference between witnesses to determine quantitative affinity. Consequently, the computer reconstructed the genealogical history on the basis of witnesses having at least 75% of their text complete;⁶ the more fragmentary witnesses are added to the genealogical tree where they best fit after the tree is constructed. The fragmentary witnesses are still important and should not be excluded from the study because they contribute to establishing fixed dates in the textual history.

⁶ For most of the books of the New Testament a completeness of 80% was sufficient for the study. But in Mark, most of the Latin witnesses had less than 80% completeness. So, the completeness limit was reduced to 75%.

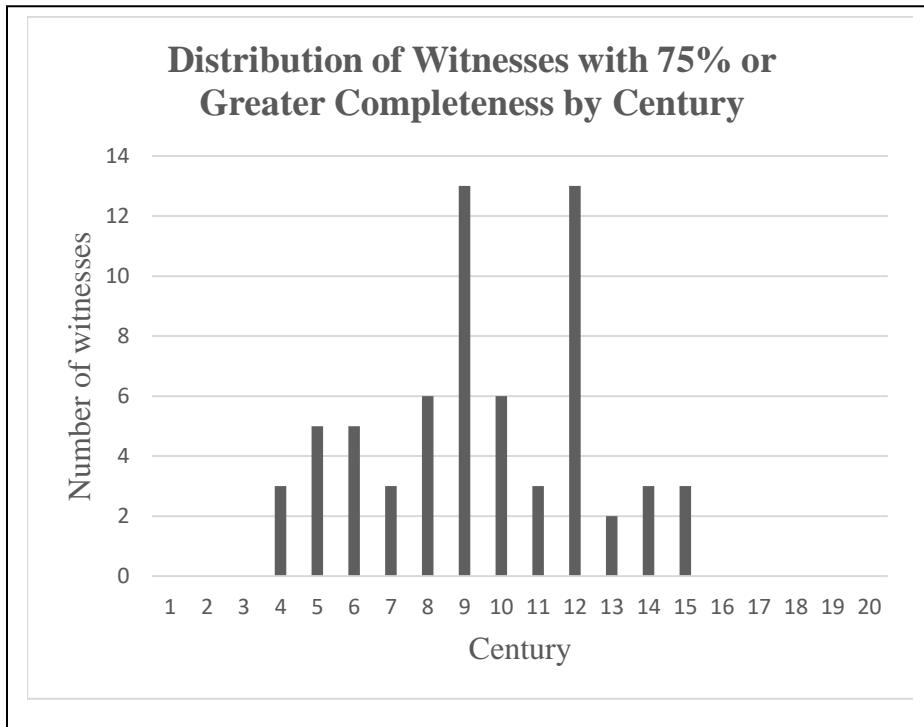

Table 2.2
Distribution of Witnesses
by Completeness:

Because many of the witnesses are fragmentary, it is of interest to know the distribution of those witnesses having 75% or greater completeness. They are the ones that contribute to the reconstruction of the genealogical history. Table 2.3 and its associated graph display the distribution of these witnesses. It is evident that numerous contributing witnesses are from as early as the fourth century, so a reasonably good reconstruction can be expected.

Limited Diversity

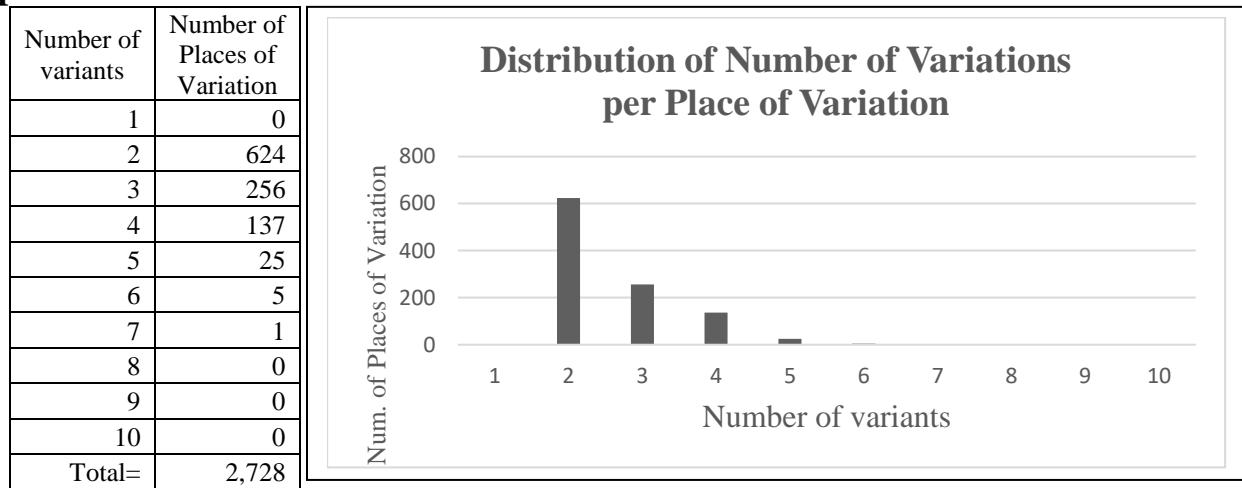

The more diverse the text the more difficult the reconstruction of its textual history is. In the overall picture, all witnesses to Mark agree in over 90% of the text. The places of variation and the number of variants at those sites provide the data for reconstruction. However, even so, the number of places of variation and the number of variants constitute a limit to what can be reconstructed because of the magnitude and complexity of the problem. But modern technology has expanded that limit to where reconstruction is now possible for texts the size and diversity of Mark. The NA-27 apparatus records 1,048 places of variation⁷ for the Gospel of Mark with a total of 2,726 variant readings distributed among them.⁸ This averages out to 2.60 variants per place of variation. In earlier decades this amount of information would have been impossible to manually process, but not so today; my desktop computer provides complete solutions to problems this size in just a matter of minutes. Table 2.4 and its associated graph display the distribution of the number

⁷ Of course there are more places of variation than this, but the editors of the NA-27 text have weeded out those that are insignificant for reconstruction and meaning.

⁸ Appendix B provides a map showing where the places of variation occur in the text by chapter and verse.

of variations per place of variation. For example, 623 places of variation have only two variations whereas only one place of variation has seven variations.

Table 2.4
Distribution of Number of Variations
per Place of Variation

The NA-27 apparatus records seven different types of variations to the text. Table 2.5 displays the distribution of these types of variation for the Gospel of Mark. While the type of variation has no significance for the reconstruction process, the information is provided for those who are interested.

Table 2.5

Alternate words	1017
Transposed words	63
Added word or phrase	401
Other	4
Total =	2,728

Limited Diversity of Witness

Ordinarily, witnesses have sufficient mutual affinity to facilitate finding their siblings. But a few witnesses occur that have such a diverse text that no siblings for it can be found except its own correctors. I refer to these witnesses as *diversity mavericks*. Such diverse witnesses are problematic for the reconstruction procedure and must be excluded from that procedure; they are added to the genealogical tree where they best fit after the reconstruction procedure is complete. The

following table lists the diversity mavericks in Luke together with their quantitative affinity with the exemplar where they best fit.

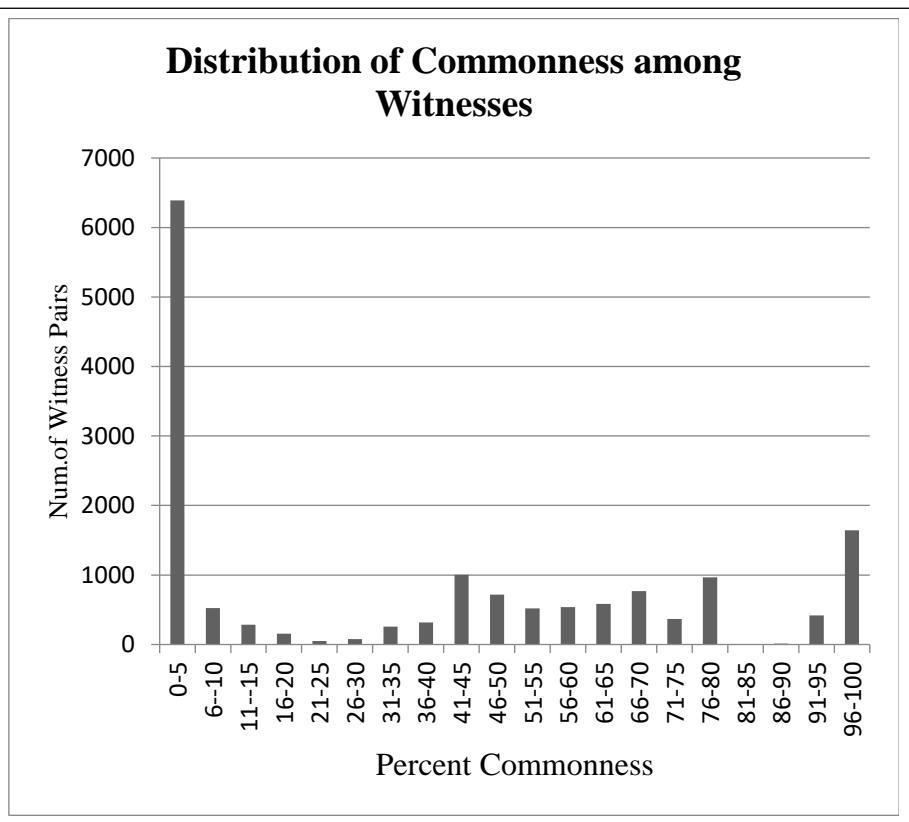

Witness	% Affinity	Witness	% Affinity
D05*	73.53	W*	60.73
D05^c	73.76	W^c	60.73
D05^1	73.77	33*	76.86
D05^2	73.85	33^c	76.71
038*	69.82	it-d	73.68
038^c	69.82	vg^a	94.83

Commonness of Text

Commonness is a measure of the percentage of text two witnesses have in common. When two witnesses both have complete texts, that is, they are not fragmentary, having readings at every place of variation, they have 100% commonness, regardless of the agreement or disagreement of their readings. Fragmentary witnesses, however, are less than complete and may actually have no commonness of text. For example, witness A may be 40% complete, lacking the text for the last 60% of the places of variation, and witness B may be 40% complete, lacking the text for the first 60% of the places of variation; as a result, the two witnesses have no commonness of text. The greater the commonness of text two witnesses have the greater potential they have for genealogical affinity. Table 2.6 and its associated graph display the distribution of commonness each witness shares with every other witness for the Gospel of Mark.

Table 2.6
Distribution of Commonness of
Text among Witnesses

% Commonness	Number of witness pairs
0-5	6392
6-10	522
11-15	285
16-20	157
21-25	48
26-30	79
31-35	256
36-40	316

46-50	719
51-55	521
56-60	536
61-65	582
66-70	770
71-75	368
76-80	966
81-85	0
86-90	15
91-95	420
96-100	1645

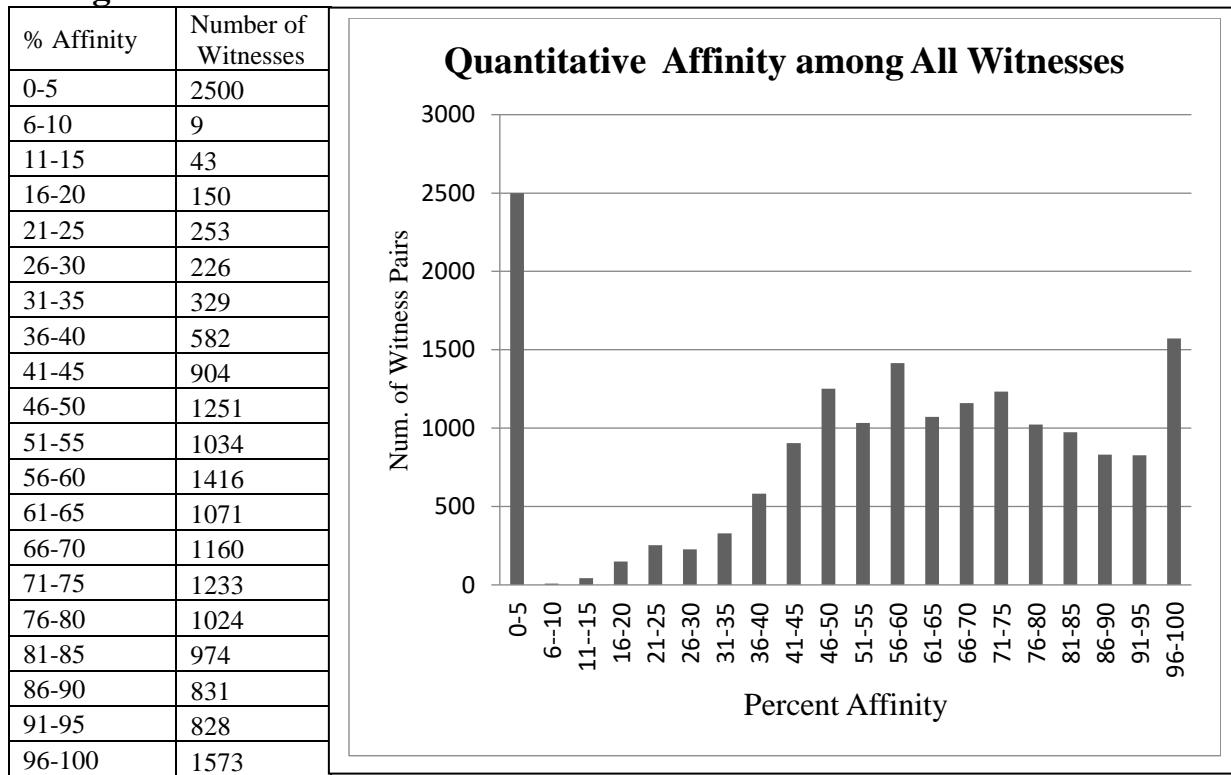

Quantitative Affinity

Quantitative affinity⁹ is a measure of how strongly two witnesses are genealogically related. Witnesses are genealogically related when they have many of the same readings at their shared places of variation. Quantitative affinity is determined by the number of places of variation where the witnesses have the same reading divided by the number of places of variation the witnesses have in common. For example, if witness A and witness B have 1,000 places of variation in common, and in 952 places they have the same reading, the quantitative affinity of A to B is $952 \div 1,000 = 0.952$ or 95.2%. Table 2.7 and its associated graph display the distribution of quantitative affinity among all the pairs of witnesses for the Gospel of Mark. It is evident that many of the extant witnesses to Mark have relatively strong quantitative affinity with one another. These data are skewed because of the many fragmentary witnesses.

⁹ Quantitative affinity is supplemented by the sibling gene to affirm sibling relationship.

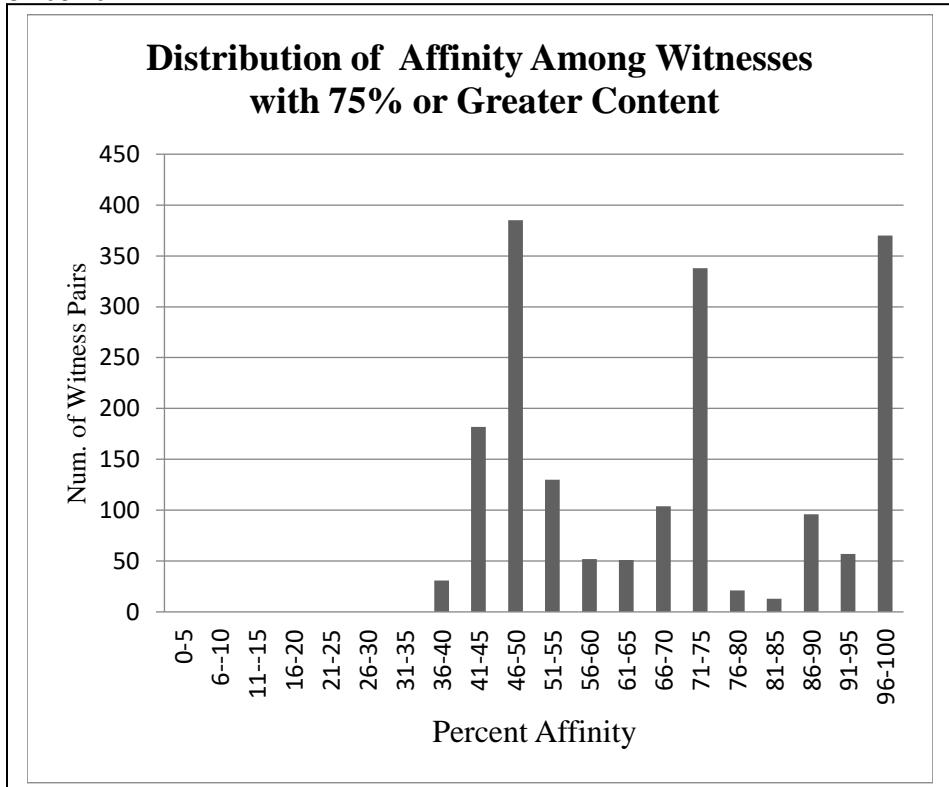

Table 2.7
Distribution of Quantitative Affinity
Among all Witnesses

A better picture of the significant affinity is that which is among witnesses having 75% content or greater. These witnesses are the ones used to reconstruct the genealogical history. Table 2.8 and its associated graph display the distribution of quantitative affinity among witnesses having 75% content or greater. This suggests that reconstruction of the genealogical history is reasonably feasible.

Table 2.8

96-100	382

Conclusion

There are sufficient witnesses to the text of the Gospel of Mark with dates distributed over the historical period of interest, being sufficiently complete, having relatively limited diversity, and having ample mutual commonness and strong genealogical affinity. There is good reason to expect that the genealogical history derived from these witnesses will be a good approximation of the actual textual history of the book.

CHAPTER 3

GENEALOGICAL HISTORY OF MARK'S MANUSCRIPTS

This chapter presents the genealogical history of the manuscripts¹ of the Greek text of the Gospel of Mark as reconstructed by computer program Lachmann-10.² Beginning with a data base of 187 existing witnesses, 1,048 places of variation, and 2,726 variants, the program reconstructed 22 intermediate exemplars, arranging them in the genealogical stemma (tree diagram) presented in its full form in Appendix C, but in a condensed form in Figure 3.1.³ This condensed form portrays the genealogical interrelationship of all the reconstructed exemplars of the text of Mark including most of the terminal (extant) witnesses. The rectangular boxes contain the information for the exemplars created by the software and the boxes with rounded corners contain the information for the extant witnesses. Witnesses in the same box are siblings. Figure 3.2 displays a second tree diagram in which the exemplars are shown with only one principal extant witness, usually the most prominent one; but one may assume that its sibling sisters usually have the same reading. Figure 3.3 displays the tree with all the technical data. All the data and diagrams contained in this chapter were derived from the monitor screen of Lachmann-10 or the report it created.

The head exemplars of the four main branches of the stemma are exemplars Ex-206#, the Caesarean recension; Ex-208#, the Egyptian recension; Ex-205#, the Western recension; and Ex-202#, the Antiochan recension. These branches are relatively independent of one another, having mutual affinities ranging from 60% to 80%. But they have affinities with the autograph ranging from 74% to 87%. In addition, the sibling gene of each uniquely distinguishes them from one another. The following table displays the number of places in the text where they differ, and their mutual affinities. For example, Ex-202# differs from Ex-205# by 221 variants and they have a mutual affinity of 74%. In every case they have a greater affinity with the autographic text than with one another.

¹ The term *manuscript* is used here in its inclusive sense of manuscripts, translations, church fathers, and reconstructed exemplars—the sense I usually assign to the term *witness*.

² The total computing time was one minute and forty-three seconds including the time required for the software to assemble and format all the information contained in the tables, diagrams, and appendices of this book.

³ The full diagram, displayed in Appendix C, requires six pages. The condensed form deletes all the technical information, leaving only the names of the extant witnesses. Likewise it omits exemplars that only account for same-generation mixture (those with a \$ sign attached to their name).

	Ex-202#	Ex-205#	Ex-206#	Ex-208#	Autog.
Ex-202#		74%	80%	60%	85%
Ex-205#	221		71%	67%	87%
Ex-206#	211	243		66%	83%
Ex-208#	423	281	361		74%
Autog.	157	111	182	275	

Condensed Genealogical Stemma-1

Figure 3.1 displays the tree diagram (stemma) of the genealogical history of the text of Mark. It includes the most prominent main branch headed by exemplar Ex-202#, the Antiochan recension. The other branches are displayed in sub-figures 3.1.2 through 3.1.4. This text tradition extends through five generations of genealogical history. The Byzantine consensus witnesses pm^ab and pm^ac are descendants of second-generation exemplar Ex-198, whereas the other Byzantine consensus witness, pm^aa is a descendant of fourth-generation exemplar Ex-189. The texts of Hodges and Farstad (HF), of Robinson and Pierpont (RP), and Scrivener's Textus Receptus (TR) found their best fit as descendants there as well.

Figure 3.1
Condensed Genealogical Stemma-1 of Mark

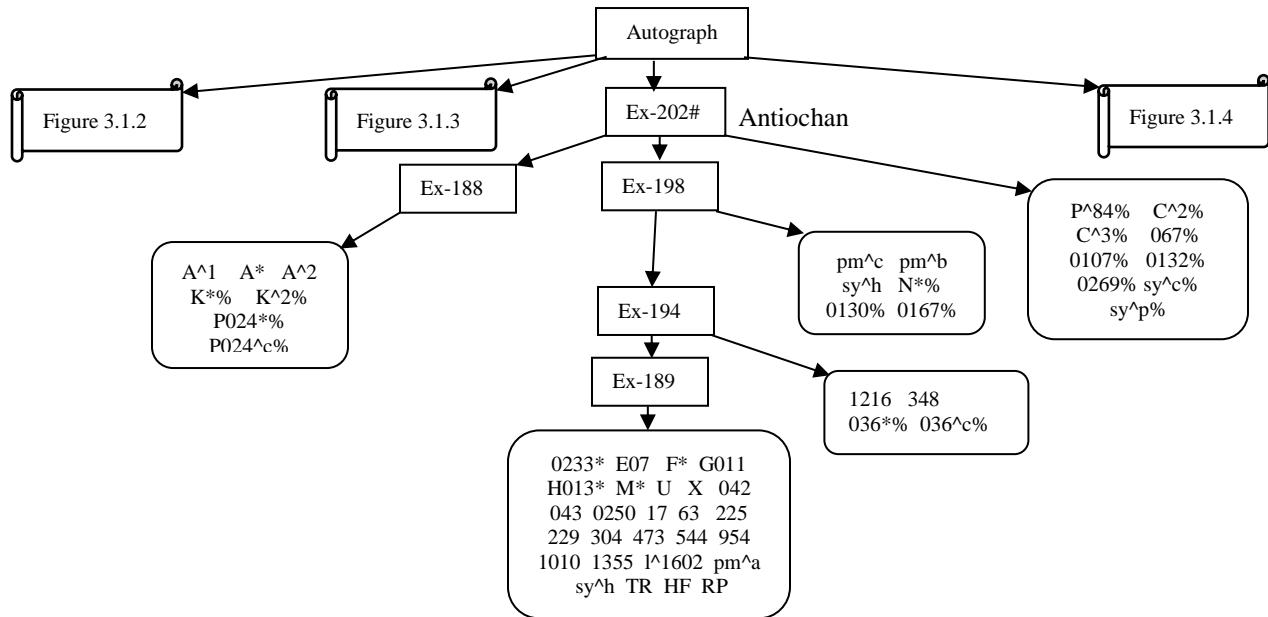

Figure 3.1.2 displays the genealogical history of the Western text tradition which was derived from exemplar Ex-205#, the Western recension. It contains nearly all the Latin translations, together with the Latin fathers, and strangely the Syriac translation (sy[^]s%). The tradition extended through four generations of genealogical history.

The Latin Vulgate witnesses occur as descendants of the first-generation exemplar Ex-205#, the recension itself, along with a number of Greek uncial fragments. Codex Bezae (D05*) and its correctors along with it-d, maverick recensions excluded from the reconstruction process, found their best fit among the descendants of third-generation exemplar Ex-203, but even there it had only 73% affinity with its parent exemplar.

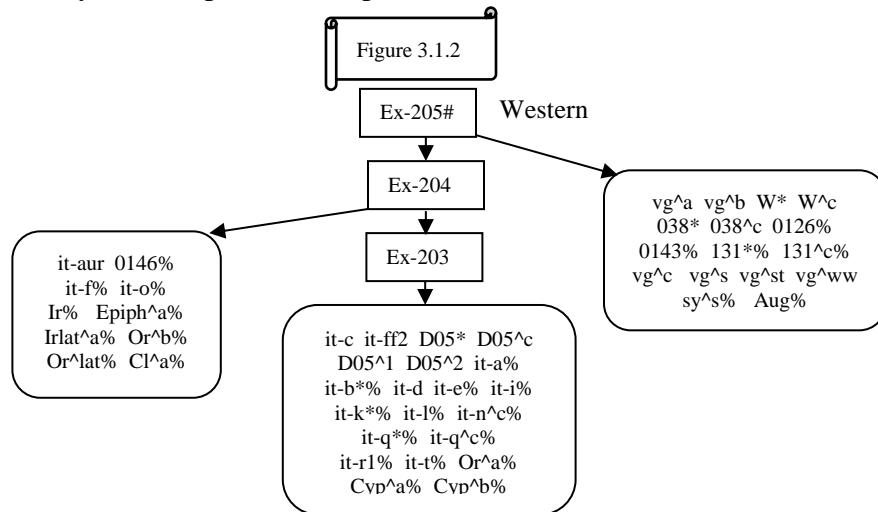

Figure 3.1.3 displays the genealogical history of the Caesarean text tradition which was derived from exemplar Ex-206#, the Caesarean recension. In the first edition of this study, the Caesarean text was not isolated as an independent tradition, because the diversity-maverick witnesses were not excluded from the reconstruction procedure. When that was done this time, this independent text tradition was manifested. This tradition extends in genealogical history for four generations. Its principal witnesses are family 1 and family 13, but these occur in different sub-branches. Family 1 is a descendant of second-generation exemplar Ex-191, whereas family 13 is a descendant of second-generation exemplar Ex-193. While they are genealogically related, MS 1 differs from MS 13 by 319 variants with a mutual affinity of only 69%. Several fragmentary witnesses found their best fit as descendants of the Caesarean recension itself, including some church fathers. Interestingly, this tradition has no translation witnesses.

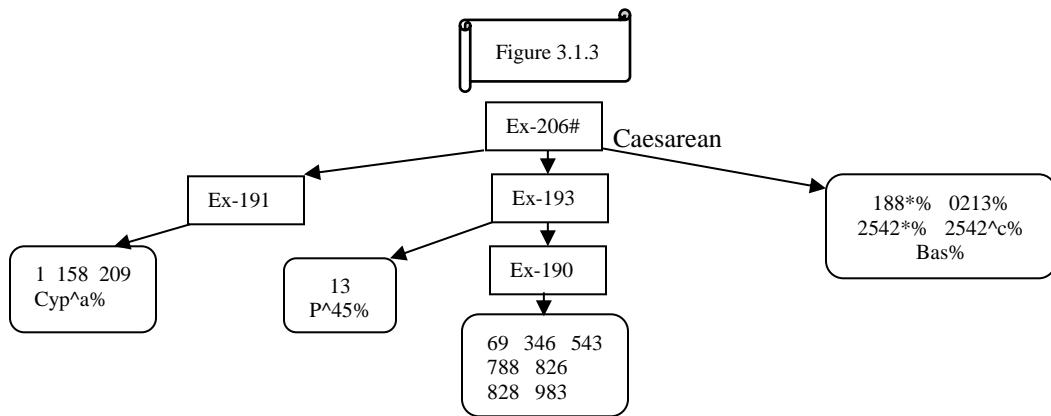

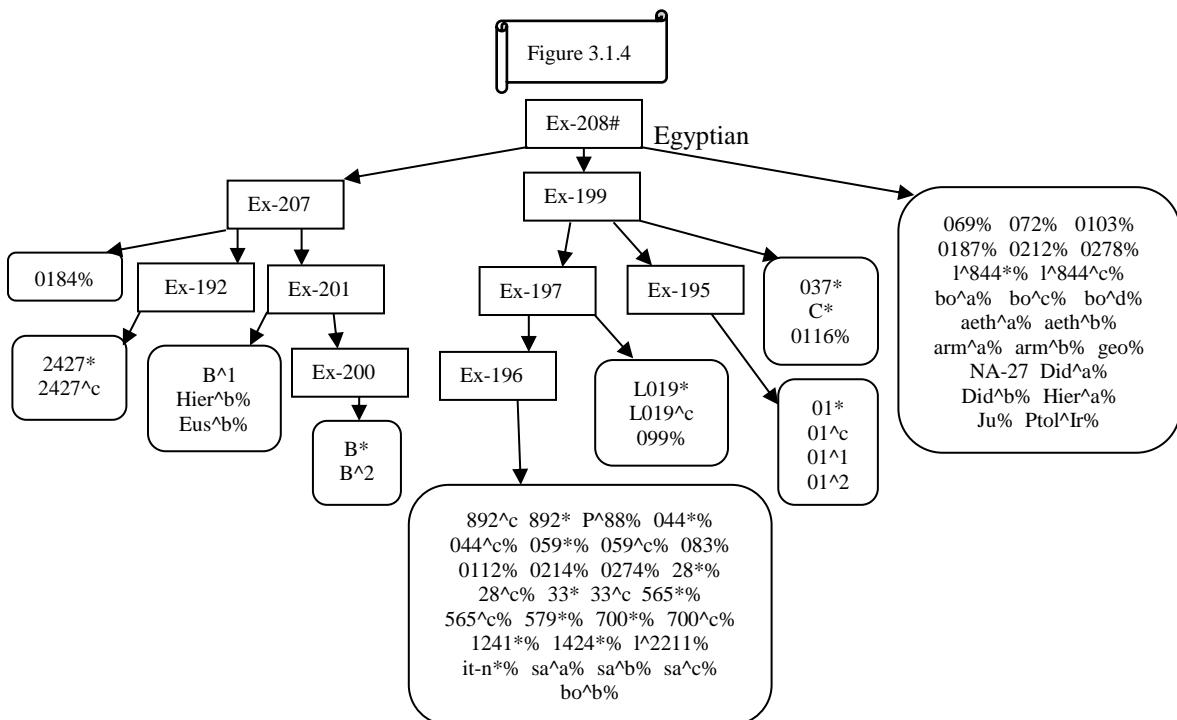

Figure 3.1.4 displays the genealogical history of the Egyptian text tradition which was derived from exemplar Ex-208#, the Egyptian recension. The principal witnesses in this tradition are Codex Sinaiticus (01*) and Codex Vaticanus (B*) together with their respective correctors. This branch extends in genealogical history for five generations. These witnesses occur in different sub-branches which are genealogically related but are never-the-less quite diverse. B* differs from 01* by 317 variants with a mutual affinity of only 70%. Numerous fragmentary witnesses that found their best fit as descendants of the Egyptian recension Ex-208# itself. These consisted of several Greek manuscripts, the Armenian, Ethiopic, and Georgian translations, and several church fathers. The NA-27 text found its best fit as a descendant of that recension.

Condensed Genealogical Stemma-2

Figure 3.2 displays a second tree diagram in its most condensed form in which the principle line of descent from the autograph to the Byzantine text tradition appears in a straight line from which the other text traditions branch off. Only one extant descendant of each exemplar is displayed, usually the most significant one, but every exemplar has at least two descendants as Figure 3.1 indicates. This view best displays the overall structure of the diagram.

This form of the stemma enables one to best see the historical development of the tree, generation by generation, although the dates of the exemplars at the same generation level are not necessarily the same. For example, the date of first-generation exemplar Ex-206# is c. AD 150, while that of first-generation exemplar Ex-205# is c. AD 80, and that of first-generation exemplar Ex-202# is c. AD 250. Whereas, second-generation exemplar Ex-204 is c. AD 100, second-generation exemplar Ex-188 is c. AD 400.

Figure 3.2
Condensed Tree Diagram of Mark

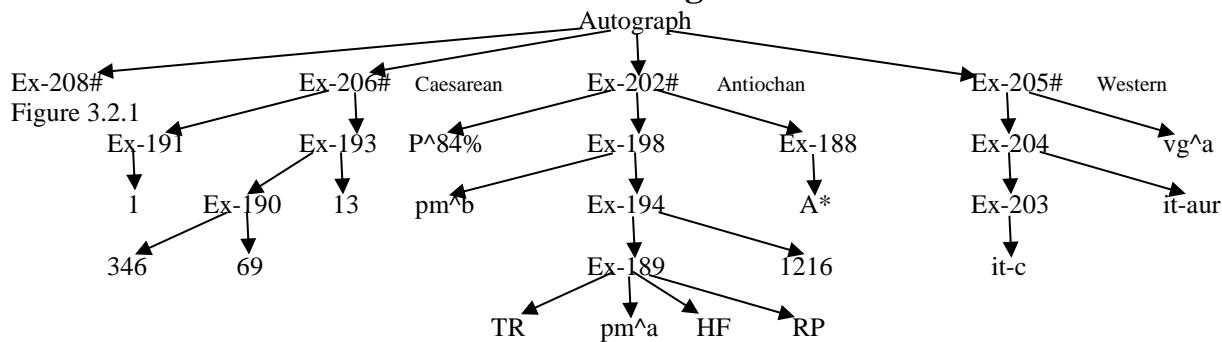

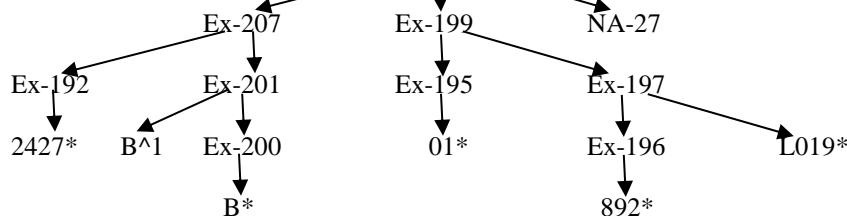

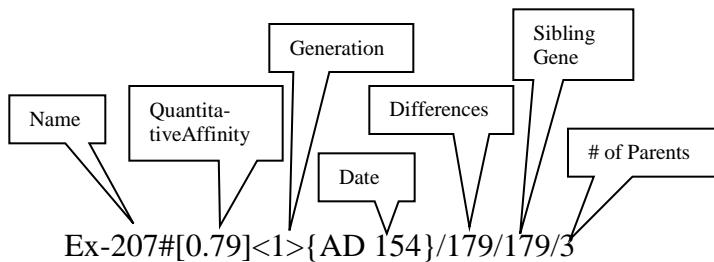

Figure 3.2.1
Ex-208# Egyptian

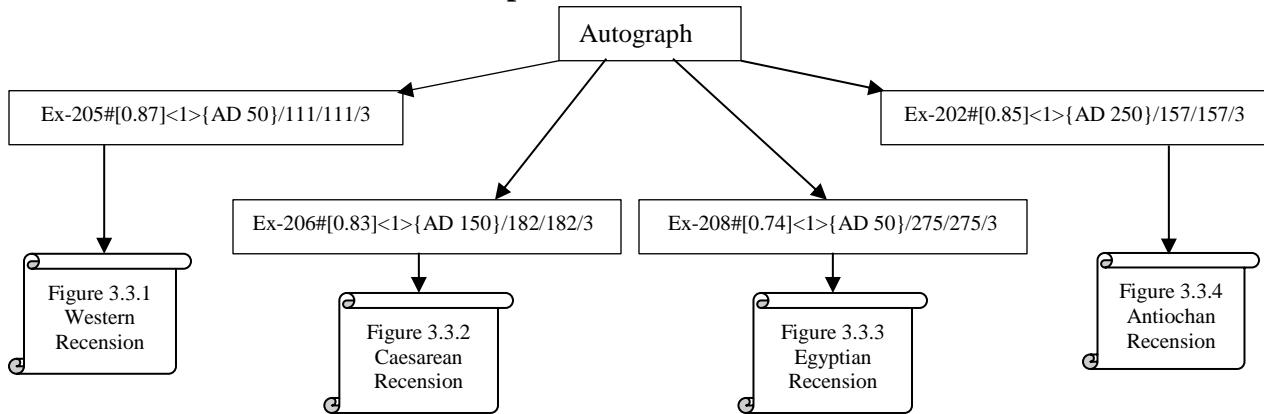

Expanded Genealogical Stemma

Figure 3.3 displays the tree diagram in its fullest form, but because of the limitations of space, it is more cluttered, making the visualization of the historical development of the tree more difficult. It is the same as that found in Appendix D, but arranged vertically rather than horizontally. In addition, the significant information of each witness is provided, such as (1) the name of the witness; (2) the quantitative affinity of the witness with its primary parent exemplar, enclosed in square brackets []; (3) generation from the autograph, enclosed in angular brackets <>; (4) date, enclosed in curly brackets { }; (5) the number of variants the witness differs from its primary parent, enclosed in slant marks //; (6) the number of readings in the sibling gene, also enclosed in slant marks //; and (7) the number of parents the witness has.

The diagram below displays only the distribution of the first-generation exemplars: Ex-205#, the Western recension; Ex-206#, the Caesarean recension; Ex-208#, the Egyptian recension; and Ex-202#, the Antiochan recension.

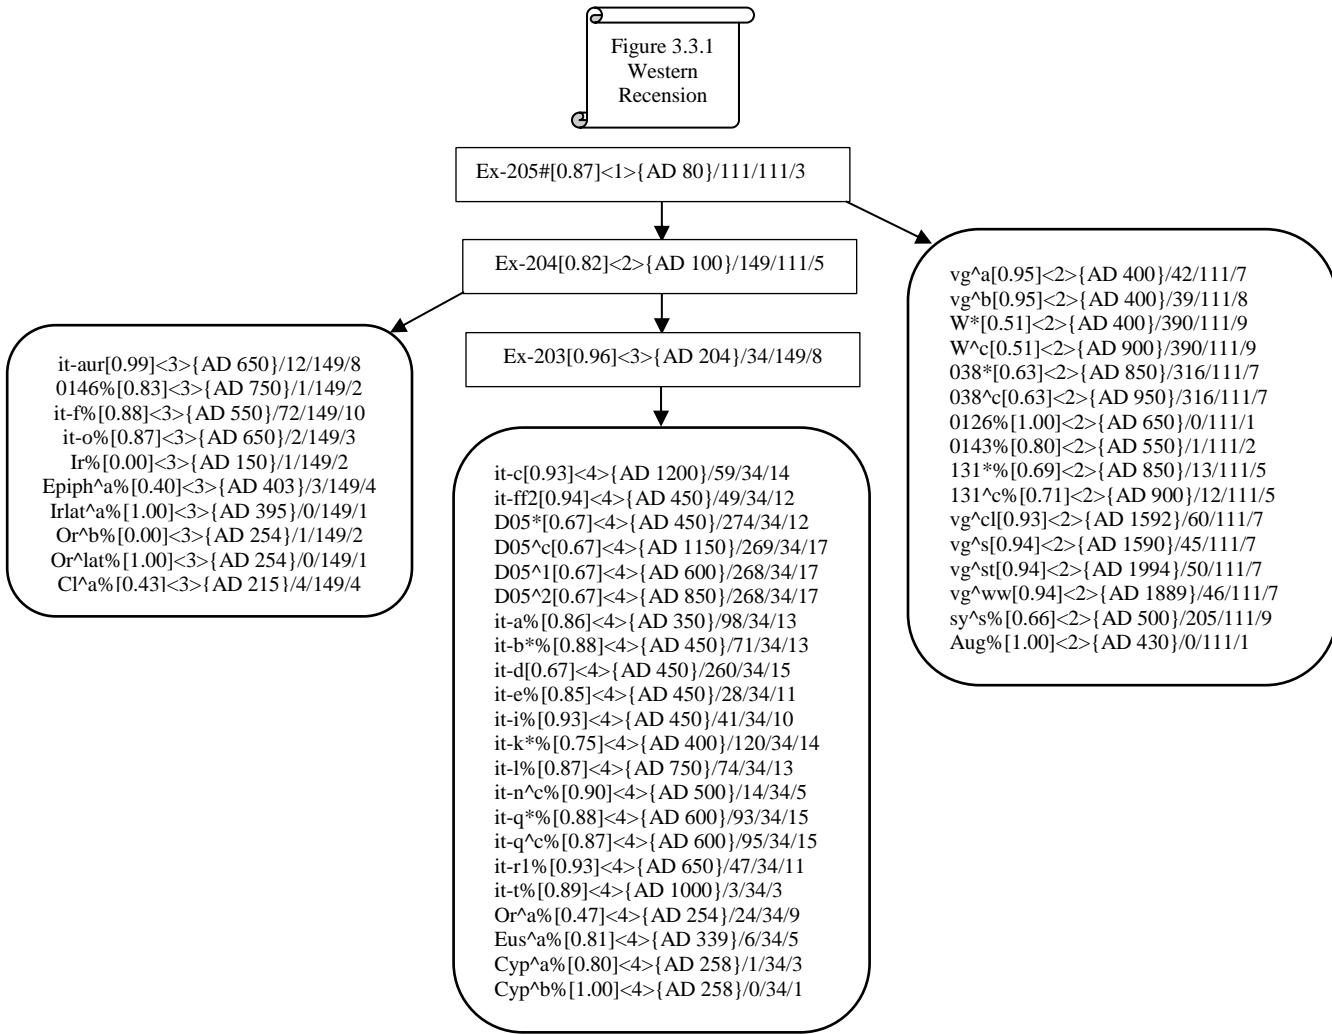

Figure 3.3
Expanded First Generation

On the next pages, each branch is displayed separately, beginning with the Western text tradition. Figure 3.3.1 displays the genealogical history of the witnesses in the Western text tradition headed by exemplar Ex-205#, the Western recension (c. AD 80), the text from which nearly all the Western witnesses were derived. It has an affinity of 87% with the autographic text,

differing by 111 variants, having three parents, the autograph and two virtual parents to account for mixture.

The Western Text Tradition

Its genealogical history was reconstructed with three exemplars spanning four generations ranging from AD 80 to AD 1200, not including the printed editions of the Vulgate. The witnesses of this text tradition are closely related genetically as evidenced by the relatively large number of sibling descendants of the exemplars. The average affinity of the exemplars in this tradition with their parent exemplar is 88.3% with a standard deviation of 3.3. Beginning with its head exemplar Ex-205#, the succeeding exemplars of the main stem accumulated 183 variants, 183 (100%) of which persisted to the third generation. Its date is established by church father Irenaeus (Ir% c. AD 150).

The Caesarean Text Tradition

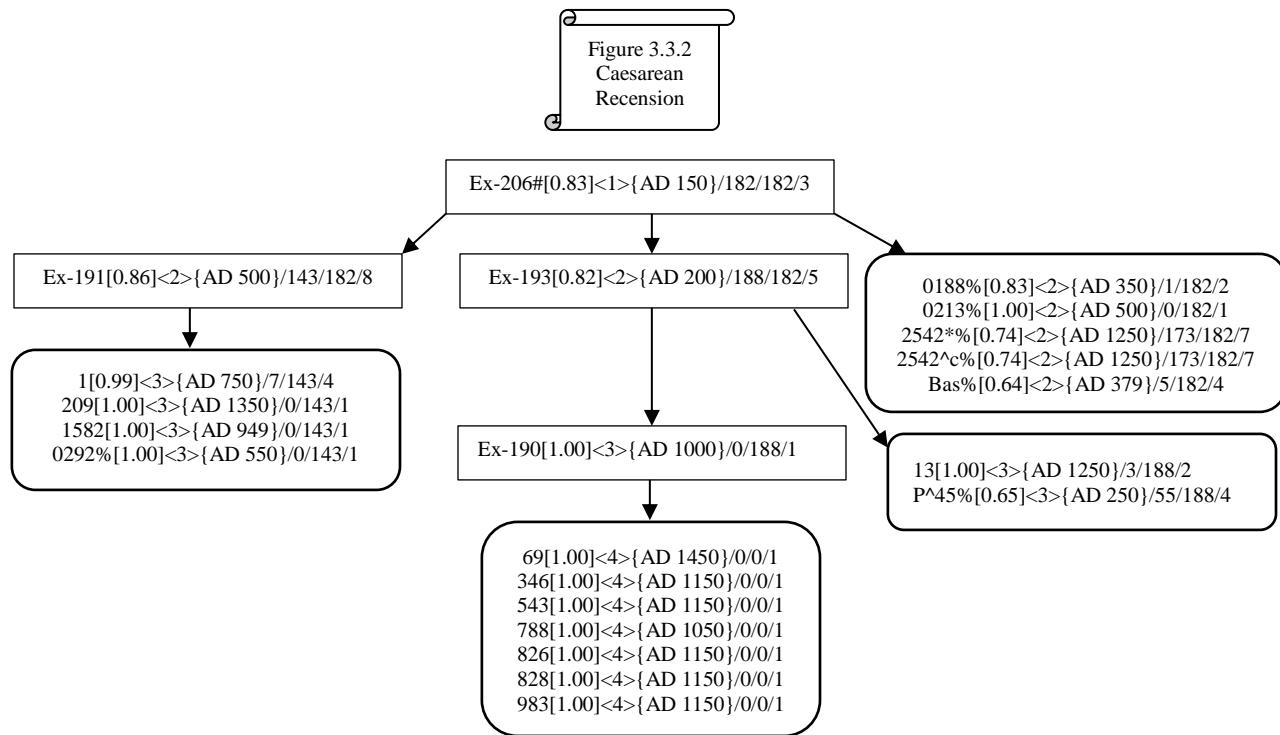

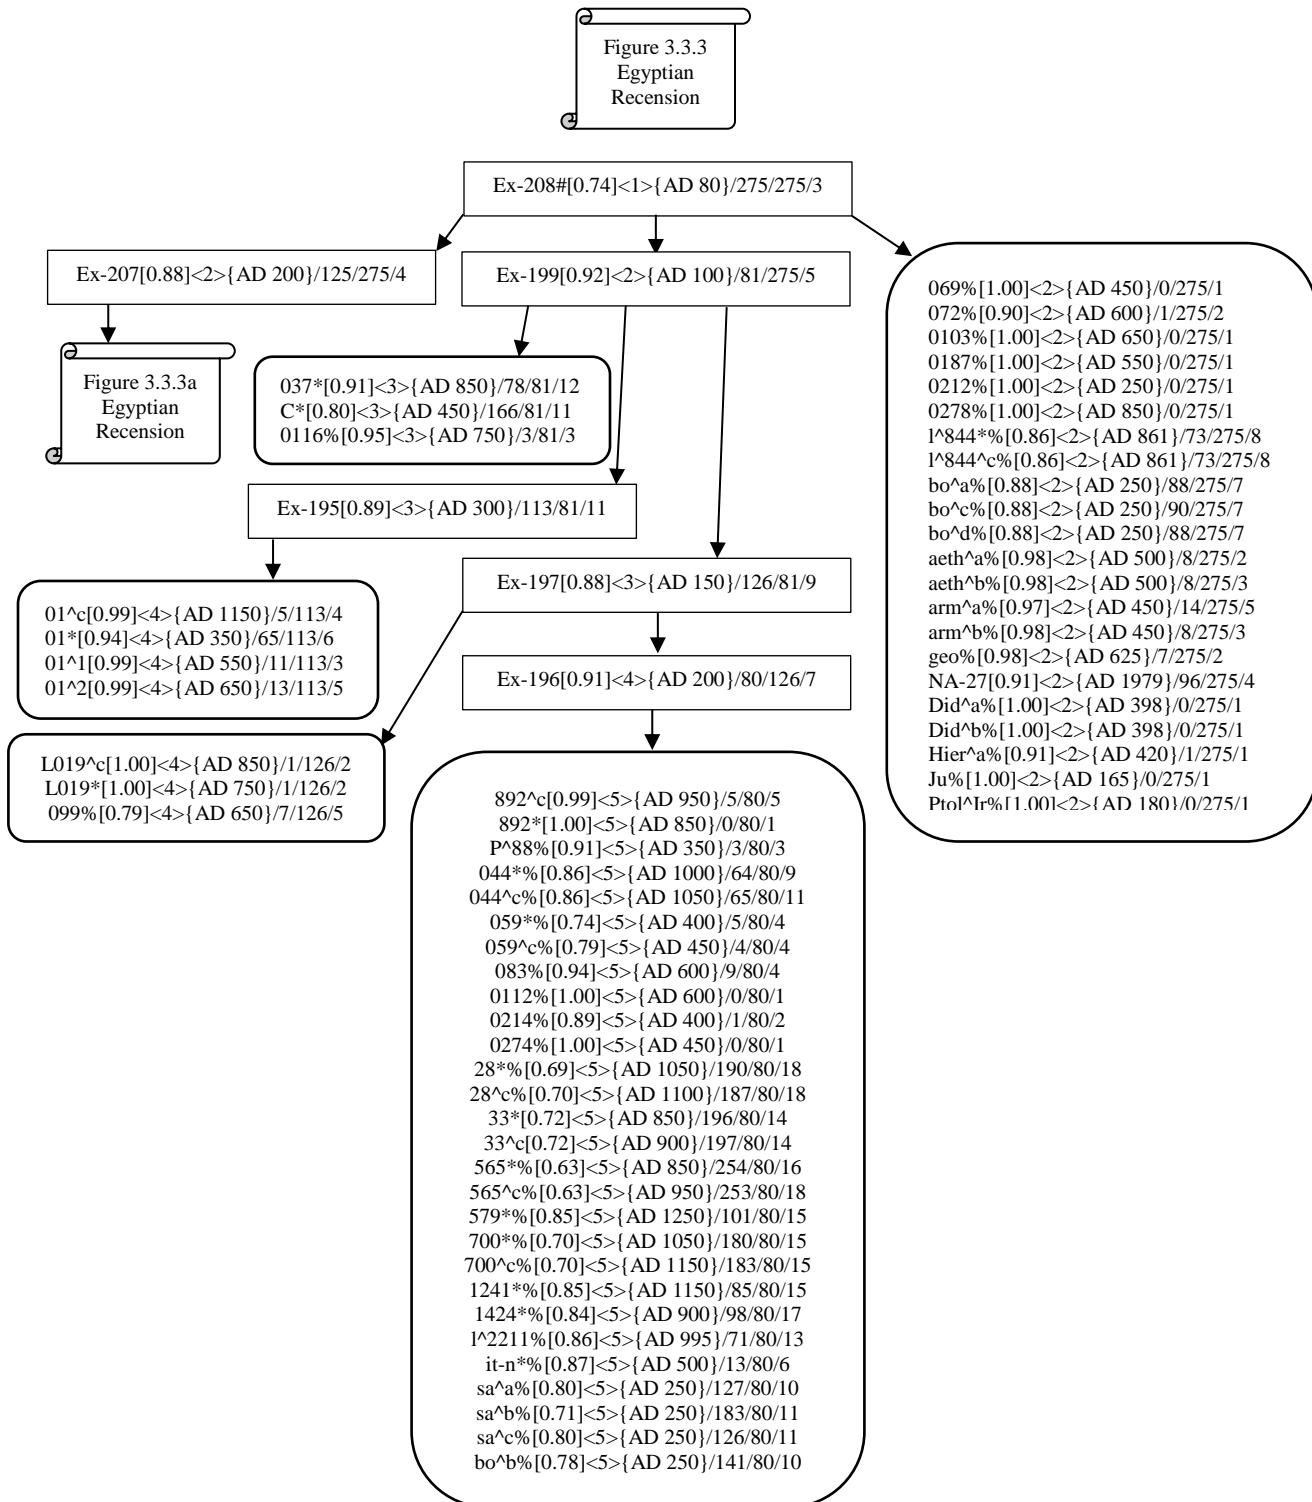

Figure 3.3.2 displays the genealogical history of the witnesses in the Caesarean text tradition headed by exemplar Ex-206#, the Caesarean recension (c. AD 150), the text from which nearly all the Caesarean witnesses were derived. It has an affinity of 83% with the autographic text, differing by 182 variants, having three parents, the autograph and two virtual parents to account for mixture. Its date is established by Papyrus P⁴⁵ (c. 250). The principle witnesses in this tradition are Family 1 and Family 13.

Its genealogical history was reconstructed with four exemplars spanning four generations ranging from AD 150 to AD 1450. The witnesses of this text tradition are closely related genetically as evidenced by the moderately large number of sibling descendants of the exemplars. The average affinity of the exemplars in this tradition with their parent exemplar is 87.75% with a standard deviation of 3.66. Beginning with its head exemplar Ex-206#, the succeeding exemplars of the main stem accumulated 188 variants, 188 (100%) of which persisted to the fourth generation.

The Egyptian Text Tradition

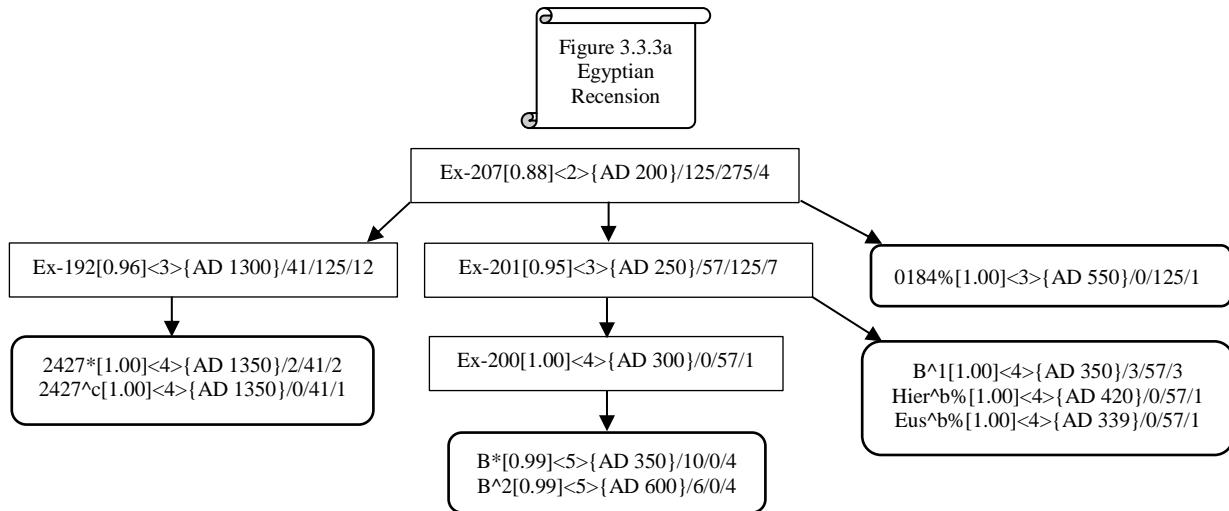

Figure 3.3.3, displays the diagram of the text tradition headed by exemplar Ex-208#, the Egyptian recension (c. AD 80), the text from which nearly all the Egyptian witnesses were derived. It has an affinity of 74% with the text of the autograph, differing from it in 275 places. It has three parents, the autograph and two virtual parents to account for mixture. Its date is established by the fifth-generation Sahidic translation sa^aa% (c. AD 250).

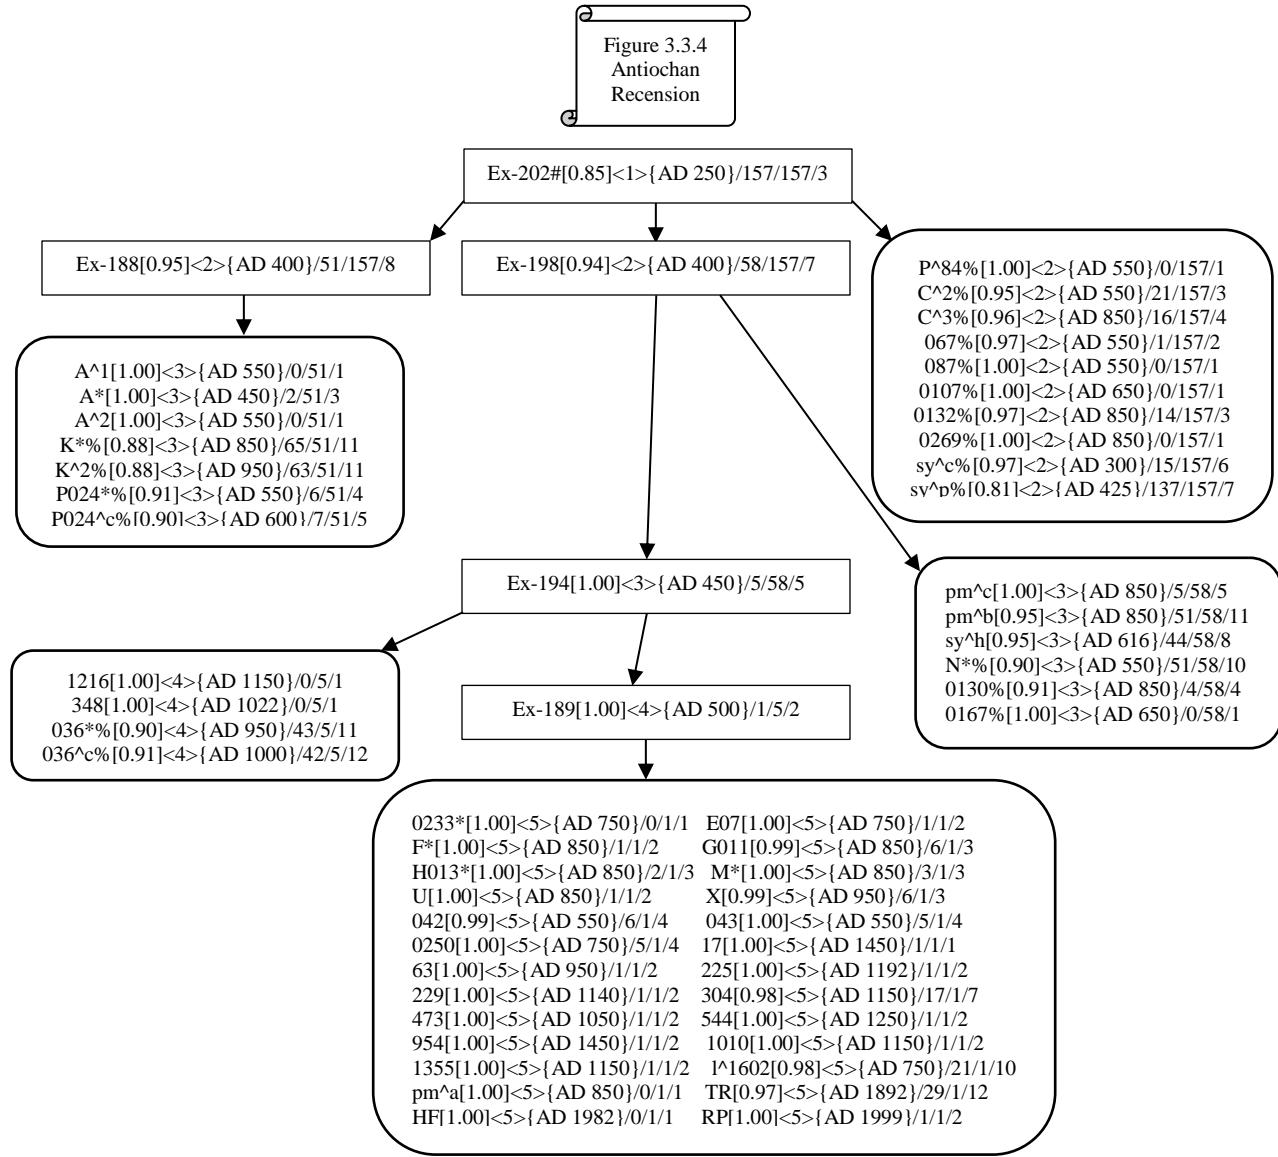

Its genealogical history was reconstructed with nine exemplars spanning five generations ranging from AD 80 to AD 1350. The witnesses of this text tradition are closely related genetically as evidenced by the relatively large number of sibling descendants of the exemplars. The average affinity of the exemplars in this tradition with their parent exemplar is 90.33 % with a standard deviation of 2.47. Beginning with its head exemplar Ex-208#, the succeeding exemplars of the main stem accumulated 287 variants, only 120 (41.8%) of which persisted to the fifth generation.

Several Egyptian versions, and a number of uncial fragments, plus NA-27 are direct descendants of the head exemplar Ex-208#. Second-generation exemplar Ex-195 (c. AD 300) is the source of Codex Sinaiticus (01*) and its correctors. Third-generation exemplar Ex-201 (c. AD 250) is the source of Codex Vaticanus (B*) and its correctors, along with two church fathers. Although Codex Sinaiticus (01*) and Codex Vaticanus (B*) are in the same text tradition, they differ from one another by 317 readings (70%) and from the head exemplar Ex-208# by 213 readings (01*, 80%) and by 191 readings (B*, 82%).

The Antiochan Text Tradition

Figure 3.3.4 displays the branch headed by exemplar Ex-202#, the Antiochan recension, the text from which all the Antiochan witnesses derived their text. Its affinity with the autographic text is 85%; its date is c. AD 250; its text differs from the autographic text in 157 places; and it has three parents: the autograph and two virtual parents to account for mixture. Its genealogical

history was reconstructed with 5 exemplars spanning five generations ranging from c. AD 250 to c. AD 1450. While considerably more cluttered, this view enables the reader to see how strong or weak the genetic forces are that bind the witnesses together.

I call this branch the Antiochan text tradition because it has numerous witnesses that are genealogically earlier than what is commonly regarded as the Byzantine text, which, for Mark, must have originated in the recension of second-generation exemplar Ex-198 (c. AD 400). This is the exemplar to which the Byzantine consensus witnesses pm^ab and pm^ac (c. 850) are descendants. This text tradition lacks any translation witnesses except the Syriac versions.

Excluding the head exemplar Ex-208#, the exemplars in this branch have affinities with their primary parent exemplars ranging from 94% to 100%, with an average of 97.5% with a

standard deviation of 1.31. Beginning with the text of the head exemplar Ex-208#, the head of this branch, the succeeding exemplars accumulate 64 new variants, 62 of which persist to the last generation (96.8%).

Readings of the Autographic Text

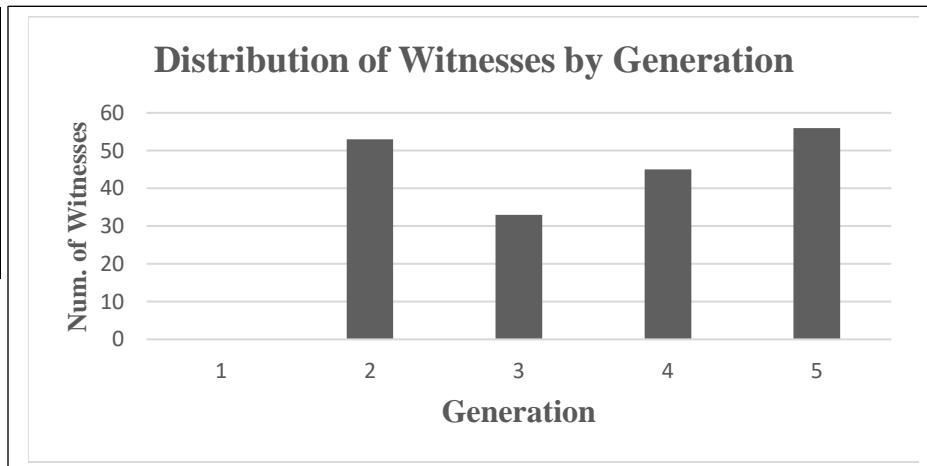

The theory expressed in the first volume of this series⁴ indicates that the readings of the autographic text should be determined on the basis of the “consensus among ancient independent witnesses.” The solution for Mark ended up with four independent recensions which were candidates for being witnesses to the text of the autograph. The guideline given in theory recommended selecting the four most ancient recensions for use in determining the consensus; for Mark they are: Ex-202#, Ex-205#, Ex-206#, and Ex-208#. The text of the autograph is presented in Appendix D.

The Generations of Genealogical History

Program Lachmann-10 reconstructed the genealogical history of the text of Mark in five generations of descent from the autograph. Of course, the exact number of generations cannot be known because the genealogical history before the alleged first-generation major recensions was too fuzzy for the software to accurately reconstruct. The 187 extant witnesses are distributed throughout every generation of the genealogical history. Table 3.1 and its associated graph display the distribution of the extant witnesses of Mark by generation.

Table 3.1

⁴ Chapter Two of The Genealogical History of the Greek Text of the Gospel of Matthew.

Mixture

The number of parents a witness had is a measure of the mixture of its text; the more parents, the more mixture. At any place of variation, the reading of a witness may differ from that of its primary parent exemplar⁵ for one of two reasons: (1) the reading is a newly initiated variant having no prior existence; or (2) the scribe selected the reading from one of the secondary exemplars he was consulting. Witnesses having only one parent experienced no mixture; every variant differing from that of the primary parent exemplar was newly initiated by the scribe either accidentally or intentionally. Table 3.2 displays the distribution of witnesses by number of parents. Those witnesses with the greatest mixture are those with the most diverse text; for example: 51 of the witnesses had only one parent, having no mixture at all; three witnesses have 18: fragments 28*%; 28^c%; 565^c%. Exemplar Ex-192, the source of MS 2427* and its corrector, has 12 parents, indicating the extreme mixture of that tradition; and Ex-197, the source of MS L019* and its corrector, had 9 parents, also indicating extreme mixture. The sources of mixture are not displayed in the tree diagrams.

Primary Daughters

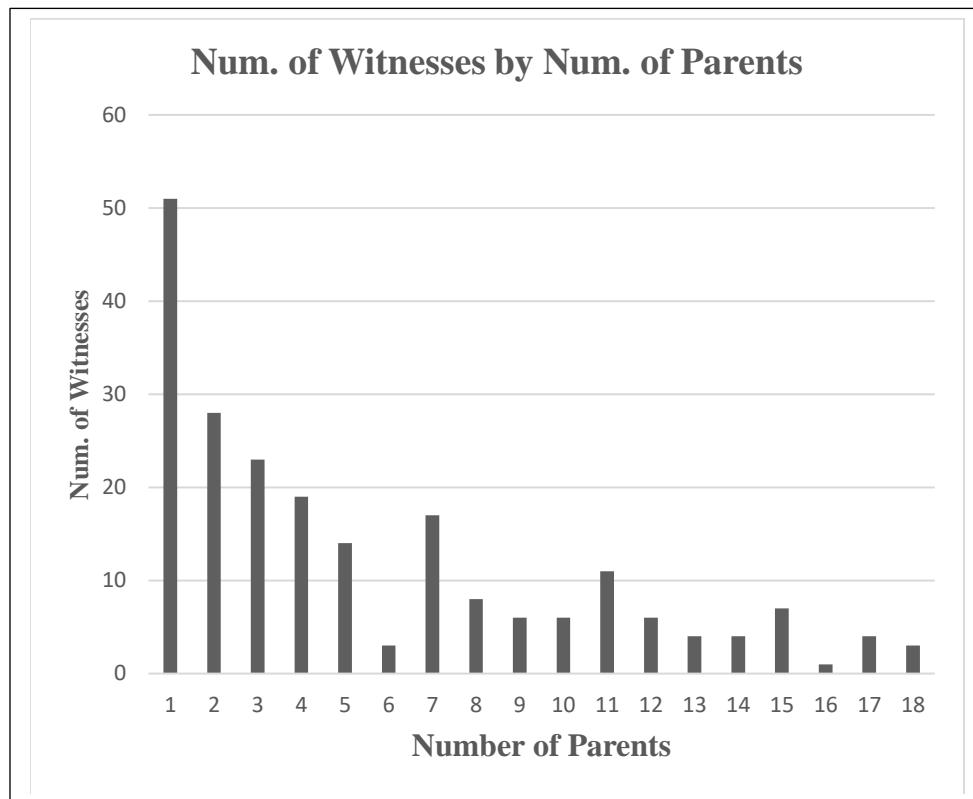

When an exemplar is the primary parent of one of its daughter manuscripts, then that daughter in turn is a primary descendant of the exemplar. Except for exemplars created to account for same-generation mixture (those marked with \$), an exemplar has at least two primary descendants, but it may have as many as needed for grouping multiple sibling daughters. The number of primary daughters of an exemplar is a measure of how well the software was able to find groups of sibling sisters. Table 3.3 displays the distribution of primary daughters by number of exemplars. Twelve exemplars have only two; four exemplars have three primary daughters; Ex-190 has seven; and Ex-189 has 23.

Critics of the genealogical theory protest that the genealogical trees it develops are almost exclusively binary, that is, nodes in the tree have only two branches—in other words, reconstructed exemplars have only two primary daughter descendants. Table 3.3 demonstrates the error of this claim. Exemplars with no primary descendants are those created to account for same-generation mixture; they rightly have no primary descendants.

⁵ A primary parent exemplar is the exemplar from which a witness derives its genealogical descent; secondary parent exemplars are the sources from which a witness acquires mixture. A witness has only one primary parent, but it may have any number of secondary parent exemplars.

Secondary Daughters

When an exemplar is the source of mixture (a secondary parent) for one of its daughter descendants, then that daughter is a secondary descendant of the exemplar. An exemplar does not need to have any secondary descendants, but it may have as many as needed for resolving mixture within its associated branch. The number of secondary descendants of an exemplar is a measure of its value as a source of mixture, suggesting that scribes regarded the exemplar as having some measure of authority. Table 3.4 displays the distribution of secondary daughters by number of exemplars. Exemplar Ex-206#, the Caesarean recension, had 76 secondary daughters; Ex-208#, the Egyptian recension, had 50; Ex-205#, the Western recension, had 45; and Ex-202#, the Antiochan recension, had 55.

Resolution of Mixture

The optimizing procedures of the software resolve all mixture in a genealogical tree, leaving every instance of a variant accounted for either by genealogical descent, by mixture, or by initiation. That is, the software locates the exemplar where every variant originated in the genealogical history of the witnesses.⁶ This feature is treated further in Chapter Four where the genealogical history of the variants is discussed.

Distribution of Affinity

Another measure of the success of the software in reconstructing the genealogical history of the text of Mark is the distribution of the affinity of the witnesses to their primary parent exemplars. If this affinity is consistently high, the success may be regarded as high. Table 3.5 and its associated graph display the distribution of the affinity of the extant witnesses⁷ to their corresponding primary parent exemplar. The evidence from Table 3.5 indicates that all but two extant witnesses had a strong affinity (> 90%) with their primary parent exemplar, and all but one had an

⁶ While this is true for the book of Mark, for some of the other books the software may fail to uniquely identify the place of origin for a small percentage of variants.

⁷ Witnesses with less than 75% content are excluded because they do not contribute to the reconstruction of the genealogical history but are attached at the most appropriate place after the tree is complete.

affinity greater than 85%. This demonstrates that considerable close grouping exists among the extant witnesses.

Table 3.5

Total	61

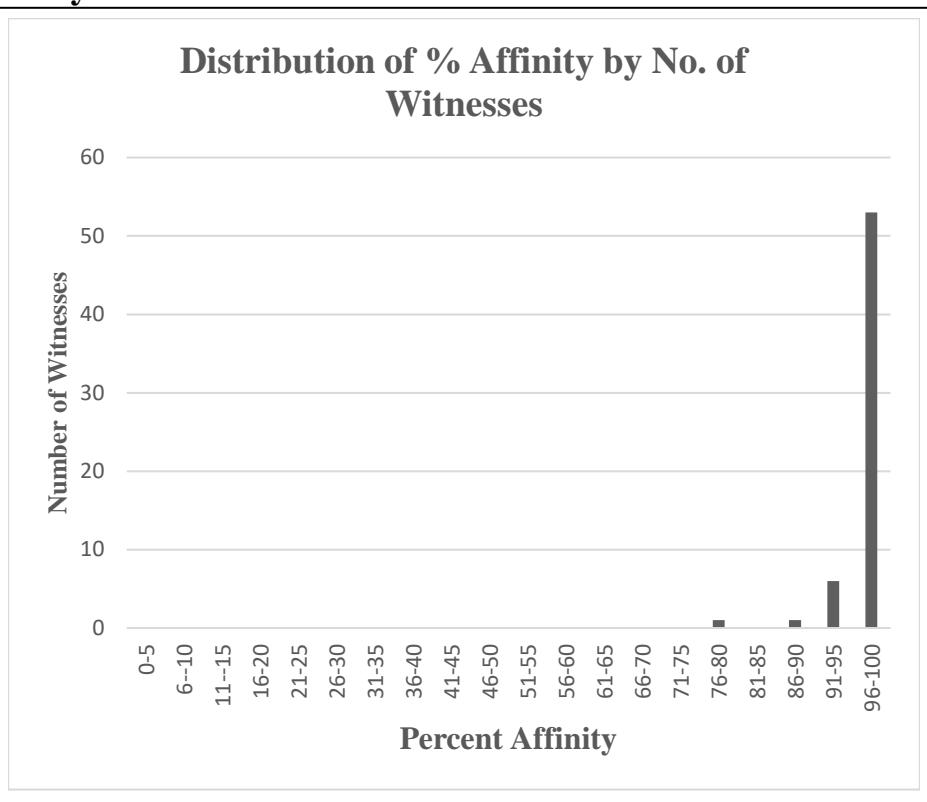

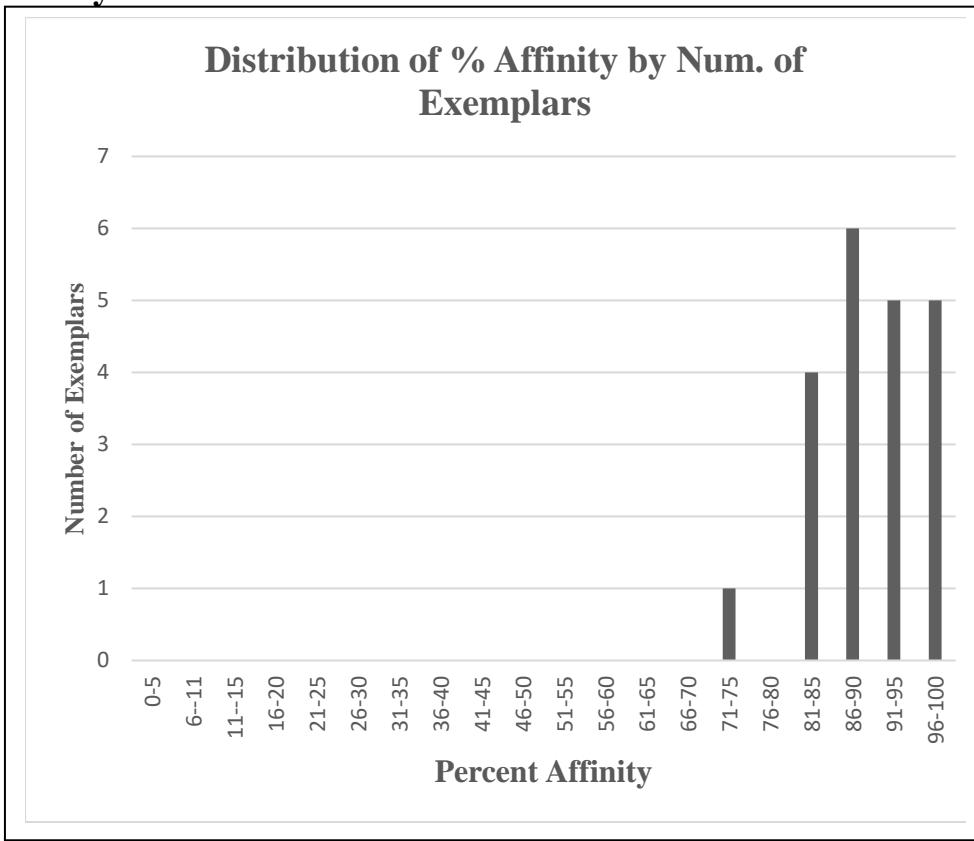

Table 3.6 and its associated graph display the distribution of the affinity of the reconstructed exemplars to their corresponding primary parent exemplar, not including those functioning only to resolve same-generation mixture.⁸ The evidence from Table 3.6 indicates that 10 (47.6%) of the 21 reconstructed exemplars⁹ have a strong affinity (> 90%) with their primary parent exemplar, and another 10 (47.6%) had a moderate affinity (81-90%) with their parent; only one (4.8%) have a weak affinity (71-80%). The one exemplar with an affinity less than 80% is: Exemplar Ex-208# (74%), the head of the Egyptian text tradition.

⁸ Such exemplars do not contribute to the reconstruction of the tree diagram of the genealogical history of the witnesses, their affinity with their parent exemplar having no significance to the reconstruction process.

⁹ The exemplars constructed just to account for same-generation mixture were not included in the study because they do not contribute to the construction of the genealogical tree.

Table 3.6
Distribution of Affinity of
Exemplars with Primary Parent

% Affinity	No. of Exemplars

86-90	6
91-95	5
96-100	5
Total	21

The presence of weak affinities is troubling because it questions the reality of any actual genealogical relationships. But the corresponding presence of sizeable sibling genes confirms that the given witness has a common ancestry with its alleged sisters, even though the relationship may be one of distant cousins; whatever the actual relationship may have been, within the collection of witnesses the relationship is the closest possible.

Global Inheritance Persistence

Another measure of the success of the software in reconstructing the genealogical history of the text of Mark is the persistence of the variants once they are initiated in the stemma of genealogical history. Ideally, once a variant is initiated, it will persist in all the descendants of the exemplar in which it was initiated. Table 3.7 presents the global statistics for inheritance persistence for the reconstructed stemma of Mark. The information is the accumulated sum of every

witness' hereditary persistence. For each witness, the total number of variants it could inherit from all its ancestors was counted, also the number of those inheritable variants it actually inherited.¹⁰

Table 3.7
Global Inheritance Persistence

Global Total Number of Inheritable Variants: ¹¹	25,230
Global Number of Actually Inherited Variants: ¹²	23,777
Global Number of Changed Variants: ¹³	614
Global Number of Corrected Variants: ¹⁴	839

This information indicates that for the 25,230 variants (the inheritable ones) initiated in all the ancestor exemplars in the stemma, 23,777 were persistent, being actually inherited by all their respective descendants (94.2%), and 614 were changed (2.4%) somewhere in intervening ancestors. Interestingly, 879 of them (3.5%) were corrected back to the reading of the exemplar in which the variant originated. This information indicates the solution may be regarded as reasonably successful. The persistence of variant readings may be observed in the trees tracing the genealogical history of specific variants found in Chapter four.

Date of the Autograph

The dates of the autograph and all other exemplars are relative, not exact, being created by the date algorithm of the software which states that a parent exemplar is 50 years older than that of its oldest sibling daughter. When the dates diminish to below AD 150, the generation gap is reduced to 20 years, giving more room for activity in the first half of the second century and earlier. When the dates diminish below AD 100, the generation gap is reduced to five years. When the date diminishes below AD 50, the generation gap is reduced to one year. The date of the autograph (c. AD 75) is traced down through the Egyptian text tradition to fifth-generation fragmentary Sahidic translation (sa^a% AD 250) through the following exemplars:

¹⁰ The hereditary persistence of a witness is the ratio of the number of inheritable variants to the number of actually inherited ones. The number of inheritable variants of a witness is the sum of the number of new variants initiated in all of its ancestor exemplars.

¹¹ An inheritable variant of a witness is one of its readings that was initiated in one of its ancestral exemplars.

¹² An inherited variant of a witness is one of its inheritable readings that persisted unaltered from its point of initiation through its intervening ancestors to the given witness itself.

¹³ An inheritable variant of a witness is counted as changed if it was altered in an intervening ancestral exemplar, disrupting its hereditary persistence.

¹⁴ An inheritable variant of a witness is counted as corrected if after being altered it is restored again to its initial reading.

```

Autograph[0.00]<0>{AD 75}/0/0/0
|-Ex-208#[0.74]<1>{AD 80}/275/275/3
|-Ex-199[0.92]<2>{AD 100}/81/275/5
|-Ex-197[0.88]<3>{AD 150}/126/81/9
|-Ex-196[0.91]<4>{AD 200}/80/126/7
|-sa^a%[0.80]<5>{AD 250}/127/80/10

```

The Sahidic translation (sa^a% AD 250) has 722 readings, having 80% affinity with its parent exemplar. This is a reasonable basis for establishing the date of the autographic text.

Summary

Beginning with 187 extant witnesses, 81 of which were 75% or more complete, Lachmann-10 reconstructed 22 exemplars to account for the genealogical relationships among them. It constructed a stemma that mapped the genealogical history of the text of Mark consisting of four main branches corresponding to the four traditional text types. Table 6.7 summarizes the following data for each branch:

- (1) The name of the first-generation recension
- (2) The date of the recension
- (3) The date of the latest witness in the branch, a measure of the text tradition's longevity
- (4) The affinity of the recension with the autographic text
- (5) The number of variants the recension differs from the autographic text
- (6) The number of exemplars created for the branch
- (7) The number of generations occurring in the branch
- (8) Standard deviation of the witnesses in the branch with their parent exemplar¹⁵
- (9) Consistency of the witnesses in the branch with their parent exemplar¹⁶
- (10) The number of accumulated variations within the branch
- (11) Percent of persistence of variants within the branch

¹⁵Standard deviation here is an overall measure of how deviant the exemplars were from their immediate parent exemplar within the branch. It is the root mean square of the deviation of all the exemplars in the branch.

¹⁶Consistency here is the average affinity of the exemplars with their parent exemplar.

Table 6.7
Summary of Data

	Egyptian	Antiochan	Caesarean	Western
Recension	Ex-208#	Ex-202#	Ex-206#	Ex-205#
Date	AD 80	AD 250	AD 150	AD 80
Latest	AD 1350	AD 1450	AD 1450	AD 1200
Affinity	74%	85%	83%	87%
Difference	275	157	182	111
Exemplars	9	5	4	3
Generations	5	5	4	4
St. Deviation	2.45	1.31	3.66	3.3
Consistency	90.3%	97.5%	87.7%	83.3%
Accumulated	287	64	188	1
Persistence	41.8%	96.8%	100%	100%

The names of the exemplars consist of an “Ex-” plus a number indicating the sequential order in which they were created. There are 187 extant witnesses for Matthew in this study, so the numbering of the exemplars began with Ex-188 and continues sequentially to Ex-208#, the last one created, increasing by one with each iteration. Table 6.8 displays how the exemplars of the four branches align sequentially with the dates of history; it also shows the date of the most recent witness in each branch; and also how the creation of the exemplars aligns with history.

Table 6.8

AD 400		Ex-188<2> Ex-198<2>		
AD 450		Ex-194<3>		
AD 500		Ex-189<4>	Ex-191<2>	
AD 1000			Ex-190<3>	
AD 1300	Ex-192<3>			

One may notice that some exemplars appear out of order generationally; for example third-generation Egyptian Ex-192<3>, dated AD 1300, appears later in time than fourth-generation exemplar Ex-200<4> (AD 300). One expects the generations of a branch to be sequential in time.

However, this misalignment occurs because exemplar Ex-192, dated fifty years earlier than its oldest daughter MS 2427* (AD 1350), is a descendant of second-generation exemplar Ex-207 (AD 200) and may actually have been copied any time subsequent to AD 200. This is an example of a group of late witnesses having been copied from a much earlier source.

Conclusions

The software does indeed reconstruct a genealogical history of the manuscripts of the Gospel of Mark, and of the other books of the New Testament as well. However, the results are not what was anticipated, based on earlier experiments with smaller books, smaller databases, and less sophisticated programs. I anticipated that the commonly accepted text traditions would emerge as independent witnesses to the autograph. Those text traditions did emerge, but they turned out to be not exactly Western, Alexandrian, Caesarean, and Byzantine, but rather Western, Egyptian, Caesarean, and Antiochan, with Byzantine being a later form of the Antiochan text tradition. Furthermore, The Egyptian witnesses did not form one uniform tradition but rather two somewhat diverse independent branches. Codex Sinaiticus (01*) and Codex Vaticanus (B*) emerged as relatively independent of each other and only loosely related to the other Egyptian witnesses.

This concludes the discussion of the genealogical history of the witnesses to Mark. While the reconstruction of the genealogical history of witnesses depends on the quantitative affinity (consensus), genetic affinity (sibling genes), and the date of the witnesses, the genealogical history of variant readings depends on the consensus and inheritance of variants. The history of the variant readings of the text of Mark is discussed in Chapter Four.

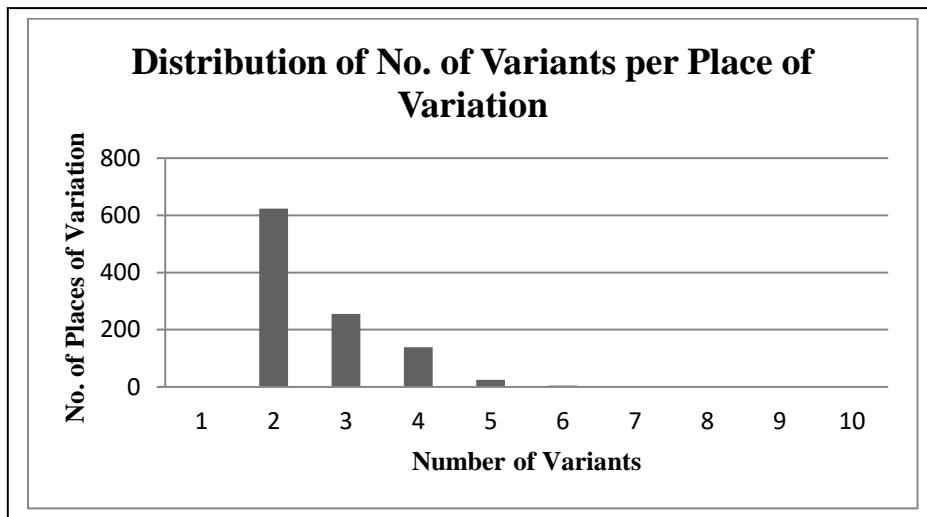

CHAPTER 4

THE HISTORY OF THE TEXTUAL VARIANTS IN MARK

Chapter Three presents the genealogical history of the manuscripts¹ of the Greek text of the Gospel of Mark. That history is necessary before the genealogical history of an individual variant may be safely discussed, because the history of a textual variant is totally dependent upon the history of the manuscripts in which it occurs. The NA-27 Greek New Testament records 1,048 places of textual variation in the book of Mark and 2,726 variant readings. This averages out to a variableness index of 2.60 variants per place of variation—a relatively low value. Table 4.1 and its associated graph display the distribution of the number of variants per place of variation.

Table 4.1
Distribution of Number of
Variants per Place of
Variation

Number of variants	Number of Places of Variation
1	0
2	624
3	256
4	137
5	25
6	5
7	1
8	0
9	0
10	0
Total=	2728

¹ Again the term *manuscript* is used in its broader sense to include manuscripts, translations, quotations from church fathers, and reconstructed exemplars.

Initially the number 1,048 seems large when considering textual variations in a book of the Bible, but this number must be considered with respect to the total number of places where variation could occur. If the number of words in the Greek text of Mark (11,949) is regarded as the number of places where variation could occur, and each variation is regarded as the equivalent of one word, then the text of Mark is 91.2% pure² before variations are even considered. Thus variation occurs in only 8.8% of the text. In that small portion of the text 2,728 variants are recorded, but 1,048 of them are original readings, so only 1,680 are real variants. While this still seems like a large number, the genealogical software clearly identified all of them as non-original.

Types of Variants

Four basic types of textual variations occur in the text of Mark: (1) omissions, (2) alterations, (3) transpositions, and (4) additions. Table 4.2 lists the distribution of these types of variants in the 1,048 places of variation in the text of the Gospel of Mark, and Table 4.3 lists their distribution with respect to all variations.

Table 4.2
Distribution of Variants by Type

Variation type	Number of Variants
Omit a word	113
Omit a phrase	84
Alternate word	320
Alternate words	322
Transposed words	28
Added word or phrase	181
Total	1,428

Table 4.3
Distribution of All Variants by Type

Variation Type	Number of Variants
Omit a word	228
Omit a phrase	168
Alternate word	847
Alternate words	1,017
Transposed words	63
Added word or phrase	403
Total	2,726

² $((11,949 - 1048) \div 11,949) \times 100 = 91.2$.

Determining Exemplar Readings

Whenever the genealogical software creates a new exemplar as the parent of a group of sibling sister witnesses, at each place of variation, the reading of the exemplar is decided on the basis of four ordered rules:

- (1) Majority consensus among all the immediate sibling children;
- (2) if no majority, then postpone the decision until a sibling emerges for the exemplar currently being reconstructed, that sibling will have the inherited reading;³
- (3) if, in the case of deciding the readings of the autograph, majority consensus fails, then accept the first variant (the NA-27 reading) if it is an option;
- (4) if the first variant is not an option, then by default arbitrarily select the smallest variant number that is an option;⁴
- (5) if witnesses are of different languages, then select the Greek reading.

Table 4.4 lists the number of times each of the above rules was used in the process of constructing the genealogical history of the text of Mark.

Table 4.4
Frequency of Exemplar Reading Rules

(1) by greatest probability	20,937
(2) by deferred ambiguity	924
(4) by default to NA-27	283
(5) by arbitrary choice	8
(6) by language deference	81
Total	22,233

The evidence indicates that the vast majority of exemplar readings (94.17%) were determined by “consensus among independent witnesses,” and nearly all the remainder (4.15%) were determined by deferred ambiguity, while only 1.27% were deferred to the NA-27 reading, and 0.41% were determined by arbitrary choice or language preference.

³ I call this practice *deferred ambiguity*. Since sibling witnesses rarely have scribal errors at the same place of variation, where the reading of one sibling is ambiguous—that is, it is uncertain which of two readings is the inherited reading and which is a newly initiated error—the other siblings will have the inherited reading. Of the 79,298 decisions the software made, only 203 had more than two alternatives.

⁴ Next to the first variant—the NA-27 choice—the reading with the smaller variant number is usually supported by more witnesses than those with larger variant numbers. While this option is purely arbitrary, it turns out to be rarely significant for determining the readings of the autograph. For determining the readings of the autograph the algorithm treats the exemplars of the last four branches to be constructed as siblings constituting the ancient independent witnesses.

Autographic Readings

The readings of the autographic text of Mark were determined on the basis of consensus among the four most ancient independent recensions: (1) Exemplar Ex-205#, the Western recension; (2) Exemplar Ex-206#, the Caesarean recension; (3) Exemplar Ex-208#, the Egyptian recension; and (4) Exemplar Ex-202#, the Antiochan recension. Appendix D lists each of the 1,048 readings of the autograph together with its place of variation, the chapter and verse where it occurs, the reading of the text at that place, and the probability that the reading is original. Those readings lacking consensus were determined by default to the decision of the NA-27 editors' evaluation of internal evidence if that reading was among the available alternatives; otherwise, the next lowest variant number was selected by arbitrary choice. Table 4.5 lists the number of times each of the above rules was used in the process of determining the autographic readings of the text of Mark. Again the evidence indicates that 97.42% of the readings were determined by "consensus among ancient independent witnesses"; only 2.48% were determined by language deference; and only one was determined by defence to NA-27 or arbitrary choice.

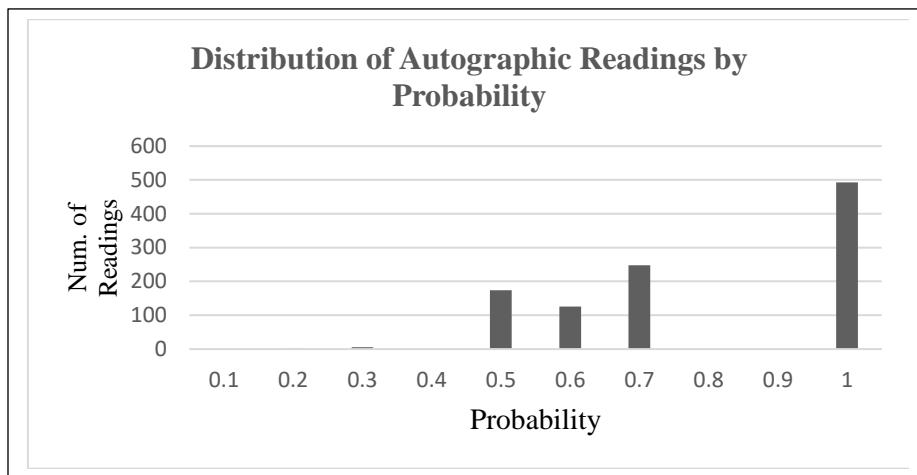

Table 4.5
Frequency of Exemplar Reading Rules

Number of Autographic variants decided by greatest probability	1021	97.42%
Number of Autographic variants decided by Choice of NA27	1	0.10%
Number of Autographic variants decided by arbitrary choice	0	0.00%
Number of Autographic variants decided by Language deference	26	2.48%
Total	1,048	

Table 4.6 and its associated graph displays the distribution of the probability of the reconstructed autographic readings. Of the 1,048 readings, 507 had a probability of 1.0 (100%), 235 had a probability of 0.75 (75%), 123 had a probability of 0.66 (66%), 176 had a probability of 0.5 (50%), 6 had a probability of 0.33 (33%), and one had a probability of 0.25 (25%).

Table 4.6
Distribution of Autographic Readings by Probability

Probability	Number of Readings
0.1	0
0.2	1
0.33	6
0.4	0
0.5	176
0.66	123

0.9	0
1.0	507

Agreement with NA-27

In the database used in this work, the first variant at any place of variation is the reading of the NA-27 text. The second and subsequent variants are the alternate readings listed in the NA-27 database. Table 4.7 lists how often the various alternate readings were found to be original. The evidence indicates that the autographic text reconstructed by the genealogical software agrees with the text of NA-27 733 times or 69.94% of the time, and differs from the NA-27 text 315 times or 30.06% of the time. Appendix E lists the 315 places where the Lachmann-10 text differs from that of NA-27.

Variant 7	0
Total	1048

The Origin of the Variants

The software identifies the place of origin of every variant in the genealogical tree, accounting for every instance of a variant as being the result of genealogical descent, mixture, or initiation—that is, the software finds the one and only exemplar or extant witness in the genea-

logical history where each variant originated.⁵ Often, after the first initiation of a reading, it may have been introduced again in a later exemplar by means of mixture.

Exemplars Ex-210\$ through Ex-216\$, are children of the Autograph created by the software as sources for resolving same-generation mixture between the branches headed by the first-generation recensions, that is, for non-autographic readings that occur in more than one primary branch of the genealogical tree. These exemplars serve as virtual exemplars lost in the unrecoverable genealogical history between the Autograph and the assumed first-generation recensions. Of the 1,680 non-autographic variants, 1,234 are listed as originating in one of these virtual exemplars. Two possibilities exist for each of these variants: either it really originated only once in the earliest decades of unrecoverable history, or it originated independently in two or more major branches of the tree diagram of genealogical history; the latter case can be true for commonly occurring scribal errors, but not for the uncommon ones. Variants of the first kind are weakly distributed among the branches of the first-generation recensions and are of little genealogical significance individually; their distribution among the three most ancient recensions is weaker than that of their corresponding autographic reading.

Egyptian Recension

First-generation exemplar Ex-208# was the ancestral forefather of the Egyptian text tradition. This recension differs from the autograph by 275 variants⁶ among which it uniquely

⁵ The place a variant reading was initially introduced in genealogical history is determined by locating the witness containing the variant reading where the reading differs from that of its parent exemplar and the reading is not accounted for by mixture. Mixture fails when the reading does not occur in any witness in preceding generations.

⁶ In this and other lists of variants herein, an exemplar enclosed in square brackets [] is the source of mixture for the associated variant. Variants are listed only by their reference: 1:1,2.1; 1:4,1.1; 1:8,2.2; 1:14,2.1[Ex-215\$]; 1:16,1.1; 1:16,2.1[Ex-215\$]; 1:23,1.1[Ex-215\$]; 1:26,2.1; 1:27,1.2; 1:27,2.1[Ex-215\$]; 1:28,1.1; 1:28,2.1[Ex-216\$]; 1:31,2.1; 1:31,3.1[Ex-215\$]; 1:36,2.1; 1:37,2.1; 1:38,2.1[Ex-215\$]; 1:39,1.1; 1:39,2.1; 1:41,3.1; 1:42,1.1[Ex-215\$]; 2:1,1.1; 2:3,1.1; 2:5,1.1[Ex-215\$]; 2:12,1.1; 2:12,3.1; 2:15,2.3; 2:15,6.1; 2:18,2.1; 2:25,1.1; 3:3,1.1; 3:6,1.1; 3:7,2.1[Ex-216\$]; 3:7,5.1; 3:11,3.4; 3:14,2.1[Ex-215\$]; 3:15,2.1[Ex-215\$]; 3:16,1.1; 3:19,1.1; 3:25,1.1[Ex-215\$]; 3:26,1.1; 3:26,2.1; 3:27,1.1[Ex-215\$]; 3:27,2.1; 3:29,3.1; 3:31,3.1[Ex-215\$]; 4:1,1.1; 4:1,3.1; 4:8,1.1; 4:8,2.1[Ex-215\$]; 4:8,3.4; 4:12,2.1[Ex-215\$]; 4:15,1.1[Ex-215\$]; 4:22,1.1[Ex-215\$]; 4:30,1.1; 4:31,1.1; 4:38,1.1; 4:41,1.1; 5:6,1.2; 5:9,2.1; 5:10,1.1; 5:13,1.1[Ex-215\$]; 5:19,2.1; 5:27,1.2[Ex-215\$]; 5:33,2.1; 5:36,1.1; 5:37,1.1; 5:37,2.1; 5:40,1.1; 5:40,2.1; 5:41,1.1[Ex-215\$]; 5:42,1.1; 6:1,1.1; 6:2,1.1; 6:2,3.1; 6:2,4.1; 6:3,2.1[Ex-215\$]; 6:11,1.1[Ex-215\$]; 6:12,1.1; 6:14,3.1; 6:16,1.1; 6:20,1.1; 6:22,2.1; 6:22,3.2; 6:23,2.1[Ex-215\$]; 6:24,2.1; 6:26,1.1; 6:26,2.1[Ex-215\$]; 6:27,1.1[Ex-215\$]; 6:34,1.1; 6:35,2.1; 6:38,1.2; 6:38,2.1[Ex-215\$]; 6:39,1.2[Ex-215\$]; 6:40,2.1; 6:40,3.1; 6:41,4.2; 6:41,5.1; 6:43,1.1[Ex-215\$]; 6:48,3.1; 6:49,1.1; 6:49,3.1; 6:51,1.2; 6:52,1.1; 6:56,3.1; 7:2,1.1; 7:2,2.1; 7:4,3.2[Ex-215\$]; 7:5,2.1[Ex-215\$]; 7:6,1.1; 7:6,2.1; 7:6,3.1; 7:8,2.1[Ex-215\$]; 7:8,4.1[Ex-215\$]; 7:12,1.1[Ex-215\$]; 7:15,1.1; 7:15,2.1; 7:21,1.1; 7:24,1.1; 7:25,1.1; 7:28,1.2[Ex-215\$]; 7:30,2.1; 7:35,1.2[Ex-215\$]; 7:37,2.2; 8:3,1.2; 8:5,1.1; 8:7,2.1; 8:9,1.1; 8:13,1.1; 8:17,1.1[Ex-215\$]; 8:17,3.1[Ex-215\$]; 8:20,1.2[Ex-216\$]; 8:21,1.1; 8:23,2.1; 8:23,3.1[Ex-215\$]; 8:28,2.1; 8:33,1.1; 8:36,1.1; 8:37,1.1[Ex-215\$]; 9:5,1.1[Ex-215\$]; 9:6,2.1; 9:7,2.1; 9:12,1.1; 9:14,1.1; 9:14,2.1; 9:17,1.1; 9:20,1.1; 9:24,2.1[Ex-215\$]; 9:25,3.1; 9:31,2.1; 9:38,1.1; 9:38,2.1; 9:38,3.1; 9:40,1.1[Ex-215\$]; 9:40,2.1[Ex-215\$]; 9:43,1.2; 9:43,3.1[Ex-215\$]; 9:45,1.1[Ex-215\$]; 9:45,2.1[Ex-215\$]; 9:47,3.1[Ex-215\$]; 9:49,1.1[Ex-215\$]; 10:1,1.1; 10:4,1.1; 10:5,1.1; 10:6,1.1; 10:11,2.1; 10:13,1.1; 10:13,2.1;

originated the following 201 variants peculiar to this entire text tradition, such variants cannot be original:

Western Recension

First-generation exemplar Ex-205# was the Western recension, being the text from which most of the Old Latin translations were made. It differs from the autographic text by 111 secondary variants,⁷ among which it uniquely originated the following 65 variants peculiar to this entire text tradition, such varriants cannot be original:

Tracing Variant History

For various reasons, it may be of interest to trace the history of the genealogical heritage of the alternate readings at particular places of variation. For each variant at the desired place, one may want to see where it originated in genealogical history and how it was subsequently distributed by genetic inheritance. Upon request, software program Lachmann-10 displays the genealogical history of the variants at any selected place of variation. It constructs the historical tree diagram and displays on the monitor screen the generation and index number of the variant contained in each and every witness. The following section presents typical examples of possible studies of interest. In the examples that follow, the genealogical tree diagram of Figure 3.2 (found in Chapter 3) is used to display the genealogical distribution of the variants at the selected place of variation. For example, “Ex-205-1” means that exemplar Ex-205 has the first variant there; “B*-3” means that witness B* (Codex Vaticanus) has the third variant there; and “0171%-0” means that fragment 0171% has a lacuna there. Only one descendant of an exemplar is displayed, usually the prominent one, but it may be assumed that all its sibling descendants have the same reading unless otherwise indicated. Colors are used to mark the genealogical descent of the alternate readings: green marks the genealogical descent of the autographic reading, and other colors mark that of the alternate readings there.

Variants of Textual Interest

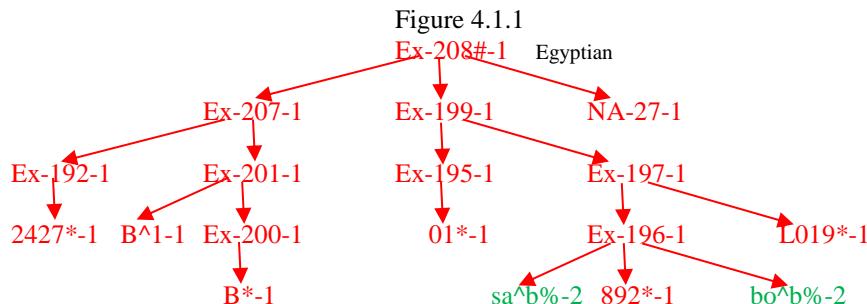

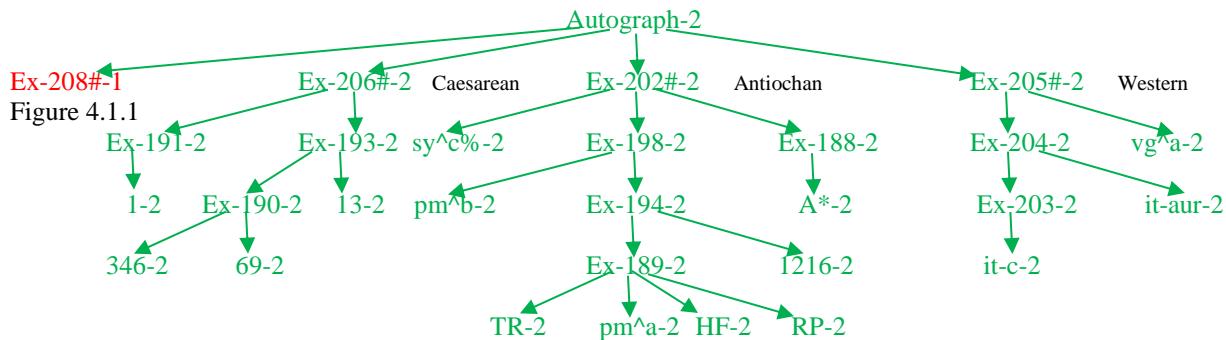

The genealogical history of some variants is more interesting than that of others because of their significance for translation. For example whole verses are missing in some witnesses (7:16; 9:44; 11:26; 15:28); and then there is the question about the presence or absence of the short and long endings to the book. Also some places of variation have multiple options widely distributed among the witnesses (8:26; 11:3,2); the genealogical history may help to decide which option is more likely original.

Omit 7:16?

The sixteenth verse of chapter seven is lacking in some witnesses: “If anyone has ears to hear, let him hear!” Witnesses with variant 1 lack the verse while those with variant 2 contain it. Figure 4.1 displays the distribution of the variants throughout genealogical history. Variant 2 has the consensus of three of the four first-generation recensions; it was selected as the autographic

reading on this basis. Variant 2 occurs in all the Western witnesses (Exemplar Ex-205# and its descendants); it also occurs in all the Caesarean witnesses (Exemplar Ex-206# and its descendants); and it occurs in all the Antiochan witnesses (Exemplar Ex-202# and its descendants). In addition, it occurs the Sahedic translation ($sa^b\%$) and the Boharic translation ($bo^b\%$), descendants of fourth-generation exemplar Ex-196 in the Egyptian text tradition. Variant 1 occurs only in all the Egyptian witnesses (Exemplar Ex-206#), except for $sa^b\%$ and $bo^b\%$.

Figure 4.1
Distribution of 7:16

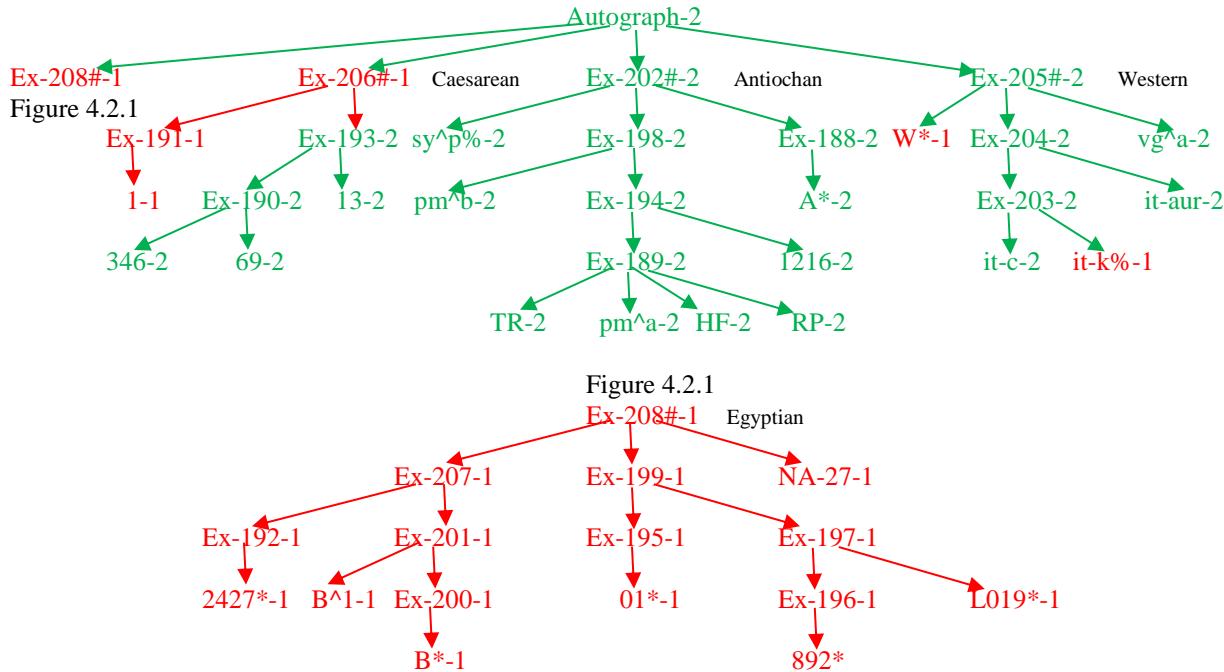

Variant 2, containing the verse, has greatest antiquity, greatest distribution, excellent heritage and persistence. Variant 1, lacking the verse, lacks antiquity because it originated in the Egyptian recension; and it lacks broad distribution, but it has excellent heritage and persistence.

Omit 9:44?

The forty-fourth verse of chapter nine is lacking in some witnesses: “where their worm does not die, And the fire is not quenched.” Witnesses with variant 1 lack the verse while those with variant 2 contain it. Figure 4.2 displays the distribution of the variants throughout genealogical history.

**Figure 4.2
Distribution of 9:44**

This place of variation lacks consensus among the first-generation recensions; each reading having 50% probability. In this case, Lachmann-10 selected variant 2, the presence of the verse. Metzger said the NA-27 editorial committee rejected the verse on the basis of important early witnesses and on the likelihood that copyists added it from verse 48;¹⁰ they did the same at verse 46 where the same situation exists.

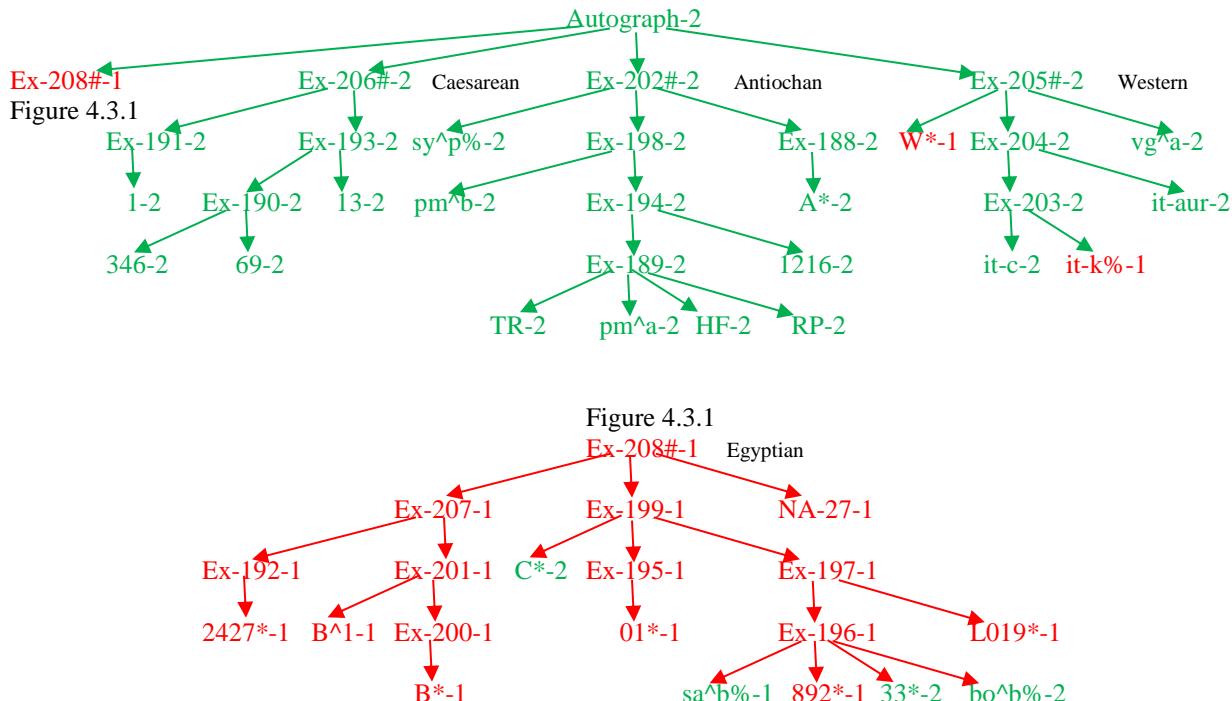

Variant 1, the absence of the verse, is supported by the Egyptian Recension (exemplar Ex-208#) and by the Caesarean Recension (exemplar Ex-206#), although the Caesarean text tradition is divided on this issue. Variant 2, the presence of the verse, is supported by all the witnesses of the Western text tradition (exemplar Ex-205#), except for MS W* and its corrector, and Old Latin it-k%; and by all the witnesses in the Antiochan text tradition (exemplar Ex-202#); and by the descendants of second-generation exemplar Ex-193, the source of Family-13, of the Caesarean. Neither variant may be regarded as having antiquity because of uncertain internal evidence; Jesus may have redundantly repeated the words for their emphatic rhetorical effect. Both readings have good heritage and persistence except for the Caesarean text tradition which is split in the second generation, adding support to the presence of the verse and diminishing support of its absence.

¹⁰ Metzger, *Commentary*, p. 102.

Omit 11:26?

The twenty-sixth verse of chapter eleven is lacking in some witnesses: “But if you do not forgive, neither will your Father in heaven forgive your trespasses.” Witnesses with variant 1 lack the verse while those with variant 2 contain it. Figure 4.3 displays the distribution of the variants throughout genealogical history.

Figure 4.3
Distribution of 11:26

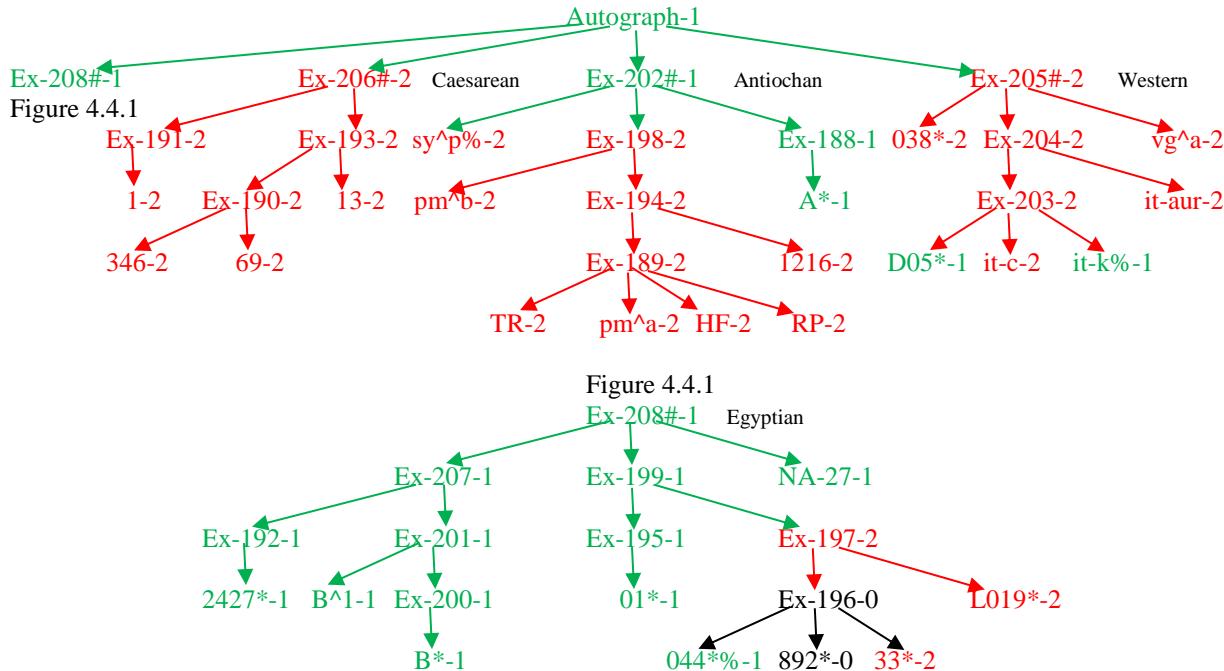

Variant 2 has the consensus of three of the four first-generation recensions, with a probability of being original of 75 percent; it was selected as the autographic reading on this basis. Variant 2 occurs in all the Western witnesses (Ex-203#), except for MS W* and its corrector, descendants of first-generation exemplar Ex-205#; and except for Old Latin fragment it-k%, a descendant of third-generation exemplar Ex-203; it also occurs in all of the witnesses of the Caesarean text tradition (Ex-206#), and in all the witnesses of the Antiochan text tradition (Ex-208#). Variant 1 occurs in nearly all of the witnesses of the Egyptian text tradition (Ex-208#), except for MS C*, a descendant of second-generation exemplar Ex-199, and except for MS 33* and its corrector, and for fragmentary Boharic translation bo^b% and Sahidic translation sa^b%, all descendants of fourth-generation exemplar Ex-196.

Variant 2, containing the verse, has greatest antiquity, greatest distribution, and excellent heredity and persistence. Variant 1, lacking the verse, has no antiquity, having originated in the Egyptian recension, and lacks distribution, but has good heritage and persistence.

Omit 15:28?

The twenty-eighth verse of chapter fifteen is lacking in some witnesses: “So the Scripture was fulfilled which says, ‘And He was numbered with the transgressors.’” Witnesses with variant 1 lack the verse while those with variant 2 contain it. Figure 4.4 displays the distribution of the variants throughout genealogical history.

Figure 4.4
Distribution of 15:28

This place of variation lacks consensus among the first-generation recensions. Two have variant 1: the Egyptian recension (Ex-208#) and the Antiochan Recension (Ex-202#); and two have variant 2: the Western recension (Ex-205#) and the Caesarean recension (Ex-206). In this case, Lachmann-10 defaulted to the reading of NA-27 on the assumption that it has the better internal evidence.

Variant 1, lacking the verse, occurs in all the witnesses in the Egyptian branch, except MS L019* and its correctors, descendants of third-generation exemplar Ex-197, and for fragmentary MS 33* and fragmentary Boharic bo^b%, both descendants of fourth-generation exemplar Ex-196. This variant is also supported by the first-generation witnesses of the Antiochan branch headed by exemplar Ex-202#, and by MS A* and its correctors, descendants of second-generation exemplar Ex-188. However, the Antiochan text tradition is divided at the second generation, and from second-generation exemplar Ex-198 on, all Antiochan witnesses support variant 2.

Variant 2, containing the verse, occurs in all the witnesses in the Western branch (Ex-205#), except for fragmentary Syriac translation sy^{s%} (not shown), a descendant of first-generation exemplar Ex-205#, and for MS D05* and its correctors together with fragmentary Old Latin translation it-k%, both descendants of third-generation exemplar Ex-203. This variant also occurs in all the witnesses of the Caesarean branch (Ex-206), also in all the Antiochan witnesses in the sub-branch headed by second-generation exemplar Ex-198.

Neither variant can claim antiquity because of ambiguity among the first-generation recensions. Variant 2 has the wider distribution, and very good heredity and persistence. Variant 1 lacks distribution, but has good heredity and persistence. In this case Lacchmann-10 may not have made the best decision, but it at least gave a full display of the genealogical evidence regarding distribution, heredity and persistence.

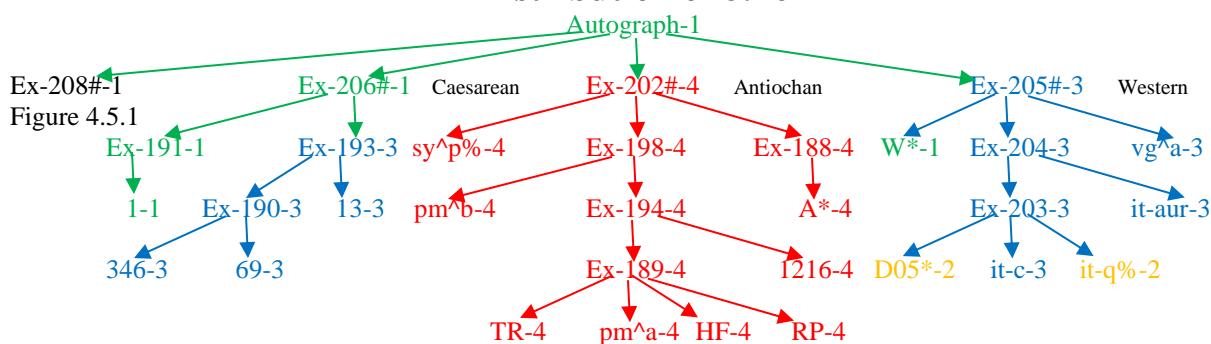

Multiple Variants at 8:26

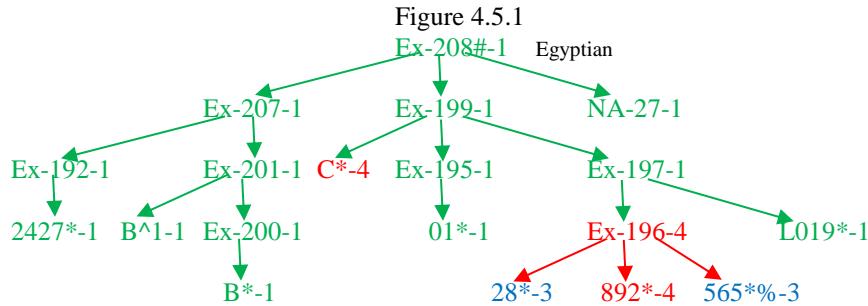

Mark 8:26 has the following four significantly different variants:

- (1) μηδε εἰς τὴν κωμῆν εἰσελθης: Do not even enter the village.
- (2) οπαγε εις τον οικον σου και μηδενι ειπης εις την κωμην: Go to your house and say nothing in the village
- (3) οπαγε εις τον οικον σου και εαν εις την κωμην εισελθης μηδενι ειπης μηδε εν τη κωμη: Go to your house, and if you go into the village, do not tell anyone
- (4) μηδε ειπης τινι εν τη κωμη: Say nothing to anyone in the village

Figure 4.5 displays the distribution of these variants throughout genealogical history.

Figure 4.5
Distribution of 8:26

Variant 1 is supported by two of the first-generation recensions: the Caesarean recension (Ex-206#) and the Egyptian recension (Ex-208#) with a probability of 50%. Variant 3 is supported by the Western recension (Ex-205#) with a probability of 25%, and variant 4 is supported by the Antiochan recension (Ex-202#) with a probability of 25%. Lachmann-10 selected variant 1 as the autographic reading on the basis of greater consensus in spite of its low probability.

Variant 1 is supported by all the witnesses in the Egyptian text tradition, except for MSS 892*, 565*, 28* and their correctors, along with Boharic translation bo^b%, all descendants of fourth-generation exemplar Ex-196; it is also supported by all the witnesses in the branch headed by second-generation exemplar Ex-191 (Family-1) of the Caesarean text tradition. Lachmann-10 assigned variant 1 to the Caesarean recension (Ex-206#) on the assumption that the NA-27 reading has the better internal evidence in cases of ambiguity. Variant 1 is also supported by MS W* and its correctors, and by Syriac translation sy^s%, descendants of the first-generation exemplar Ex-205# of the Western text tradition. This reading has antiquity, the best distribution, heredity, and persistence.

Variant 2 occurs in only a few witnesses in the Western text tradition: MS D05* and its correctors and Old Latin it-d and it-q*% and its corrector, all of which are descendants of second-generation exemplar Ex-203. This variant has no antiquity, no distribution, no heritage, and no persistence.

Variant 3 is supported by all the witnesses in the Western text tradition, except for those witnesses mentioned above. It is also supported by all the witnesses in the sub-branch headed by second-generation exemplar Ex-193 (Family-13) of the Caesarean text tradition. It also occurs in MSS 28*, and 565* and their correctors, descendants of fourth-generation exemplar Ex-196 of the Egyptian text tradition. This variant lacks antiquity because it originated in the Western recension (Ex-205#); but it has moderate distribution, good heritage and persistence.

Variant 4 is supported by all the witnesses in the Antiochan text tradition. It also occurs in MSS 33* and 892*, together with their correctors, plus Boharic translation bo^b%, all descendants of fourth-generation exemplar Ex-196 of the Egyptian text (not shown). This variant lacks

antiquity because it originated in the Antiochan recension (Ex-208#), it also lacks distribution, but it has good heredity and persistence. The genealogical evidence supports variant 1 as the autographic reading, but with marginal probability.

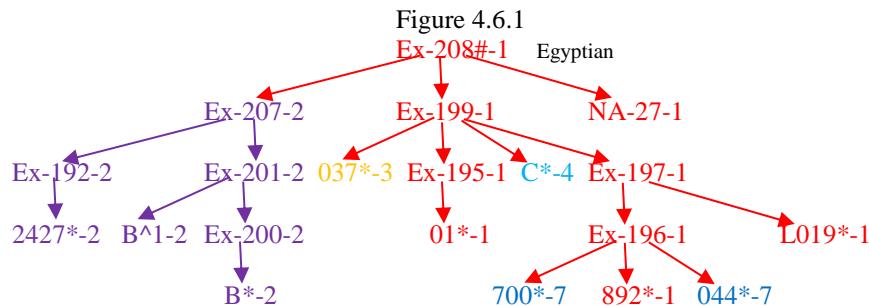

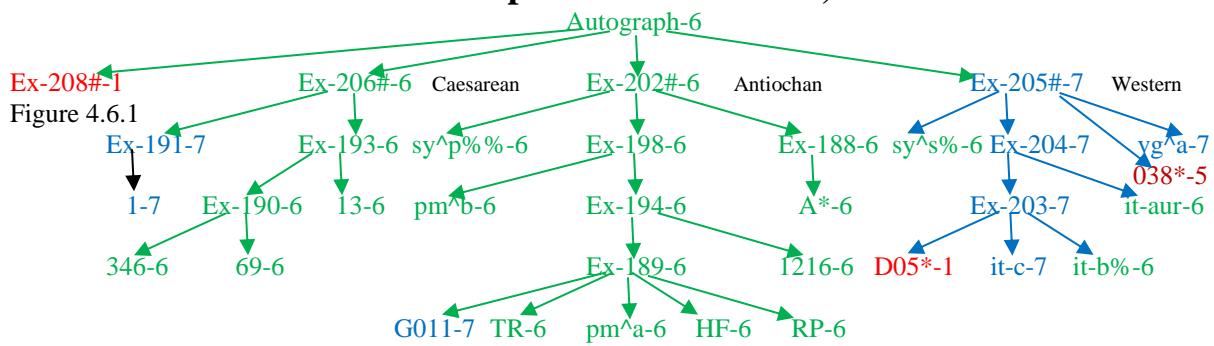

Multiple Variants at 11:3,2

Mark 11:3,2 has the following seven different variants:

- (1) *αὐτον ἀποστέλλει παλιν*: he will send back
- (2) *ἀποστέλλει παλιν αὐτον*: he will send back it
- (3) *ἀποστέλλει παλιν*: he will send back
- (4) *αὐτον παλιν ἀποστέλλει*: it back he will send
- (5) *παλιν ἀποστέλλει αὐτον*: back he will send it
- (6) *αὐτον ἀποστέλλει*: it he will send
- (7) *αυτον αποστελει*: it he will send (variant spelling)

Figure 4.6 displays the distribution of the variants at 11:3,2 throughout genealogical history. Variant 6 has the consensus of two of the four first-generation recensions: the Caesarean recension (Ex206#), and the Antiochan recension (Ex-202#) with a probability of 50%; as opposed to variant 7 the reading of the Western recension (Ex-205#) with a probability of 25%, and variant 1 the reading of the Egyptian recension (Ex-208#) with a probability of 25%.

Figure 4.6
Multiple Variants at 11:3,2

Variant 6 is supported by all the witnesses in the Antiochan text tradition, except for MS G011, a descendant of fifth-generation exemplar Ex-189; it occurs also in all the witnesses the branch of the Caesarean text tradition headed by second-generation exemplar Ex-193 (Family-13). The Caesarean text tradition is split here; the other branch headed by second-generation exemplar Ex-191 (Family-1) supports variant 7. Lachmann-10 deferred to variant 6 here in the assumption that the lower variant number has the better internal evidence. This variant has the best antiquity, distribution, heredity, and persistence.

Variant 7 is supported by all the witnesses in the Western text tradition, except for MS 038* and Syriac translation sy^s, both descendants of first-generation exemplar Ex-205#, and except for MS D05* and its correctors, and Old Latin it-aur and it-b (not shown), descendants of second-generation exemplar Ex-203. It is also supported by all the witnesses in the branch of the Caesarean text tradition headed by second-generation exemplar Ex-191 (Family-1). It is supported by MS 044*, a descendant of fourth-generation exemplar Ex-196 of the Egyptian text tradition, and by MS G011, a descendant of fourth-generation exemplar Ex-189 of the Antiochan text tradition. This variant lacks antiquity because it originated in the Western recension (Ex-205#); but otherwise it has moderate distribution, and good heredity and persistence.

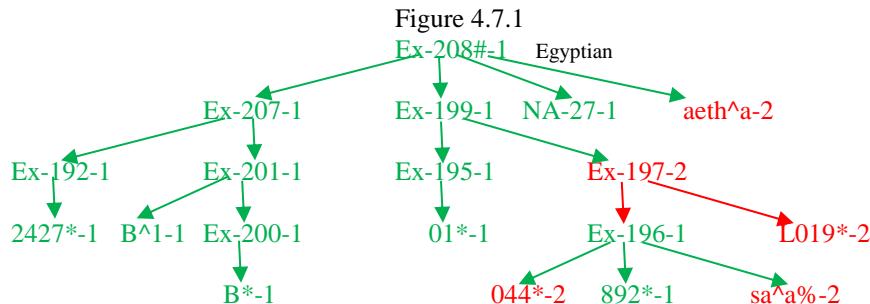

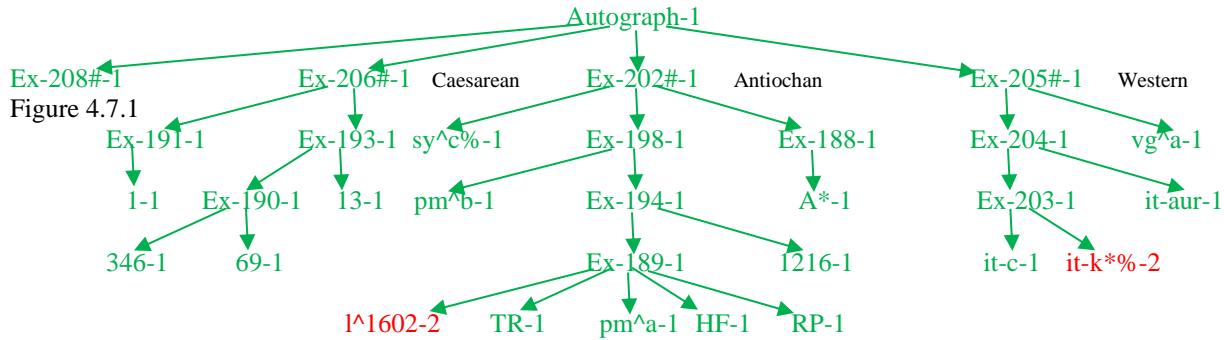

Variant 1 is supported by all the witnesses in the Egyptian text tradition, except for those in the sub-branch headed by second-generation exemplar Ex-207, and except for MSS 037* and C*, descendants of second-generation exemplar Ex-199, and for MSS 700* and 044* and their correctors, both descendants of fourth generation exemplar Ex-196. For this place of variation, Codex Sinaiticus (01*) and Codex Vaticanus (B*) differ. It is also supported by MS D05* and its correctors (not shown), and by Old Latin it-d (not shown), both descendants of third-generation exemplar Ex-203 of the Western text tradition. This variant lacks antiquity because it originated in the Egyptian recension (Ex-206#), and it lacks distribution, but has relatively good heredity and persistence.

Variant 2 is supported by all the witnesses in the sub-branch of the Egyptian text tradition headed by second-generation exemplar Ex-207; it has no antiquity and no distribution, but good heredity and persistence. Variant 3 is supported only by MS 037*, a descendant of second-generation exemplar Ex-199 of the Egyptian branch. Variant 4 is supported only by MS C*, a descendant of second-generation exemplar Ex-199 of the Egyptian text tradition. Variant 5 is supported by only MS 038*, a descendant of first-generation exemplar Ex-205# of the Western text tradition. These last three variants are singularities, having no antiquity, distribution, heredity, or persistence. The genealogical evidence supports Variant 6 as the autographic reading, but with a probability of only 50%.

The Short Ending at 16:8?

Some witnesses have what is known as the short ending following verse 8 of chapter 16. As far as the short ending is concerned, the genealogical distribution of its variants is overwhelmingly against including it in the text. Figure 4.7 displays the distribution of this ending throughout history. Witnesses having variant 1 omit the short ending, whereas those having variant 2 have it.

Figure 4.7
The Short Ending at 16:8,4?

Variant 1 is supported by all four text traditions except for a few mostly genealogically isolated manuscripts or translations in the Egyptian text tradition (aeth^a%, L019*, L019^c, sa^a%, sa^c%, 044*, 044^c, 083*, 099%, 579, l^1602) and the Western tradition (it-k), some are not shown; most are singularities, having no antiquity, distribution, heredity, or persistence..

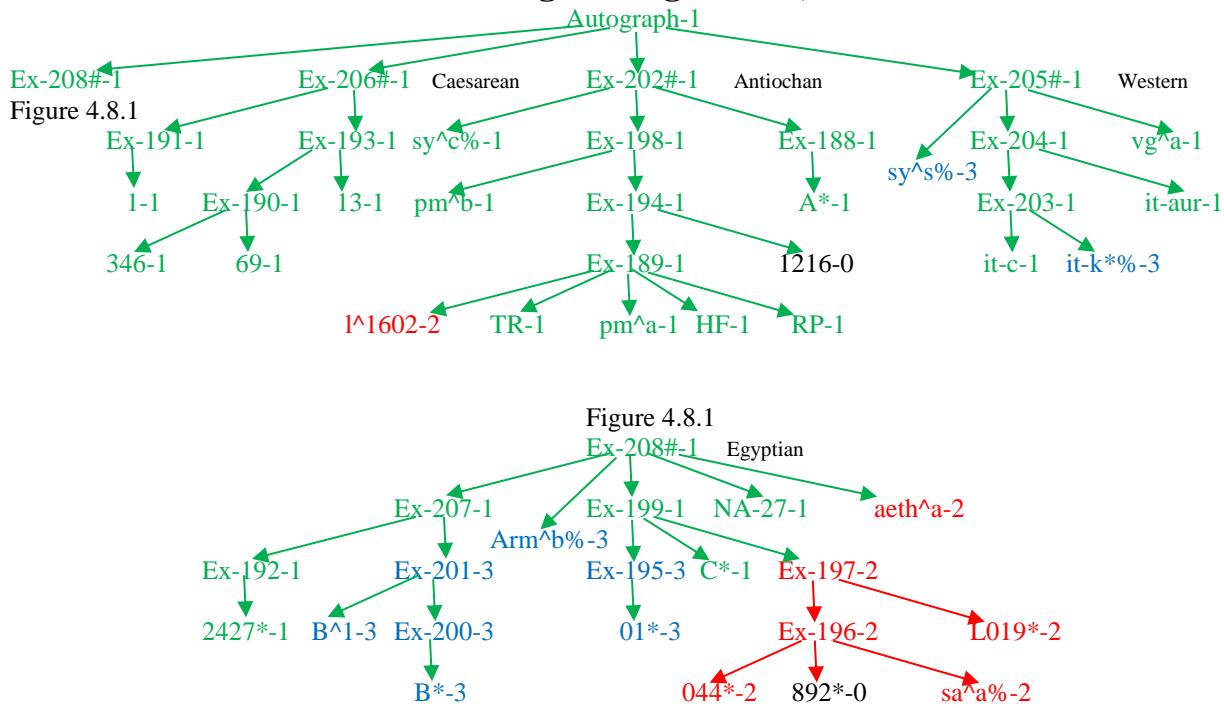

The Long Ending at 16:8?

On the other hand the genealogical distribution of the variants of the long ending has significant interest. There are three variants in this place:

- (1) Add verses 9-20 after verse 8.
- (2) Add the short ending after 9-20.
- (3) Omit verses 9-20.

Figure 4.8 displays the distribution of the long ending variants.

Figure 4.8
The Long Ending at 16:8,13?

Variant 1, containing the long ending, has the consensus of all four first-generation recensions, being distributed widely throughout the tree in all four branches, and so it was selected as the autographic reading. This reading has antiquity, distribution, heredity, and persistence.

Variant 2 occurs in the Ethiopic translation *aeth[^]a*, a descendant of first-generation exemplar Ex-208# of the Egyptian branch. It occurs also in most witnesses in the fourth-generation branch (Ex-197) of the Egyptian text tradition; in addition, it occurs Lectionary l[^]1602, a descendant of fourth-generation exemplar Ex-189 in the Antiochan branch. This reading lacks antiquity and distribution, but it has good heredity and persistence after it was initiated.

Variant 3, missing the long ending, occurs in the witnesses in the sub-branch of the Egyptian text tradition headed by third-generation exemplar Ex-195, Codex Sinaiticus (01*) and its correctors; it occurs in the witnesses in the sub-branch of the Egyptian text tradition headed by third-generation exemplar Ex-201, Codex Vaticanus (B*) and its correctors, together with church fathers Jerome (Hie[^]b) and Eusebius (Eus[^]b). It also occurs in Syriac translation *sy[^]s*, a descendant of the first-generation exemplar Ex-205#, and in Old Latin *it-k*%*, a descendant of third-generation exemplar Ex-203, both of the Western text tradition. The ending is also lacking from the ancient Sahidic translation (*sa[^]b*), from the Armenian translation (*arm[^]a*), not included in the diagram. This reading lacks antiquity, distribution, heredity, and persistence. The genealogical evidence is strong for the inclusion of the long ending. The internal evidence against inclusion is

based on vocabulary and style, assuming that one knows all there is to know about Mark's vocabulary and style.

Variants of Theological Interest

Although most textual variations have little or no practical theological significance, a number are found in theological discussions. For example, Bart D. Ehrman argued that the earliest form of the Greek New Testament was less "orthodox" than the canonical form that emerged at the end of the "proto-orthodox" debates that culminated in the dominance of the "orthodox" parties in the fourth century. He wrote:

It was within this milieu of controversy that scribes sometimes changed their scriptural texts to make them *say* what they were already known to *mean*. In the technical parlance of textual criticism—which I retain for its significant ironies—these scribes “corrupted” their texts for theological reasons.¹¹

He is right about the ante-Nicene debates over the various heretical issues of the time and the emerging dominance of the orthodox parties, but his thesis that the doctrine of the apostles and first-century church, and the earliest form of the New Testament text were less "orthodox" is purely hypothetical. Of course, he provided what he regards as evidence. However, my own evaluation of the evidence he presented to establish his thesis indicates that the readings supported by the "consensus of ancient independent witnesses" are genuinely orthodox as normally interpreted, and that his "orthodox corruptions"—those intended to make orthodox doctrine more explicit—are found only in peripheral sources having little chance of being textually authoritative. The same may be said of any alleged "unorthodox" variants. So, I must conclude that what Ehrman really means is that the traditional canons of textual criticism are of no value for understanding the early text, that the "canonical text" of the New Testament is an "orthodox corruption," and that the original text, if there ever was one original, is forever lost. The one thing he was sure of according to his "Socio-historical" research is that the earliest text was not "orthodox" and the current form of the text (i.e., the NA-28 text) is a corruption of the original text, being altered by orthodox scribes for theological reasons.

Ehrman has a problem, however, because, by his own admission, he does not know what the original text was. So how can he know it was corrupted? Also, evidently he does not know, or at least he rejects, the fact that each existing witness has within its variants the history of its genealogical descent from the original text, and the fact that genealogical principles reconstruct the original text back to the first century, the time of the apostles. So, the reconstructed text is a first

¹¹ Bart D. Ehrman, *The Orthodox Corruption of Scripture* (New York: Oxford University Press, 1993), xii; italics his.

century event, not a fourth century one, and it is theologically orthodox, not a corruption. The following is some of the evidence he presented regarding the doctrine of Christ in the Gospel of Mark:

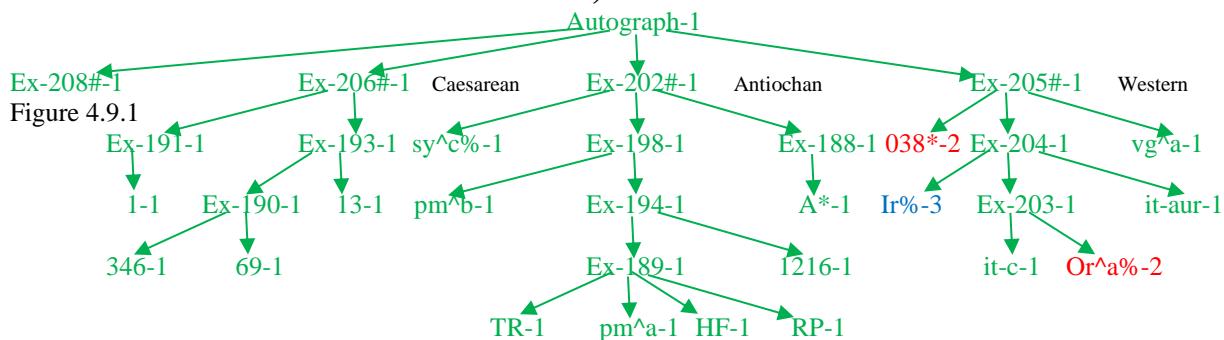

Mark 1:1,1

Ehrman asserted: “Given the adoptionist’s view that Jesus’ sonship dates from the time of his baptism, it is not surprising to find textual corruptions that speak of him as God’s Son even before this revelatory event.”¹² He used the phrase “Son of God” in Mark 1:1 as an example. However, his assumption that the adoptionist view of Jesus’ Sonship is the view of early Christianity is faulty. The adoptionist view was declared heretical in the second century, meaning that at that time the adoptionists were already a minority. Furthermore, the text recovered by genealogical principles clearly originated in the first century, and it indicates that the alleged adoptionist reading is sparse and late. At Mark 1:1,1 There are four variants at this place of variation:

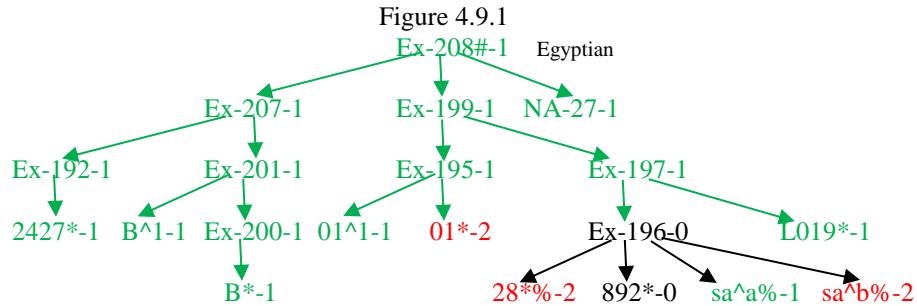

- (1) *υιον θεον*: Son of God
- (2) omit
- (3) omit also *Ἰησοῦ χριστοῦ*: omit also Jesus Christ
- (4) *υιον του κυριου*: the Son of the Lord

Figure 4.9 displays the distribution of these variants throughout the history of the text.

Figure 4.9
Mark 1:1 Son of God?

¹² Ehrman, p. 72.

Variant 1 dominates the history, being the consensus of the four first-generations recensions, and so accepted as the autographic reading. This reading has antiquity, distribution, heredity, and persistence. Variant 2 occurs in Codex Sinaiticus (01* AD 350) in third-generation branch (Ex-195) of the Egyptian text tradition (Ex-208#), but was corrected to variant-1 by its first corrector (01^1 AD 550). Variant 2 also occurs in MSS 038* and 038^c, descendants of Western recension (Ex205#). It occurs in the text of church father Origen (Or^a% AD 254), a descendant of third-generation exemplar Ex-203 of the Western branch; also in fragmentary MS 28*% (AD 1050) and its corrector (28^c%), and in Lectionary l^2211 (AD 995), and in Sahadic translation sa^b%, all descendants of fourth-generation exemplar Ex-196 of the Egyptian branch. Variant 3 occurs only in the texts of church father Irenaeus (Ir AD 150) and Epiphanius of Constantia (Epiph AD 403), not shown in the diagram., descendants of third-generation exemplar Ex-203 of the Western branch. Variant 4 occurs only in MS 1241 (AD 1150) also a descendant of fourth-generation exemplar Ex-196 of the Egyptian branch (but not shown). All these are terminal witnesses having no antiquity, no distribution, and no heredity and persistence. Clearly the orthodox reading dominated historical genealogical descent.

Mark 1:10,2

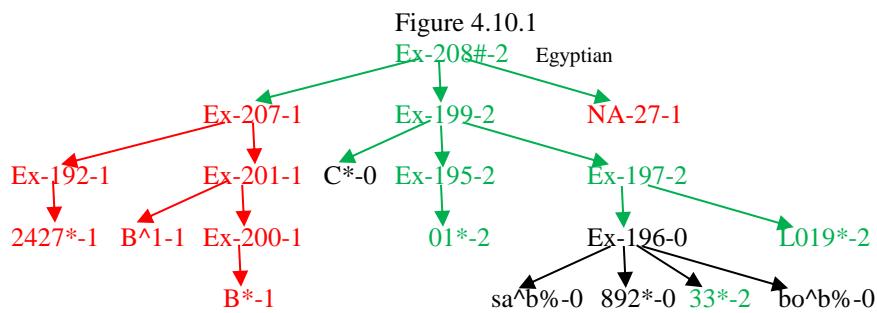

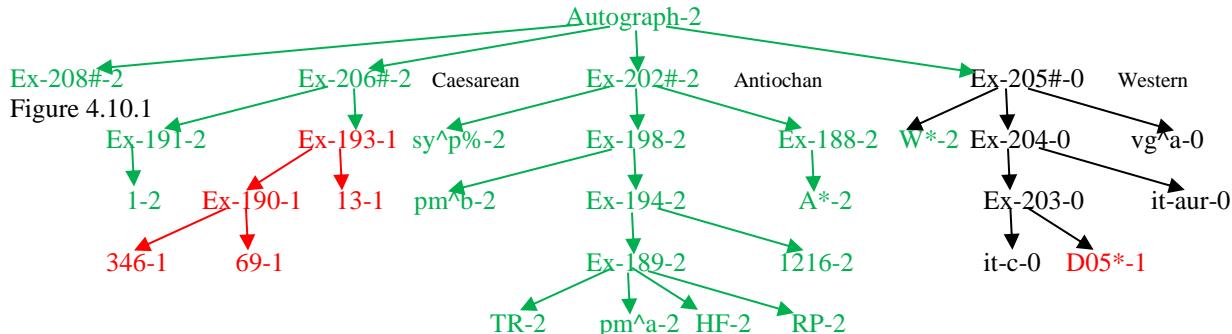

The theological question with this passage was whether the Holy Spirit descended into ($\epsilon i \zeta$) or upon ($\epsilon \pi \iota$) Jesus. Ehrman stated: “The difficulty of this reading is fairly obvious. The preposition $\epsilon i \zeta$ commonly means ‘into,’ so that the text as Mark originally wrote it is especially vulnerable to the Gnostic claim that at Jesus’ baptism a divine being entered into him. . . . It is worth noting, however, that both Matthew and Luke changed the preposition to $\epsilon \pi \iota$ (‘upon’).”¹³ There are two variants at this place:

- (1) $\epsilon i \zeta$: into
- (2) $\epsilon \pi \iota$: upon

¹³ Ehrman, p. 141. It is also worth noting that here Ehrman knows what Mark originally wrote, although he ordinarily claims that he knows neither author nor what was originally written. He also mistakenly refers to this passage as Mark 1:11.

Figure 4.10 displays the distribution of these variants throughout the history of the text.

Figure 4.10
Mark 1:10,2 Into or Upon?

Variant 2 (upon) has the consensus of three (Ex-202#, Ex-206#, and Ex-208#) of the four first-generation recensions, and so was selected as the autographic reading. Actually, the Western recension (Ex-205#) lacks a reading because the NA-27 editors could not determine the underlying Greek preposition of the Latin translations here, so one may understand that variant 2 has 100% consensus. This reading has antiquity, distribution, heredity, and persistence.

Variant 1 (into) was supported by all the witnesses in the sub-branch of the Caesarean text tradition headed by second-generation exemplar Ex-193 (Family-13); it was also supported by all the witnesses in the sub-branch of the Egyptian text tradition headed by second-generation exemplar Ex-207 (Codex Vaticanus, etc.); finally, it was supported by MS D05* and its correctors, descendants of third-generation exemplar Ex-203 of the Western text tradition. This variant lacks antiquity and significant distribution, but it has good heredity and persistence once it was initiated. The highly regarded fifth-generation witnesses Codex Sinaiticus (01*) and Codex Vaticanus (B*) differ at this place of variation. In this case, the NA-27 editors chose to follow Codex Vaticanus (B*) against Codex Sinaiticus (01*) and most other witnesses. According to genealogical principles, the orthodox reading is original and the unorthodox reading is marginal.

Mark 1:34,3

The theological question at this reference is whether the demons recognized Jesus to be the Christ or whether they just recognized Him. Ehrman stated:

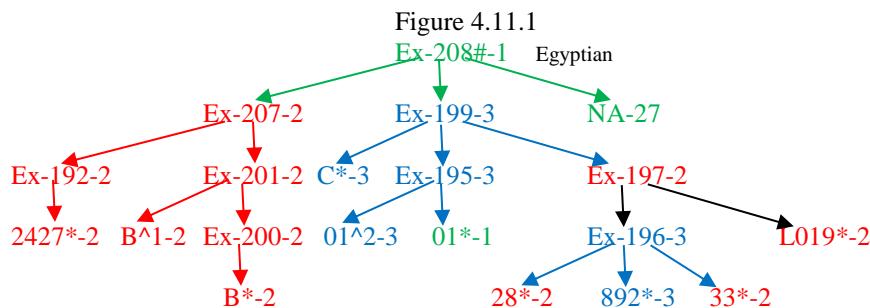

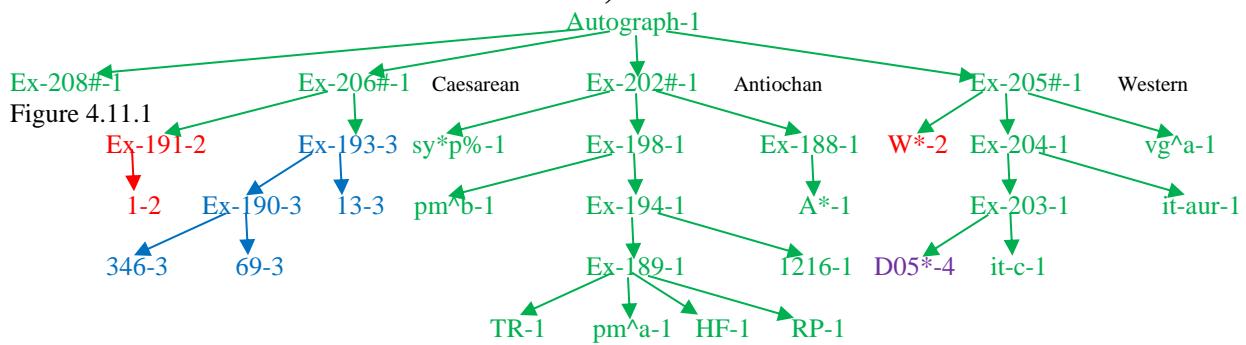

The identification of Jesus as the Christ is made explicit, for example, in numerous texts that refer to Jesus' ministry, particularly those in which others acknowledge his identity. Thus, when Jesus confronts demons who "know him" in Mark 1:34, orthodox scribes interpolated the affirmation essential to their own Christology, so that now the demons are said to know "him [i.e., Jesus] to be the Christ."¹⁴

In other words, the orthodox scribes corrupted the text so as to affirm that Jesus was recognized as the Christ. There are four variants at this place of variation:

- (1) *αὐτὸν*: him
- (2) *αυτον χριστον ειναι*: him to be Christ
- (3) *τον χριστον αυτον ειναι*: him to be the Christ
- (4) *αυτον και εθεραπευσεν πολλους κακως εχοντας ποικιλαις νοσοις και δαιμονια πολλα εξεβαλεν*: him, and he healed many who were sick with various diseases, and cast out many demons.

Figure 4.11 displays the distribution of these variants throughout the history of the text.

Figure 4.11
Mark 1:34,3 The Christ?

¹⁴ Ehrman, p. 159.

Variant 1 (him) has the consensus of all four first-generation recensions, and so was selected as the autographic reading. It was supported by all the witnesses in the Antiochan text tradition (Ex-202#), by nearly all the witnesses in the Western text tradition (Ex-205#), and by Codex Sinaiticus (01*), a descendant of third-generation exemplar Ex-195 of the Egyptian text tradition. In the case of the Caesarean (Ex206#) and Egyptian (Ex-208#) recensions, Lachmann-10 defaulted to the reading of NA-27 because of ambiguity among the second-generation witnesses. So, the probability of variant 1 being original is more in the range of 50%. This reading has antiquity, distribution, heritage, and persistence.

Variant 2 (him to be Christ) was supported by all the witnesses in the sub-branch headed by second-generation exemplar Ex-191 (Famiy-1) of the Caesarean text tradition (Ex-206#), and by all the witnesses in the sub-branch headed by second-generation exemplar Ex-207 of the Egyptian text tradition (Ex-208#). It is also supported by MSS 28*, 33*, 565%, l^2211%, together with their correctors, plus Sahidic translation sa^b% and Boharic translaton bo^b%, all descendants of fourth-generation exemplar Ex-196 of the Egyptian text tradition. Additionally, it is supported by MS L019* and its corrector, descendants of third-generation exemplar Ex-197 of the Egyptian text tradition. Also it is supported by Lectionary l^844% and its corrector, together with Boharic translations bo^a%, bo^c%, and bo^d%, all descendants of first-generation exemplar Ex-208# of the Egyptian text tradition. Some of these are not shown in the stemma. This reading lacks antiquity and distribution, but has good heredity and persistence after once initiated.

Variant 3 (him to be the Christ) was supported by all the witnesses in the sub-branch headed by second-generation exemplar Ex-193 (Famiy-13) of the Caesarean text tradition (Ex-206#), and by nearly all the witnesses in the sub-branch headed by second-generation exemplar Ex-199 of the Egyptian text tradition (Ex-208#). This reading lacks antiquity and distribution, but has good heredity and persistence after once initiated.

Variant 4 (him, and he healed many who were sick with various diseases, and cast out many demons) was supported only by MS D05* and its correctors, descendants of third-generation exemplar Ex-203 of the Western text tradition (Ex-205#).

The highly regarded witnesses Codex Sinaiticus (01*) and Codex Vaticanus (B*) differ at this place of variation. According to genealogical principles, the short reading is original and the alleged orthodox corruptions are marginal.

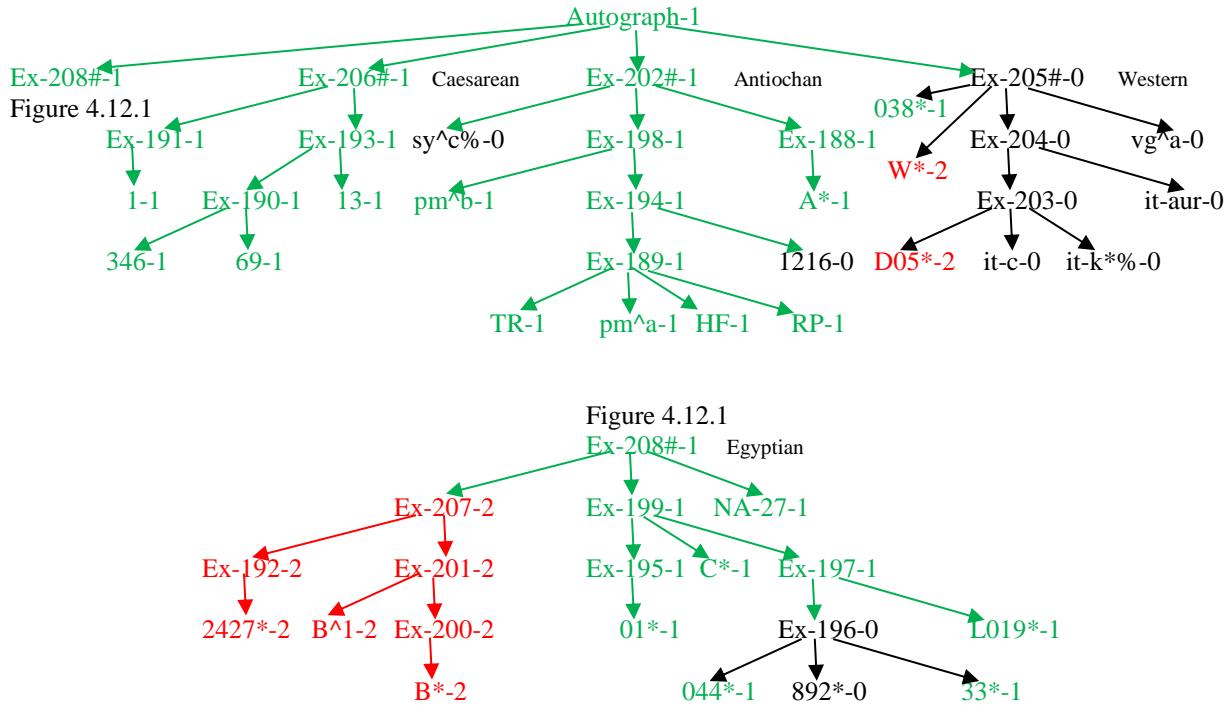

Mark 12:26,3

The theological question at this reference is whether the words of Jesus refer to God or to the pre-incarnate Christ. Ehrman stated:

A similar kind of variation may be found in manuscripts of Mark 12:26, where Jesus refers to the words spoken to Moses from the burning bush: “I am the God ($\delta\ \thetaεός$) of Abraham, the God ($\delta\ \thetaεός$) of Isaac, and the God ($\delta\ \thetaεός$) Jacob.” Orthodox Christians often interpreted the passage as referring to the pre-incarnate Christ who spoke to Moses; . . . Small wonder, then, that some manuscripts allow for the orthodox view that Christ as divine could appear and speak to the faithful of old, without himself, however, being “the” one God. This they have done by eliminating the articles in the passage, so that the divine voice identifies himself as $\thetaεός$ but not as $\delta\ \thetaεός$.¹⁵

It is doubtful that the missing articles constitute an orthodox corruption because they are missing in the third century BC Septuagint Greek translation (LXX), long before the rise of Christian Orthodoxy. But assuming Ehrman is right, figure 4.12 displays the distribution of these variants throughout the history of the text.

Figure 4.12
Mark 12:26,3 The God?

Variant 1 ($\delta\ \thetaεός$) has the consensus of three (Ex-202#, 206#, and Ex-208#) of the four first-generation recensions, and so was selected as the autographic reading. It was supported by nearly all the witnesses in the Caesarean text tradition (Ex-206#), by all the witnesses in the Antiochan text tradition (Ex-202#), and by a majority of the witnesses in the Egyptian text tradition (Ex-208#). The Western recension (Ex-205#) and nearly all its descendants have lacunae here because the NA-27 editors could not tell what the underlying Greek would have been. So the

¹⁵ Ehrman, p. 266.

probability that variant 1 is original should be near 100%. This reading has antiquity, distribution, heredity, and persistence.

Variant 2 ($\theta\epsilon\acute{\omega}\varsigma$) was supported by all the witnesses in the sub-branch of the Egyptian text tradition headed by second-generation exemplar (Ex-207). In addition the reading occurs in MS W* and its corrector, descendants of first-generation exemplar Ex-205# of the Western text tradition, and in MS D05* and its correctors, descendants of third-generation exemplar Ex-203 of the Western text tradition. This reading lacks antiquity and distribution, but it displays heredity and persistence after it was initiated.

The highly regarded witnesses Codex Sinaiticus (01*) and Codex Vaticanus (B*) differ at this place of variation. According to genealogical principles, the alleged orthodox corruption is not original but marginal. Actually, the words of Jesus are perfectly consistent with the Hebrew text of Exodus 3:6 from which they were derived.

Mark 12:36,2

The theological question at this reference is whether the words of Jesus refer to God or to the pre-incarnate Christ. Ehrman stated:

The proto-orthodox understanding of the relationship of the Lord Christ to God the Father may also lie behind simple changes introduced into the New Testament quotations of Psalm 110:1a. . . . In the Synoptic triple tradition, Jesus himself quotes the text to make a Christological point (Matt. 22:44; Mark 12:36; Luke 20:42), . . . In none of the Synoptic accounts, . . . is the article used with the first occurrence of *κύριος*, despite the fact that the context indicates that this is God himself speaking to the *κύριος* (of David). Possibly in order to clarify the relationship of the two *κύριοι*, that is, in order to solidify the point orthodox interpreters would draw from the context, numerous scribes from early times supplied the article in each case. . . . Now it is clearly *the Lord*, God himself, who is instructing the Lord Christ concerning what he is to do.¹⁶

This example seems contrary to Ehrman's thesis, because here he assumed that the proto-orthodox text is that of NA-28, while normally he regarded that text to be the canonical text (i.e., the text corrupted by orthodox scribes). Two variants of interest exist here:

(1) *κύριος* (no article), as in NA-27;

and (2) *ὁ κύριος* (with the article).

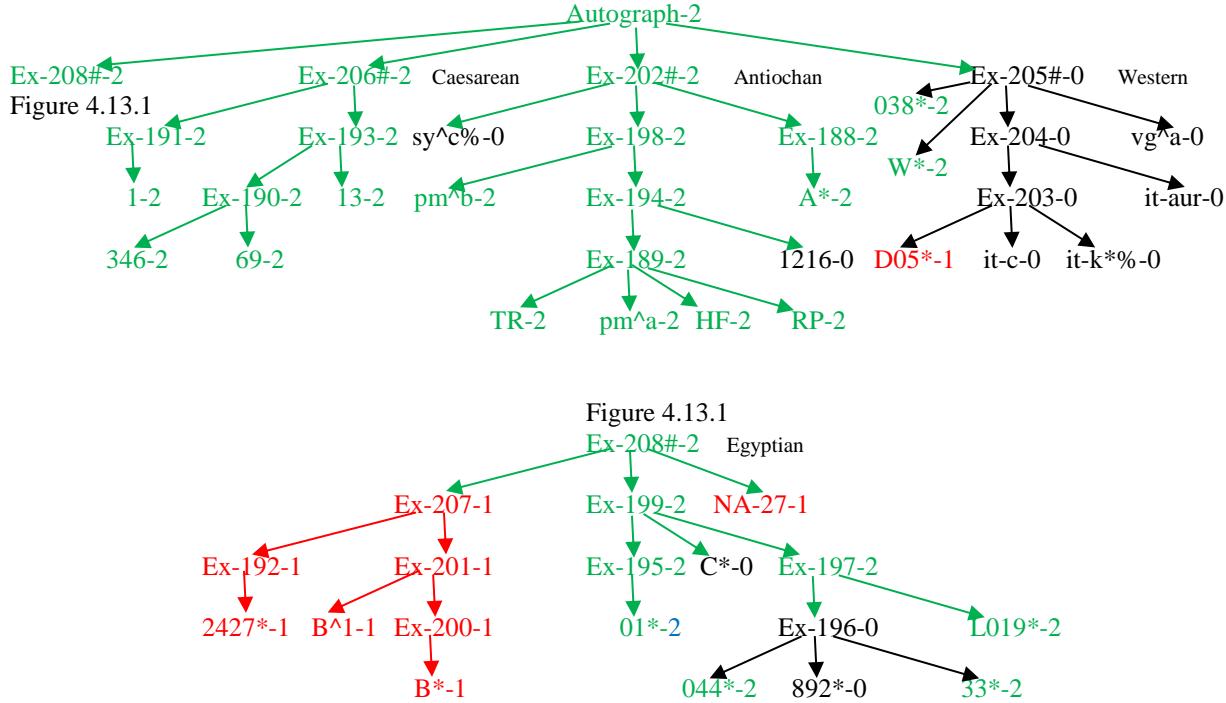

However, another inconsistency seems to be present: the New Testament authors usually quoted Old Testament passages from the text of the LXX, rather than translating directly from the Hebrew text. However, Ralph's' critical edition of the LXX has the definite article here without

¹⁶ Ehrman, p. 266.

any noted variants; also the Hebrew text here has the sacred name יהוָה which is always translated *the LORD* in English and ὁ κύριος in Greek.

Figure 4.13 displays the distribution of these variants throughout the history of the text.

Figure 4.13
“κύριος” or “ὁ κύριος” at 12:36,2

Variant 2 (ὁ κύριος the Lord) has the consensus of three (Ex-202#, 206#, and Ex-208#) of the four first-generation recensions, and so was selected as the autographic reading. It was supported by all the witnesses in the Caesarean text tradition (Ex-206#), by all the witnesses in the Antiochan text tradition (Ex-202#), and by a majority of the witnesses in the Egyptian text tradition (Ex-208#). The Western recension (Ex-205#) and nearly all its descendants have lacunae here because the NA-27 editors could not tell what the underlying Greek would have been. So the probability that variant 2 is original should be near 100%. This reading has antiquity, distribution, heredity, and persistence.

Variant 1 (κύριος Lord) was supported by all the witnesses in the sub-branch of the Egyptian text tradition headed by second-generation exemplar (Ex-207). In addition the reading occurs in MS D05* and its correctors, descendants of third-generation exemplar Ex-203 of the Western text tradition. This reading lacks antiquity and distribution, but it displays heredity and persistence after it was initiated. The highly regarded witnesses Codex Sinaiticus (01*) and Codex Vaticanus

(B*) differ at this place of variation. According to genealogical principles, the alleged orthodox corruption is not original but marginal.

These five examples are sufficient to demonstrate that, under careful scrutiny, the alleged “orthodox corruption” of the New Testament text turns out to be an unwarranted supposition. A scribe’s explication of a doctrinal statement in one passage that has been plainly and unambiguously stated in other passages does not amount to making the doctrine more explicit; it is just an instance of unnecessary scribal alteration for theological reasons. The author’s acquaintance with the common doctrinal knowledge his readers possessed is an important factor in determining how explicit his statements need to be at any particular place in his discourse. In order for the articulation of a doctrine to be made more “orthodox,” a scribe must have altered every passage discussing the doctrine; the evidence indicates that this did not happen. The problem with Ehrman’s “Socio-historical” research is that it does not consider the genealogical history of the witnesses to the Greek text of the New Testament. The genealogical evidence places the origin of his orthodox “canonical text” deep in the first century where ecclesiastical history places the original autograph; and it locates the origin of his “orthodox corruptions” in peripheral branches that have no chance of altering the orthodoxy of the text as a whole.

Other Variants of Theological Interest

The following is a discussion of some other passages in Mark where doctrinal issues have been raised by advocates of the Byzantine text tradition.

Mark 6:11

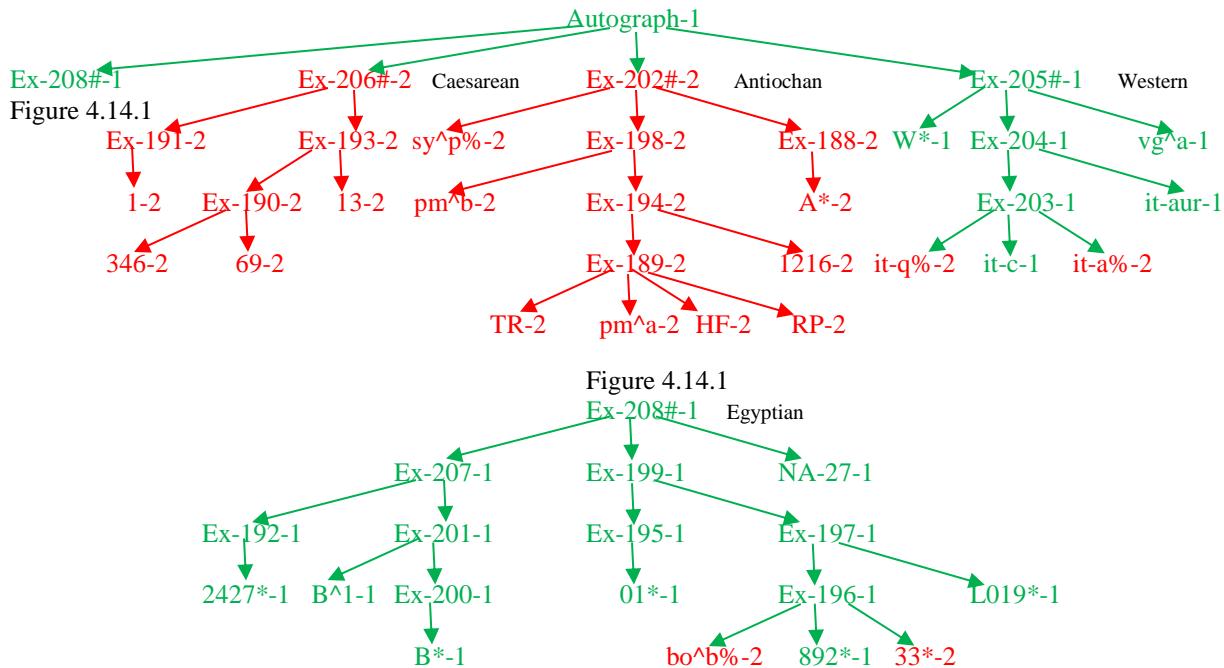

The theological question in this verse is whether or not Jesus’ saying included the words “Assuredly, I say to you, it will be more tolerable for Sodom and Gomorrah in the day of judgment than for that city!” Two variants occur here:

(1) **exclude the sentence;**

or (2) **include it.**

Figure 4:14 displays the distribution of these variants throughout the history of the text of Mark. The first variant has the consensus of two of the four first-generation recensions, the Western recension (Ex-205#) and the Egyptian recension (Ex-208#); the second variant has the consensus of the other two first-generation recensions, the Caesarean recension (Ex-206#) and the Antiochan recension (Ex-202#). Lachmann-10 resolved the ambiguity by selecting variant 1 (the NA-27 reading) as original on the assumption that it has the better internal evidence.

**Figure 4.14
Sodom and Gomorrah at 6:11**

Variant 1 occurs in all the witnesses of the Western text tradition (Ex-205#), except three Old Latin translations (it-a%, it-q, it-q^c), all descendants of third-generation exemplar Ex-203. All the witnesses in the Egyptian text tradition (Ex-208#) have the first variant except the few in the fourth-generation branch headed by exemplar Ex-196.

The second variant is supported by all the witnesses of Antiochan text tradition (Ex-202#) and the Caesarean text tradition (Ex-206#); in addition, it occurs in three Old Latin translations (it-a%, it-q, it-q^c), all descendants of third-generation exemplar Ex-203 of the Western text tradition; also in MS 33* and its corrector along with Boharic translation bo^b%, both descendants of fourth-generation exemplar Ex-196 of the Egyptian text tradition.

Both variants have the same antiquity, being both statistically uncertain. Both have the same level of distribution, heredity and persistence. The genealogical method cannot confidently determine which reading is original, but it portrays a good picture of their genealogical history. The internal evidence favors variant 1, the lack of the sentence in the autograph.

Mark 9:29

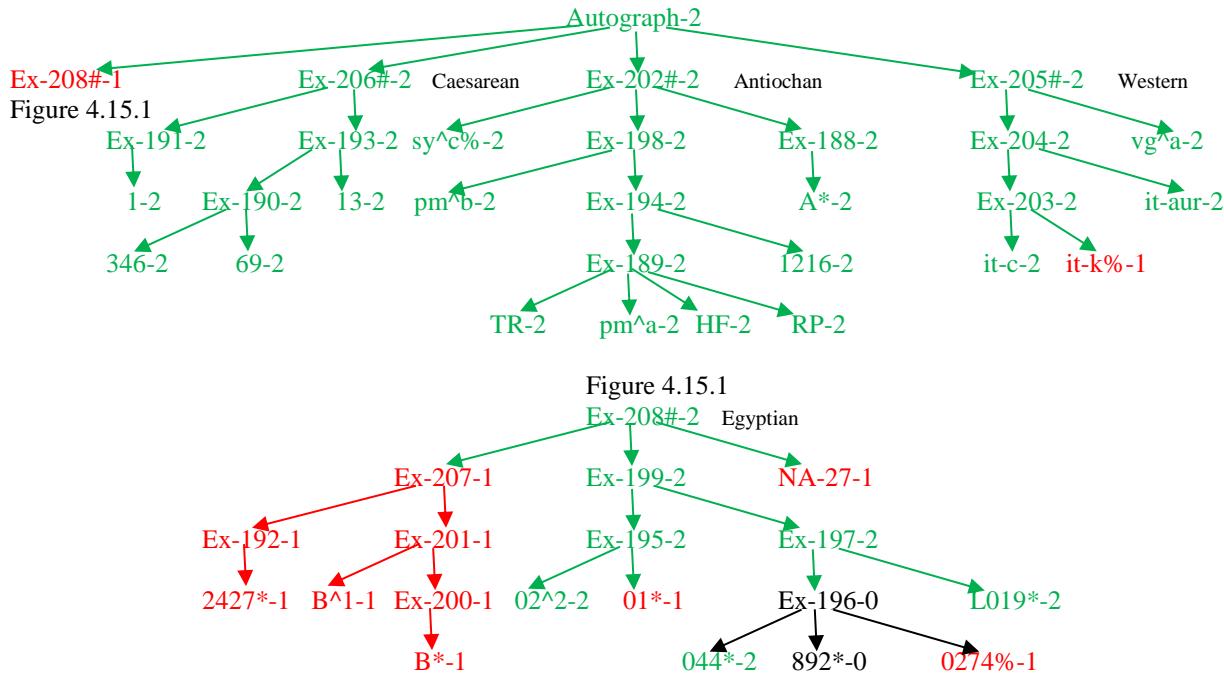

The theological question in this verse is whether Jesus said: “This kind can come forth by nothing, but by prayer and fasting,” or “This kind can come forth by nothing, but by prayer.” Two variants occur here:

(1) omit “and fasting”

(2) retain “and fasting.”

Figure 4:15 displays the distribution of these variants throughout the history of the text of Mark.

**Figure 4.15
Distribution of 9:29**

The second variant—retain “and fasting”—has the consensus of all four first-generation recensions, and so it is regarded as the autographic reading. Additionally, all the witness of the Western text tradition (Ex-205#) have the second variant except Old Latin *it^k*, and all the witnesses of the Caesarean (Ex-206#) and Antiochan (Ex-202#) text tradition have the second variant without exception. Furthermore, all the witnesses of the Egyptian text tradition have the second variant except the witnesses of the second-generation branch headed by exemplar Ex-207 which includes Codex Vaticanus (*B**); in addition, fourth-generation Codex Sinaiticus (01^{*}) has the first variant, but it was corrected to the second variant by its corrector (01²). This reading has the greatest antiquity, distribution, heredity, and persistence. The genealogical evidence overwhelmingly supports the second variant (“and fasting”); the editors of NA-27 selected the first variant strictly on the basis of internal evidence.

Tracing Any Variant

The above studies trace the history of variants of particular interest using the computer program Lachmann-10. But one may trace the history of any other desired variant using the

information in Appendices D, F, and H. For example, to trace the history of the variants at the second variation unit, follow the following steps:

Step 1: Using Appendices D and F, find the variant readings.

Appendix F says

2.1	1:1,2.1	Ex-208#;	‘τω Ἡσαΐα τῷ προφήτῃ
2.2	1:1,2.2	Ex-210\$;	2-4

That is, variant 1 is $\tau\omega$ 'Ησαΐα τω προφητη "Isaiah the prophet," initated in exemplar Ex-212#.

Variant 2 is 2-4 which means “the 2nd through the 4th words of variant 1: Ἡσαΐα τῷ προφῆτῃ “in Isaiah the prophet,” without the first article. It was initiated in virtual exemplar Ex-210\$.

Appendix D says

2.3	1:1,2,3	τοις προφηταῖς	0.75
-----	---------	----------------	------

That is, the autographic reading is the third variant (2.3), τοις προφηταῖς “in the prophets,” with a probability of 0.75 (= 75%).

Step 2: Using Appendix H, find where these variants were initiated in the history of the text.

Appendix H says

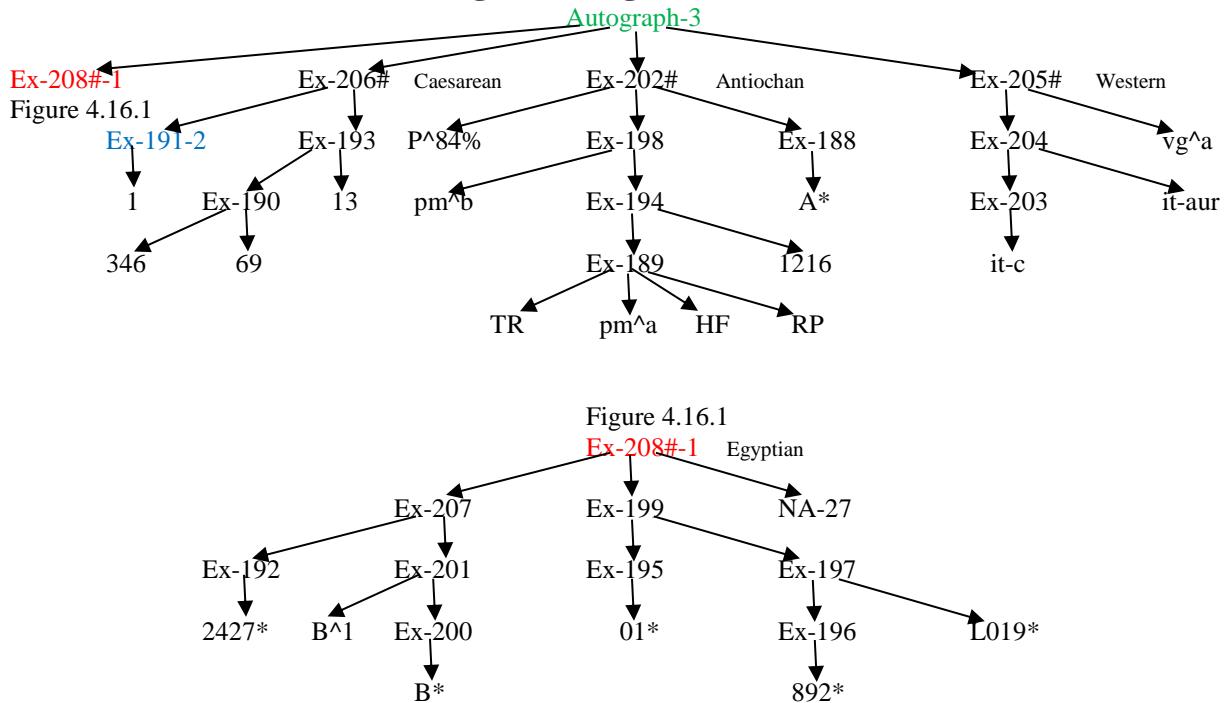

2.1	1:1,2.1	Or^b%<3>; Ex-208#<1>;
		[D05*]<4>; [D05^c]<4>; [D05^1]<4>; [D05^2]<4>; [038*]<2>; [038^c]<2>; [700*%]<5>; [700^c%]<5>; [l^844*%]<2>; [l^844^c%]<2>; [l^2211%]<5>; [it-d]<4>;
2.2	1:1,2.2	Ir%<3>; Epiph^a%<3>; [Or^a%]<4>; [Ex-191]<2>; Ex-210\$<1>;
2.3	1:1,2.3	[bo^b%]<5>; Irlat^a%<3>; Autograph;

That is, the first variant was initiated in first-generation exemplar Ex-208# and by mixture in extant third-generation church father Origen (Or^ab%). The second variant was initiated in virtual exemplar Ex-210\$, and was subsequently introduced by mixture in extant [D05*]<4>; [D05^c]<4>; [D05¹]<4>; [D05²]<4>; [038*]<2>; [038^c]<2>; [700*%]<5>; [700^c%]<5>; [I^{844*%}]<2>; [I^{844^c%}]<2>; [I^{2211%}]<5>; [it-d]<4>; Ir%<3>; Epiph^a%<3>; [Or^a%]<4>; [Ex-191]<2>; Ex-210\$<1>. The third variant was initiated in the autograph and then by mixture in third-generation church father Irenaeus (Itlat^a) and the fifth-generation Boharic translation bo^ab%.}}}

Step 3: copy figure 3.2 from chapter 3 on a separate sheet of paper, as on the next page, and write the variant numbers at the places on diagram where each variant was initiated; use green for the autographic reading (3), red for the first variant (1), and blue for the second variant (2), as illustrated in figure 4.16. Terminal witnesses in the list, like [D05*]<4> initiated by mixture may

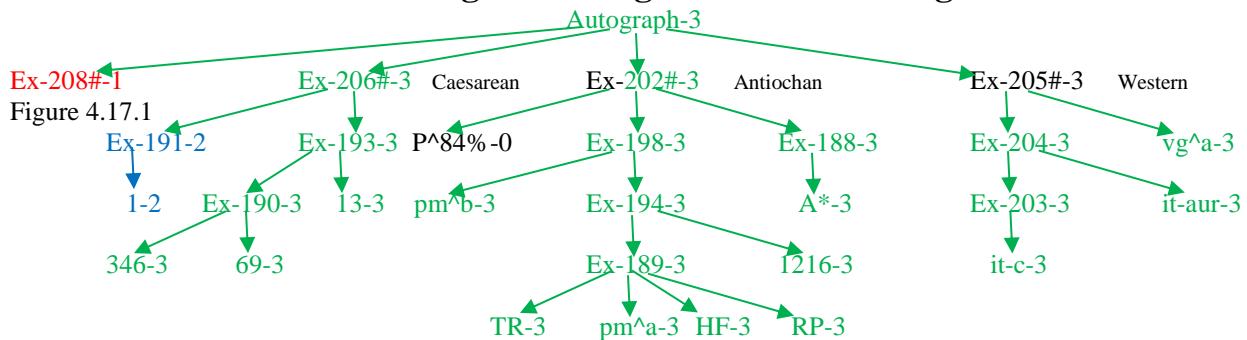

be ignored. Some witnesses do not appear on the diagram, but may be located by reference to Figure 3.1 in chapter 3 if so desired.

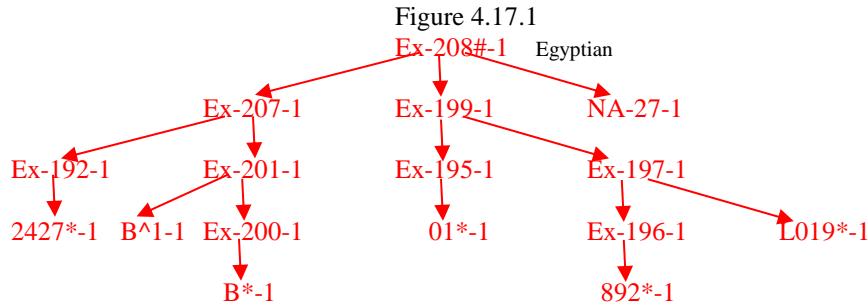

Figure 4.16
Illustrating Marking Places of Initiation

Step 4: Using its designated color, let each initiated variant extend by inheritance to all its descendants down to its terminal extant witnesses, or until changed by a new initiation, as shown in figure 4.17. Color the tree branch arrows the same color as the exemplar from which they extend. The colors display the genealogical heredity of the associated variant.

Figure 4.17
Illustrating Extending Inherited Readings

The tree diagram indicates that third variant occurs in three of the four first-generation recensions (Ex-202#, Ex-205, and Ex-206#) and so was selected as the autographic reading. The first variant occurs only in the witnesses in the Egyptian text tradition (Ex-208#). The second variant occurs in the witnesses in the sub-branch of the Caesarean text tradition headed by second-generation exemplar Ex-191 (Family-1). So the reading “Isaiah the prophet” is supported by the genealogical evidence.

Conclusion

This chapter identifies the autographic readings of the Greek text of the Gospel of Mark and how they were determined. It provides the genealogical history of each variant reading, locating where each reading originated, and describing how each reading was distributed by inheritance throughout that history. It discusses the principal recensions, locating their origin in history, and identifying their characteristic readings. It discusses doctrinally significant passages and shows that the variant readings there do not alter the orthodoxy of Christian doctrine expressed in the earliest form of the text, but appear in peripheral, inconsequential branches.

CHAPTER 5 **SUMMARY AND CONCLUSIONS**

The genealogical software and the theory it emulates were successful in reconstructing a genealogical history of the Greek text of the Gospel of Mark. The software made use of a modified version of the textual apparatus in the 27th edition of the Nestle-Aland Greek New Testament. Using index numbers to represent the variant readings in the witnesses to the text, the computer constructed a kind of genetic code for each witness based on its unique combination of variant readings. Then employing the basic principles of heredity, a relatively simple tree diagram was constructed representing the genealogical history of the text.

Heredity is the underlying principle of genealogical relationships. Because manuscripts of a text were copied from exemplars of earlier generations of the text, of necessity they have genealogical relationships. For manuscripts, quantitative affinity (consensus of variant readings) and a sibling gene, coupled with historical directionality constitute the variables for computing genealogical heredity. For variant readings, on the other hand, the domain of heredity is limited to their place of variation. There, heredity is determined by consensus among sibling sister witnesses and by what I call evidence of variant inheritance.¹ The software uses the heredity of manuscripts and the heredity of variant readings to guide the reconstruction of a historical genealogical tree diagram.

Mixture occurred when a scribe copied from more than one exemplar—a primary parent exemplar and one or more secondary exemplars. The readings of a manuscript were inherited from its primary parent exemplar or borrowed by mixture from its secondary parent exemplars; otherwise a variant was newly introduced by scribal error (either accidentally or intentionally) thus initiating a new line of heredity. A good number of witnesses had no mixture, but considerable mixture occurred in others. As it turned out, the presence of mixture does not affect the

¹ At any place in the genealogical history of a text, the evidence of a variant's inheritance is its presence in other witnesses of the same or earlier generations.

reconstruction of the genealogical tree, but it is very useful in identifying the places in genealogical history where variants were initiated, in tracing the genealogical history of variants, and in identifying recensions.

The Effect of Recensions

The genealogical theory and associated software were designed to reconstruct the genealogical history of texts where the copying process was simple, without any radical discontinuities. It was anticipated that the initiation and transmission of textual variants would be gradual and that the tree would develop three or four main branches corresponding to the commonly accepted text types. However, the theory and software also made provision for radical dislocations if they perchance had occurred. As it turned out radical dislocations did occur in the form of some major and minor recensions.² Furthermore, the most radical recensions took place in the earliest generation that genealogical relationships could be reasonably determined. This information indicates that in the earliest days of New Testament history its text was in flux and its genealogical history for that time period cannot be confidently reconstructed. These details could have resulted in disappointment except that the earliest recensions, though diverse from one another, nevertheless had sufficient consensus to identify the autographic readings.

Binary Branches

The genealogical tree diagram reconstructed by the software is often binary, that is, there are only two branches where the tree divides. Table 3.3 in Chapter 3 indicates that 12 out of 22 branches were binary. Critics of the genealogical theory claim that the methodology fails whenever there are only two branches, because no consensus can exist where there are only two alternatives. That would be true except for the principle of deferred ambiguity. In such cases, where ambiguity exists in one witness, its sister has the inherited reading.

A reading has evidence of variant inheritance when it is also found in witnesses of earlier generations. A reading will not be found in any witness dating in a generation prior to the one in which the reading first originated. Autographic readings have continual evidence of variant inheritance; all others acquire that evidence in the generation of their origin subsequent to the autograph. The evidence of variant inheritance usually decides between two equally probable readings; but where even that fails, a final appeal can be made indirectly to internal evidence. So a binary construction does not turn out to be a crucial weakness. Still, some may be concerned that the earliest history of the text is determined by such diverse witnesses. However, Table 4.4 of Chapter 4

² A recension is recognized by the introduction of a larger number of variants than normal in a witness, usually also accompanied by a larger number of secondary parent exemplars—mixture.

indicates that 94.17% of the textual decisions made in the reconstruction of the historical tree diagram were made on the basis consensus and deferred ambiguity; so diversity was not a significant deterrent. Furthermore, Table 4.5 of Chapter 4 indicates that 97.4% of the autographic readings were decided on the basis of consensus.

So What!

Someone may ask: “After all those painstaking computations, what is now known that was not already known by means of traditional textual critical methodology?” The answer should be self-evident, but for the sake of review, here is a list of the more prominent bits of knowledge the computations provide:

- (1) A rigorous construction of the genealogical history of the witnesses to the text, something that did not previously exist.
- (2) A precise account of the genealogical history of each variant reading, including its place of origin and subsequent distribution, something that did not previously exist.
- (3) The identity of the autographic readings based on an unbiased implementation of the laws of heredity, together with the mathematical probability of each one, instead of educated estimates.
- (4) An accurate description of the content and structure of the traditional text types, and their internal and external genealogical relationships, instead of educated estimates.
- (5) Hopefully a better understanding of the laws of heredity as they apply to manuscripts.

The laws of heredity have been applied to the factual evidence derived from the existing witnesses to the text of Mark. They have been applied with mathematical precision apart for human intervention and bias. Hopefully the results provide a better understanding of the history of the text. In either case, no claim is made that the derived history and the text identified as autographic are free from uncertainty. The results are dependent on the validity of the underlying theory and its software implementation. Undoubtedly the future will bring forth improved theory and implementation.

James D. Price

APPENDIX A

List of Extant Witnesses to the Greek Text of the Gospel of Mark

This appendix contains a list of the extant witnesses to the Greek text of the Gospel of Mark. For each witness it lists its name, date, language, content (references where readings exist), number of readings, and percentage of completeness. In the content column, a verse is counted as long as it has at least one extant reading.

Witness	Date	Language	Content	No. of Readings	Percent Complete
K*%	850	Greek	1:1, 6-7, 9-10, 13, 15-16, 20-21, 24-26, 31-32, 34, 36-39, 41-42, 45; 2:4, 7-15, 17-23, 26-27; 3:2-3, 5, 7-15, 17-18, 20-21, 28-29, 32-4:1; 4:4-6, 9-12, 16-19, 21-24, 32-38; 5:1-4, 9-10, 14, 17, 22-23, 26, 30-33, 36, 38-39, 43; 6:2-3, 7, 9, 14, 21, 23-24, 29-31, 33-41, 45-49, 53-7:2; 7:4, 6-8, 13, 17-19, 24-26, 28-30, 33-34, 37-8:2; 8:7, 10-12, 14-17, 21-23, 25, 27, 29, 34-36, 38-9:2; 9:7, 10-12, 15, 18-19, 23, 25-28, 30-31, 34-37, 39, 41-42, 47, 50; 10:2, 7-11, 14, 17-19, 23, 25, 27, 29-43, 46-48, 51; 11:1-2, 4-23, 25-29, 31-33; 12:12-17, 21, 25-27, 30, 32-34, 36, 38-43; 13:2-3, 7-16, 19, 21-22, 28, 32-33, 37-14:5; 14:10, 18, 21-24, 27-36, 39-49, 51, 54-66, 69-15:4; 15:7, 10, 14-20, 24-27, 32-16:16; 16:19	522	49.86%

APPENDIX B

List of the References Associated

with Each Place of Variation

This appendix contains a list of the references associated with each place of variation. The number to the left of the hyphen is the index number of the place of variation, and the numbers to the right constitute the reference. The reference indicates the chapter, verse, and ordered rank of the place of variation in that verse. For example, 10-1:6,2 indicates that the 10th place of variation occurs in chapter 1, verse 6, and is the 2th place of variation in that verse.

Appendix C

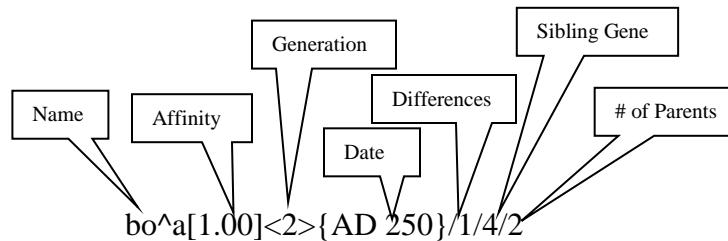

The Genealogical Tree Diagram of

The Textual History of Gospel of

Mark

This appendix contains the tree diagram of the genealogical history of the Greek text of the Gospel of Mark. The tree is displayed vertically rather than horizontally. That is, the autograph in the upper left corner with succeeding generations indented from the left progressively downward. Sibling daughter descendants are linked by vertical lines. For example, the first-generation descendants of the autograph are Ex-203#,¹ Ex-212#, and Ex-210#. Only the primary exemplars are displayed, so no mixture connections are shown. The diagram spills over onto succeeding pages, but the lower-case letters at the page breaks show where the lines from one page connect to those of the next.

The format of the information on each line is as follows: (1) the name of the witness; (2) the genealogical affinity of the witness with its primary parent exemplar, enclosed in square brackets []; (3) generation from the autograph, enclosed in angular brackets <>; (4) date, enclosed in curly brackets {}; (5) the number of variants the witness differs from its primary parent, enclosed in slant marks //; (6) The number of variants in the sibling gene; and (7) the number of parents the witness has.

¹ The names of exemplars created by the software have the prefix “Ex-” followed by a number; extant witnesses have the names provided in NA-27 as modified for compatibility with the software (discussed in Chapter Two).

Appendix D

List of Autographic Readings

For Mark

This appendix contains the list of autographic readings for the Greek text of the Gospel of Mark as determined by the genealogical method described in this book. The list contains the index of each place of variation (variation unit), the associated reference, the Greek reading at that place, and the probability that the reading is autographic.

Place of Variation	Reference	Autographic Reading	Probability
1.1	1:1,1.1	΄νιοου θεου	1
2.3	1:1,2.3	τοις προφηταις	0.75
3.1	1:1,3.1	τ ομιτ	0.5
4.1	1:1,4.1	π ομιτ	0.5
5.1	1:1,5.1	Γαύτου	1
6.1	1:1,6.1	τ ομιτ	1
7.3	1:4,1.3	2-6	0.5
8.1	1:5,1.1	΄υοπ' αύτου ἐν τω Ιορδανῃ ποταμῳ	0.5
9.1	1:6,1.1	΄και ην οο Ιωαννης	0.5

Appendix F

Places Where the Non-Autographic Variants Were Initiated

in the Textual History of Mark

Arranged in Order by Reference

This appendix lists the place in the genealogical history of the text of the Gospel of Mark where each non-original textual variant was first initiated, arranged in order by reference. For each variant, the table lists (1) the place of variation in the text where the variation occurred, (2) the associated reference, (3) the exemplar or extant witness in which the variant was initiated, and (4) the text of the variant. For example, the following line means:

100.2	2:13,1.2	01*;	εις
-------	----------	------	-----

- (1) 100.2 refers to the second variant at variation unit 100.
- (2) 2:13,1.2 is the reference where this place of variation occurs: chapter 2, verse 13, the first place of variation in this verse, the second variant there.
- (3) This variant was initiated MS 01*, Codex Sinaiticus.
- (4) The variant reads: εις = into.

Since the variant was first initiated in a manuscript, it is a singularity having no prior history.

The following line means:

2.1	1:1,2.1	Ex-208#;	τω Ἡσαία τω προφητη
-----	---------	----------	---------------------

- (1) 2.1 refers to the first variant at variation unit two.
- (2) 1:1,2.1 is the reference where this place of variation occurs: chapter 1, verse 1, the second place of variation in this verse, the first variant there.
- (3) This variant was initiated in exemplar Ex-208#, the head of the Egyptian text tradition.
- (4) The variant reads: τω Ἡσαία τω προφητη = in Isaiah the prophet.

Since the variant was first initiated in an exemplar, one can presume that the variant was inherited by all of the descendants of that exemplar (Ex-208#) unless otherwise altered in one of its subsequent branches.

The following line means:

3.2	1:1,3.2	Ex-215\$;	εγω
-----	---------	-----------	-----

- (1) 3.2 refers to the second variant at variation unit three.
- (2) 1:1,3.2 is the reference where this place of variation occurs: chapter 1, verse 1, the third place of variation in this verse, the second variant there.
- (3) This variant was initiated in exemplar Ex-215\$, a virtual exemplar, a source of mixture.
- (4) The variant reads: εγω = I.

**List of Places Where Variants Were Initiated in the Genealogical History
Arranged in order by Reference
Total = 1636**

Appendix G

Places Where the Non-Autographic Variants Were Initiated

in the Textual History of Mark

Arranged in Order by Witness

This appendix lists the place in the genealogical history of the text of the Gospel of Mark where each non-original textual variant was first initiated, arranged in order by witness. For each witness, the table lists (1) the exemplar or extant witness in which the variant was initiated, (2) the place of variation in the text where the variation occurred, (3) the associated reference, (4) the text of the variant. For example, the following line means:

P^45%	308.2	6:21,1.2	$\epsilon\nu$
-------	-------	----------	---------------

- (1) This variant was initiated in MS P^45%, a fragment.
- (2) 308.2 refers to the second variant at variation unit 308.
- (3) 6:21,1.2 is the reference where this place of variation occurs: chapter 6, verse 21, the first place of variation in this verse, the second variant there.
- (4) The variant reads: $\epsilon\nu$ = in.

Since the variant was first initiated in a manuscript, it a singularity having no prior history.

The following line means:

Ex-188	17.3	1:9,2.3	<i>Nαζαρατ</i>
--------	------	---------	----------------

- (1) This variant was initiated in exemplar Ex-188.
- (2) 17.3 refers to the third variant at variation unit 17.
- (3) 1:9,2.3 is the reference where this place of variation occurs: chapter 1, verse 9, the second place of variation in this verse, the third variant there.
- (4) The variant reads: *Nαζαρατ* = Nazareth.

Since the variant was first initiated in an exemplar, one can presume that the variant was inherited by all of the descendants of that exemplar (Ex-188) unless otherwise altered in one of its subsequent branches.

Appendix H

Every Place Where a Variant is Initiated

in the Textual History of Mark

Arranged in Order by Reference

Total = 2745

This appendix lists every place a variant is introduced into the textual history of Mark either initially or later by mixture. The information is arranged in order by reference as follows: (1) place of variation, (2) reference, (3) witness(es) where variant was initiated. Those witnesses enclosed in square brackets [] are places where the variant was introduced by mixture; those not enclosed are where the variant first originated. The number enclosed in <> is the generation of the preceding witness. For example, the following line means:

1.1	1:1,1.1	[33*]<5>; [33^c]<5>; [sa^a%]<5>; [sa^c%]<5>; [bo^b%]<5>; Autograph;
-----	---------	---

- (1) 1.1 refers to the first variant in variation unit 1.
- (2) 1:1,1.1 is the reference where this place of variation occurs: chapter 1, verse 1, the first place of variation in this verse, the first variant there.
- (3) Autograph means that the variant was initiated in the autograph and then by mixture in [33*]<5>; [33^c]<5>; [sa^a%]<5>; [sa^c%]<5>; [bo^b%]<5>.

Since the variant was first initiated in an exemplar, one can presume that the variant was inherited by all of the descendants of the autograph unless otherwise altered in one of its subsequent branches.

The following line means:

1.2	1:1,1.2	[01*]<4>; [038*]<2>; [038^c]<2>; [28*%]<5>; [28^c%]<5>; [l^2211%]<5>; [sa^b%]<5>; [Or^a%]<4>; Ex-210\$<1>;
-----	---------	--

- (1) 1.2 refers to the second variant in variation unit 1.
- (2) 1:1,1.2 is the reference where this place of variation occurs: chapter 1, verse 1, the first place of variation in this verse, the second variant there.
- (3) The variant was first initiated in first-generation virtual exemplar Ex-210\$, and subsequently initiated by mixture from Ex-210\$ into [01*]<4>; [038*]<2>; [038^c]<2>; [28*%]<5>; [28^c%]<5>; [l^2211%]<5>; [sa^b%]<5>; [Or^a%]<4>.

Since the variant was first initiated in a virtual exemplar, one may safely assume that the variant randomly happened by scribal accident and not by actual mixture in a context of actual genealogical descent.

The following line means:

1.4	1:1,1.4	1241*%<3>;
-----	---------	------------

- (1) 1.4 refers to the fourth variant in variation unit 1.
- (2) 1:1,1.4 is the reference where this place of variation occurs: chapter 1, verse 1, the first place of variation in this verse, the fourth variant there.

- (3) The variant was first initiated only in third-generation extant fragment 1241%. This is a singularity; it has no heredity.

Place of Variation	Reference	Places Variant is Introduced
1.1	1:1,1.1	[33*]<5>; [33^c]<5>; [sa^a%]<5>; [sa^c%]<5>; [bo^b%]<5>; Autograph;

Glossary of Terms

Boldfaced words in the following definitions refer to other terms defined in this glossary.

Autograph: The original document written by the hand of its author or by his secretary to whom he dictated its text.

Autographic Text: The words originally written in an original document.

Commonness: A measure of the degree to which **witnesses** to a given text share the same value of a genetic characteristic of the text. See Commonness of Place of Variation and Commonness of Reading.

Commonness of Place of Variation [CP]: The degree to which two **witnesses** to a given text have the same **places of variation** regardless of the **readings** at those places—that is, they share a common portion of the text. The Commonness of Place of Variation of A with B [$CP(A,B)$] = the number of **places of variation** where both A and B have a **reading**, where A and B are **witnesses** to the same text. This measure is important for dealing with fragmentary **witnesses**. Two **witnesses** that both have a complete text have 100% Commonness of Place of Variation.

Commonness of Readings [CR]: A measure of the degree to which two **witnesses** to a text have the same **readings**. It is calculated as follows: The Commonness of Readings of A with B [$CR(A,B)$] = the number of **places of variation** where both A and B have the same **reading**, where A and B are **witnesses** to the same text.

Completeness [Cmp]: A measure of how much of a text a particular **witness** contains. It is calculated as follows: The Completeness of A [$Cmp(A)$] = (the number of **places of variation** A has of the text) ÷ (the total number of **places of variation** in the text), where A is a **witness** to the text. This measure is important for dealing with fragmentary **witnesses**.

Complexity: In the context of a branch of the genealogical tree, complexity is defined as the number of **exemplars** in the branch plus the number of new **variant readings** initiated in the branch.

Content: A list of the **places of variation** a **witness** contains, expressed in terms of references (chapter and verse)—that is, that portion of the text the **witness** contains.

Exemplar: A **witness** from which other **witnesses** have been copied. The software creates exemplars in the process of reconstructing the genealogical history of the text.

Fragment: A **witness** that is missing part of its text due to damage or deterioration.

Genetic Affinity [GA]: A measure of the degree to which **witnesses** to a given text are genetically related. It is calculated as follows: Affinity of A to B [$GA(A,B)$] = (the number of **places of variation** where both A and B have any **reading** [$CP(A,B)$] – the number of **places of variation** where A and B differ [$GD(A,B)$]) ÷ (the number of **places of variation** where both A and B have any **reading** [$CP(A,B)$]), where A and B are **witnesses** to the same text. The genetic affinity of A to B has the same value as the genetic affinity of B to A. Identical witnesses have 100% affinity.

Genetic Distance [GD]: The genetic distance between two **witnesses** is defined as the number of **places of variation** where the two witnesses have different **readings**.

Genetic Dominance: A **reading** has genetic dominance as long as it is inherited by the **descendants** of the exemplar in which it occurs. It loses genetic dominance at any place in the genetic history of the exemplar in which it occurs where an alternate reading replaces it.

Heredity: That characteristic of a **reading** correctly copied into a daughter **witness** of the **exemplar** in which the reading is found.

Inheritance: That characteristic of a **reading** correctly copied from the parent **exemplar** of the **witness** in which the reading is found.

Majuscule: A **manuscript** written in all capital letters.

Manuscript: A handwritten copy of a text made from an earlier copy (**exemplar**). The term is sometimes used as a synonym of **witness**.

Minuscule: A **manuscript** written in longhand characters.

Papyri: **Manuscripts** copied on paper made from papyrus. They are usually rather early, but mostly fragmentary.

Parent Exemplar: The **manuscript** from which another **manuscript** was directly copied.

Place of Variation: A place in a text where the **witnesses** to the text have different **readings**. In the data base, each place of variation is assigned a sequential index number in order to distinguish them from one another; each one also has assigned to it the chapter and verse where it occurs in the text.

Primary Parent: The **parent exemplar** of a **witness** from which it derives its place in the tree diagram that maps the genealogical history of the text.

Reading: At each **place of variation** in a text, the **witnesses** have different words. The words contained in a given witness at a particular **place of variation** constitute the *reading* of that witness at that place. The reading may be a word, phrase, sentence, verse, etc., or nothing at all (an omission).

Recension: A recension is understood to be a **witness** derived from multiple sources and having a significant number of variations from its **primary parent exemplar**. A recension is a deliberate alteration of a text tradition for the purpose of correction or improvement. A recension occurred when a Christian community noted that their Bibles (**manuscripts**) had different **readings**, and there was an attempt to recover the readings of the **autograph**. This likely took place under the authority of the leadership of the community and was carried out by competent scribes. It is possible that in some recensions some of the corrections were made to strengthen the doctrines of the community.

Secondary Descendant: A descendant of a **secondary parent** functioning as a source of mixture for the given descendant.

Secondary Parent: A **parent exemplar** of a witness other than the **Primary Parent Exemplar**. Secondary parents are the sources of mixture for their secondary descendants.

Siblings: Sister first generation descendants of the same **exemplar**.

Uncial: A **manuscript** written in all capital letters.

Variant Heredity [VH]: The characteristic of variant readings that provides a measure of the likelihood that a given reading in a particular witness A has been inherited from another

witness B in an earlier generation. It is quantified as the **genetic distance** between witness A containing the given reading and another witness B in an earlier generation containing the same reading. The witness B having the least genetic distance from witness A is the closest near relative of A with respect to the given reading. A reading has no variant heredity until after it is first initiated somewhere in the genealogical history of the text.

Variant Reading: See *Reading*.

Variation Unit: See *Place of Variation*.

Version: A translation of a document into a language other than that of the original document itself.

Virtual Exemplar: An **exemplar** created by the software to account for mixture in a reconstructed branch of the genealogical tree. It is a descendant of one of the exemplars in the branch, but it has no primary descendants, only secondary ones.

Witness: A **manuscript** of a document in its original language, or a translation of that document into another language, or a quotation of the text of a **manuscript** or translation.
